POST GRADUATE COMMON ENTRANCE TEST - 2018

PS	M.E./M.Tech./ M.Arch./Courses offered by VTU/UVCE/		POLYMER SCIENCE AND TECHNOLOGY		
MAXIMUM MARKS	TOTAL DURATION		TIME		301
100	150 Minutes		2.30 p.m. to 4.30 p.m.		
MAXIMUM TIME FO	DR MENTION Y	OUR P	GCET NUMBE	R	9
120 Minutes					

DOs:

- 1. Candidate must verify that the PGCET number and Name printed on the OMR Answer Sheet is tallying with the PGCET number and Name printed on the Admission Ticket. Discrepancy if any, report to invigilator. This question booklet is issued to you by the invigilator after the 2nd bell i.e., after 02.25 p.m.
- The Version Code of this Question Booklet should be entered on the OMR Answer Sheet and the respective circle should also be shaded completely.
- The Version Code and Serial Number of this question booklet should be entered on the Nominal Roll without any
- Compulsorily sign at the bottom portion of the OMR answer sheet in the space provided.

DON'Ts:

.

- THE TIMING AND MARKS PRINTED ON THE OMR ANSWER SHEET SHOULD NOT BE DAMAGED / MUTILATED / SPOILED.
- 2. The 3rd Bell rings at 2.30 p.m., till then;
 - Do not remove the seal present on the right hand side of this question booklet.
 - Do not look inside this question booklet.
 - Do not start answering on the OMR answer sheet.

IMPORTANT INSTRUCTIONS TO CANDIDATES

- 1. This question booklet contains 75 (items) questions and each question will have one statement and four answers. (Four different options / responses.)
- After the 3rd Bell is rung at 2.30 p.m., remove the paper seal on the right hand side of this question booklet and check that this booklet does not have any unprinted or torn or missing pages or items etc., if so, get it replaced by a complete test booklet. Read each item and start answering on the OMR answer sheet.
- 3. During the subsequent 120 minutes:
 - Read each question (item) carefully.
 - Choose one correct answer from out of the four available responses (options / choices) given under each question / item. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose only one response for each item.
 - Completely darken / shade the relevant circle with a blue or black ink ballpoint pen against the question number on the OMR answer sheet.

ಸರಿಯಾದ ಕ್ರಮ	ತಪ್ಪು ಕ್ರಮಗಳು WRONG METHODS
CORRECT METHOD	R B C D A B C Ø A O D
A • © D	

- 4. Use the space provided on each page of the question booklet for Rough Work. Do not use the OMR answer sheet for the
- After the last bell is rung at 4.30 p.m., stop marking on the OMR answer sheet and affix your left hand thumb impression on the OMR answer sheet as per the instructions.
- Hand over the OMR answer sheet to the room invigilator as it is.
- After separating the top sheet (KEA Copy), the invigilator will return the bottom sheet replica (candidate's copy) to you to carry home for self-evaluation.
- Preserve the replica of the OMR answer sheet for a minimum period of ONE year.
- Only Non-programmable calculators are allowed.

Marks Distribution

PART - 1:50 QUESTIONS CARRY ONE MARK EACH (1 TO 50) PART - 2: 25 QUESTIONS CARRY TWO MARKS EACH (51 TO 75)

[P.T.O. .

YM KON

PART - 1

1.	The process of heat transfer from one par motion of the particle, is called as	ticle	of the body to another without the actual
	(A) Conduction (B) Convection	(C)	Radiation (D) Distillation
2.	If the rate of heat transfer is constant, it is	s kno	own as
	(A) Steady state heat transfer	(B)	Unsteady state heat transfer
	(C) Uniform heat transfer	(D)	Non-uniform heat transfer
3.	Multiple pass heat exchanger is used to		
	(A) Increase rate of heat transfer	(B)	Increase pressure drop
	(C) Decrease pressure drop	(D)	Decrease vibrations
4.	Raoult's law is applicable to		
	(A) Non-volatile solute	(B)	Real solution
	(C) Ideal solution	(D)	Mixture of water and alcohol
5.	A mixture of acetone and chloroform can	be s	eparated by
	(A) Flash distillation	(B)	Vacuum distillation
	(C) Steam distillation	(D)	Azeotropic distillation
6.	Flash distillation is used at a large scale	in	of dust to film with their services.
	(A) Phenol-formaldehyde resin synthesis	s (B)	Petroleum refining
	(C) Ammonia synthesis	(D)	Sulphuric acid synthesis
7.	The total entropy change for a system ar process is	nd its	surroundings increases if the
	(A) Endothermic	(B)	Irreversible
	(C) Exothermic	(D)	Reversible
8.	Entropy change of a system is zero in		
	(A) Reversible process	(B)	Isothermal process
	(C) Adiabatic process	(D)	Reversible adiabatic process

9.	For a process to be spontaneous in isolat (A) Zero (B) Negative		ystem, entropy should be Constant (D) P	ositive
10.	In PV diagram of isotherms as given by edincreasing V, pressure decreases	quati	on of state, for the isothern	n T > T _c , with
	(A) Slowly (B) Rapidly	(C)	Monotonically (D) To	o zero
11.	In a reversible adiabatic compression			
	(A) Temperature remains constant	(B)	Heating takes place	
	(C) Pressure remains constant	(D)	Cooling takes place	
12.	The enthalpy (H) of any system is defined	d by		
	(A) $H = W - PV$ (B) $H = V + PW$	150	H = W + PV (D) H	= W + RT
13.	In a turbulent flow in a pipe			
	(A) Raynolds number is greater than 10,	,000		
	(B) Fluid particles move in straight lines			
	(C) Head loss varies linearly with flow ra	te		
	(D) Shear stress varies linearly with radi	us		
14.	For measuring flow by a venturimeter, it s	shou	ld be installed in	
	(A) In any direction and in any location	(B)	Horizontal line	
	(C) Inclined line with upward flow	(D)	Vertical line	
15.	Pitot tube is used to measure the velocity	/ hea	d of	
	(A) Laminar flow (B) Flowing fluid	(C)	Still fluid (D) T	urbulent flow
16.	Capillarity is due to			
	(A) Cohesion	(B)	Adhesion	
	(C) Adhesion and cohesion	(D)	Gravity	
17.	Friction drag is generally larger than the	pres		
	(A) Flow past a cylinder		Flow past a sphere	
	(C) Flow past an airfoil		Flow past a thin sheet	

18.	A large Raynold	number is related to						
	(A) Smooth and stream line flow			(B) Highly turbulent flow				
	(C) Laminar flow		(D) Steady flow					
10	SI unit of mass flo	uv io						
19.			(0)	2/22 2	(D) Ib Im a			
	(A) kg/m ² .s	(B) 1/m ² .h	(0)	g/m ² .s	(D) /b/m.s			
20.	A sample of sea weight percentag		10 ³ ppm	solids. The c	oncentration of solids in			
	(A) 0.3%	(B) 0.35%	(C)	35%	(D) 3.5%			
21.	The average mol	ecular weight of air a	assuming	79% of N ₂ 8	and 21% of oxygen is			
	(A) 18.4	(B) 23.6		28.8	(D) 10.6			
22. Mole fraction of methanol in a mixture 13 moles of methanol is		e of 7 mo	oles of water,	10 moles of ethanol and				
	(A) 0.24	(B) 0.43	(C)	0.32	(D) 0.86			
23.	If the repeat units are joined in a 3-dimensional array, the resulting polymer will be							
	(A) Linear polyn	(B)	Branched po	olymer				
	(C) Cross linked	polymer	(D)	Block copoly	ymer			
24.	Which of the follo	owing is optically tran	sparent	engineering	polymer?			
	(A) LDPE		(B)	(B) Nylon 66				
	(C) TiO ₂ filled P	MMA .	(D)	Poly carbon	ate			
25.	Polymers are als	o known as						
	(A) Sub-macron	nolecules	(B)	Macromolec	cules			
	(C) Oligomers		(D)	Micromolec	ules			
26.	Block copolymer	s are generally produ	uced by					
	(A) Free radical	polymerization	(B)	Anionic poly	merization			
	(C) Cationic poly	ymerization	(D)	Coordination	n polymerization			

27.	Coordination polymerization is also known (A) Insertion polymerization (B) Poly condensation polymerization (C) Interfacial polymerization (D) Poly addition polymerization	n as		
28.	Mark-Houwink equation is related to the f	ollow	ving physical properties	
	(A) Melting	(B)	Crystallinity	
	(C) Elasticity	(D)	Viscosity	
29.	The most chemically inert polymer, used	in no	n-sticking kitchen ware is	
	(A) Melamine resin (B) Teflon	(C)	PC (D) PVC	
30.	The chain carrier in case of cationic polyr	neriz	ation are	
	(A) Carbonium ion	(B)	Hydroxyl ion	
	(C) Carbanion	(D)	Carbonyl ions	
31.	The technique which produces polymers	of hi	ghest purity is	
			Solution polymerization	
	(C) Bulk polymerization	(D)	Suspension polymerization	
32.	is an example for free rac	lical	initiator.	
	(A) AIBN (B) Lewis acid	(C)	DDM (D) TMTD	
33.	Disposable cups are produced by			
	(A) Extrusion	(B)	Injection molding	
	(C) Compression molding	(D)	Thermoforming	
34.	Example for open-molding process is			
	(A) Extrusion	(B)	Injection molding	
	(C) Hand lay up	(D)	Pressure bag molding	
35.	The kinetic chain length of a polymer is e	xpre	ssed as	*
	(A) R_p/R_i (B) R_i/R_p	(C)	R_t/R_p (D) R_i/R_t	

36.	In ca	ationic polymerization, the overall po	lymer	rization rate is directly proportional to					
	(A)	First power of monomer concentration	on						
	(B) Second power of monomer concentration								
	(C)	Third power of monomer concentrat	ion						
	(D)	Not related to monomer concentration	on						
37.	Nylo	on 6 is prepared by							
	(A)	Condensation polymerization							
	(B)	Ring opening polymerization							
	(C)	Addition polymerization							
	(D)	Poly addition polymerization							
38.	The	role of sodium chloride in emulsion	oolym	nerization is					
	(A)	Initiator	(B)	Emulsifier					
	(C)	Coagulant	(D)	Suspending agent					
39.	Mel	t flow index of a polymer is inversely	propo	ortional to					
	(A)	Density	(B)	Molecular weight					
	(C)	Crystallinity	(D)	Tacticity					
40.	The	functionality of acetylene monomer	is	TIBLE TO THE TIBLE					
	(A)	Two	(B)	Three					
	(C)	Four	(D)	Five					
41.	Poly	yether Ether Ketone (PEEK) is a							
	(A)	Homopolymer	(B)	Heteropolymer					
	(C)	Copolymer	(D)	Crystalline polymer					
		基本设置的基本							
42.		A can be used to measure							
		Thermal stability							
		Tg							
	(C)	Crystallinity							
	(D)	Degree of polymerization		THE RESERVE OF THE PROPERTY OF THE PARTY OF					

43.	HDPE is produced by	
	(A) Low pressure process	(B) Unipol process
	(C) Solid phase polymerization	(D) Photo polymerization
44.	Polystyrene produced from suspension po	olymerization is in the form of
	(A) Solution	(B) Latex
	(C) Beads	(D) Powder
15	Blow molding process is used to produce	
45.		
	(A) Sheets	(B) Rods
	(C) Fibers	(D) Bottles
46.	Long fiber reinforced product obtained by	
	(A) Compression molding	(B) Blow molding
	(C) Pultrusion	(D) Vacuum bag molding
47.	In thermoforming process, preheating of	a sheet is usually carried out by
	(A) Infra red radient electrical heater	· (dkmest 1.45)
	(B) Hot air	
	(B) Hot air	
	(B) Hot air(C) Steam(D) Microwave irradiation	
48	(C) Steam (D) Microwave irradiation	
48.	(C) Steam(D) Microwave irradiationCompounding of thermoplastics can be compounded.	arried out using
48.	(C) Steam(D) Microwave irradiationCompounding of thermoplastics can be c(A) Extrusion	arried out using (B) Blow molding
48.	(C) Steam(D) Microwave irradiationCompounding of thermoplastics can be compounded.	arried out using
	(C) Steam(D) Microwave irradiationCompounding of thermoplastics can be c(A) Extrusion	arried out using (B) Blow molding (D) Compression molding
	 (C) Steam (D) Microwave irradiation Compounding of thermoplastics can be compounded in the compounding of the compoundi	arried out using (B) Blow molding (D) Compression molding
	 (C) Steam (D) Microwave irradiation Compounding of thermoplastics can be compounded of the compounding of the compounding of the compounding of the compounding (C) Injection molding Which of the following polymer is moistured. 	arried out using (B) Blow molding (D) Compression molding re sensitive ?
49.	 (C) Steam (D) Microwave irradiation Compounding of thermoplastics can be compounding of thermoplastics can be compounded. (A) Extrusion (C) Injection molding Which of the following polymer is moistured. (A) Polyethylene (C) Polypropylene 	arried out using (B) Blow molding (D) Compression molding e sensitive ? (B) Polyamide (D) Polybutadiene
49.	 (C) Steam (D) Microwave irradiation Compounding of thermoplastics can be of (A) Extrusion (C) Injection molding Which of the following polymer is moisture (A) Polyethylene (C) Polypropylene is an example for inorganic polymer 	arried out using (B) Blow molding (D) Compression molding re sensitive ? (B) Polyamide (D) Polybutadiene olymer.
49.	 (C) Steam (D) Microwave irradiation Compounding of thermoplastics can be compounding of thermoplastics can be compounding of thermoplastics can be compounding. (A) Extrusion (C) Injection molding Which of the following polymer is moisture. (A) Polyethylene (B) Polypropylene (C) Polypropylene (D) Injection molding (E) Polypropylene (E) Polypropylene (E) Polypropylene (E) Natural rubber 	arried out using (B) Blow molding (D) Compression molding re sensitive? (B) Polyamide (D) Polybutadiene olymer. (B) Polyester resin
49.	 (C) Steam (D) Microwave irradiation Compounding of thermoplastics can be of (A) Extrusion (C) Injection molding Which of the following polymer is moisture (A) Polyethylene (C) Polypropylene is an example for inorganic polymer 	arried out using (B) Blow molding (D) Compression molding re sensitive ? (B) Polyamide (D) Polybutadiene olymer.

PART - 2

51.	In pipes larger than 25 mm, carrying wa	ter, the laminar flow
	(A) Very often exists	(B) Generally exists
	(C) Rarely exists	(D) Unpredicted
52.	Bernoulli's theorem deals with conversion	on of
	(A) Mass (B) Force	(C) Momentum (D) Energy
53.	If the Mach number of a flow is 3, the flo	
	(A) Super super sonic	(B) Super sonic
	(C) Sonic	(D) Subsonic
54.	If the Froude number in open channel fle	ow is equal to 1.0, the flow is
	(A) Laminar flow (B) Turbulent flow	w (C) Shooting flow (D) Streaming flow
55.		mics, the change in internal energy (Δ E) ork (W) and involving absorption of heat (Q) is
	(A) $\Delta E = Q - W$	(B) $\Delta E = Q + W$
	(C) $\Delta E = \Delta Q + \Delta W$	(D) $\Delta E = \Delta Q - \Delta W$
56.	When a gas expands spontaneously fro pressure, then the entropy of the gas	m a region of high pressure to a region of low
	(A) Remains constant	(B) Decreases
	(C) Increases	(D) Is zero
57.	During isothermal expansion of an ideal	I gas, its
	(A) Internal energy increases	(B) Enthalpy remains unaffected
	(C) Enthalpy decreases	(D) Enthalpy reduces to zero
58.	If the viscosity of air is 24.5×10^{-6} NS/m ² thermal conductivity is 0.12 W/mK. Then	and its specific heat capacity is 1 kJ/kg.K and Prandtl number value will be
	(A) 0.30	(B) 0.15
	(C) 0.20	(D) 0.25
