**BITSAT August 5 Memory-Based Questions PDF 2 – CollegeDekho Exclusive**

- What is the magnetic moment of Ti2+(atomic number=22)
- the most steam volatile compound given below ans-(o-nitro phenol)
- The distance between places of the capacitor is 1mm and the electric field is 2000N/C. What is the electric potential between the plates?
- Which element is deviated by magnetic field. Nico4 nicn4 feco32
- Integration dx/a+bcosx when a=b
- The distance between places of capacitor is 1mm and the electric field is 2000N/C. What is the electric potential between the plates?
- Which of the following is the sweetest artificial sweetener among the following?
- 2A+3B→3C+4D Expression of rate of reaction (chemical kinetics)
- A circle passes through (1,2), (4,-3) and (6,-5) its centre is
- Coffeicient of $x^{10}$ in e^2$x^5$
- e^-x/2 is strictly increasing in
- Which of the following inert gas is used as cryogenic agent?
- Why Only Xe can form compounds with Fluorine among noble gases?
- Value of x for which (2 + isinx)/(3 + 2isinx) is purely imaginary
- 2,3,6,18,?,1944 find ?
