## Section A: Q. 1 - Q. 10 Carry ONE mark each.

| Q. 1 | When the supply curve $S_{x}$ is backward bending and the demand curve $D_{x}$ is downward sloping as shown in the figure, there are two equilibria $M$ and $N$, respectively. Which of the following statements is CORRECT? |
| :---: | :---: |
| (A) | Only $M$ is stable equilibrium |
| (B) | Only $N$ is stable equilibrium |
| (C) | Both $M$ and $N$ are stable equilibria |
| (D) | Both $M$ and $N$ are unstable equilibria |
|  |  |

| Q. 2 | Which of the following deficits indicates the true current fiscal position of the Indian |
| :--- | :--- |
| Economy? |  |
| (A) | Revenue Deficit |
| (C) | Current Account Deficit Deficit |
| (D) | Primary Deficit |
|  |  |

| Q.3 | Which of the following CORRECTLY defines the relationship between the variances of <br> sample means for simple random samples drawn with and without replacement from a <br> normal population? |
| :--- | :--- |
| (A) | $\frac{\sigma^{2}}{n}>\frac{\sigma^{2}}{n}\left(\frac{N-n}{N-1}\right)$ |
| (B) | $\frac{\sigma^{2}}{n} \leq \frac{\sigma^{2}}{n}\left(\frac{N-n}{N-1}\right)$ |
| (C) | $\frac{\sigma^{2}}{n}<\frac{\sigma^{2}}{n}\left(\frac{N-n}{N-1}\right)$ |
|  | $\frac{\sigma^{2}}{n}=\frac{\sigma^{2}}{n}\left(\frac{N-n}{N-1}\right)$ |
|  |  |

| Q. 4 | Suppose that one million unemployed persons in a country are receiving Rs. 6000 per <br> month per person as an unemployment allowance. If the government, instead of paying <br> unemployment allowance, hires all of them at the same amount (Rs. 6000 per month per <br> person) and engages them in digging the pits and filling the same pits. What will be the <br> effect on GDP? |
| ---: | :--- |
| (A) | No effect on GDP |
| (B) | GDP will rise. |
| (D) | GDP will fall. |
|  | The effect on GDP will be uncertain. |

| Q. 5 | Which amendments to the constitution have provided constitutional status to the rural and <br> urban local bodies in India? |
| ---: | :--- |
| (A) | $80^{\text {th }}$ and $81^{\text {st }}$ Amendments |
| (B) | $73^{\text {rd }}$ and $74^{\text {th }}$ Amendments |
| (D) | $71^{\text {nd }}$ and $93^{\text {rd }}$ Amendments $72^{\text {nd }}$ Amendments |
|  |  |

| Q. 6 | Let W be a subspace of a vector space $\mathfrak{R}^{3}$. Then, which of the following sets of vectors <br> forms a basis of W? |
| :--- | :--- |
| (A) | $(1,2,1)$ and $(1,-2,5)$ |
| (B) | $(1,3,2),(1,-1,0),(4,-1,0)$ and $(3,1,-3)$ |
| (D) | $(1,-2,1,1),(1,2,3)$ and $(2,-1,1)$ |

| Q.7 | From the following, who first examined the close negative relationship between the <br> unemployment rate and the output ratio? |
| ---: | :--- |
| (A) | Alban W. Phillips |
| (B) | James Tobin |
| (C) | Arthur M. Okun |
| (D) | Robert M. Solow |
| Q.8 | In the hypothesis testing, which of the following defines the size of power of the test? |
| (A) | $1-$ (Probability of accepting null hypothesis when it is true) |
| (B) | $1-$ (Probability of rejectingnull hypothesis when it is true) |
| (D) | $1+$ (Probability of accepting null hypothesis when it is false) |
|  | 1 |

| Q.9 | Which of the following is NOT a postulate of the Classical Model of full-employment <br> equilibrium? |
| ---: | :--- |
| (A) | Wage-Price flexibility |
| (B) | Perfect information about the market |
| (D) | The price level moves proportionately with the quantity of money. |
| Q.10 | A long-run cost function for a product exhibits economies of scale if |
| (A) | average cost of production increases when the output increases. |
| (B) | the production function has decreasing returns to scale. |
| (C) | average cost of production falls as the output increases. |
| average cost of production remains constant as the output increases. |  |
| (D) |  |

Section A: Q. 11 - Q. 30 Carry TWO marks each.

| Q. 11 | Let $x^{3}+3 y^{2}=4$ for all $x, y \in \mathfrak{R}, y^{\prime}=\frac{d y}{d x}$ and $y^{\prime \prime}=\frac{d^{2} y}{d x^{2}}$. Then |
| ---: | :--- |
| (A) | $x^{2}+y y^{\prime \prime}+\left(y^{\prime}\right)^{2}=0$ |
| (B) | $2 x+y^{\prime \prime}+2\left(y^{\prime}\right)^{2}=0$ |
| (D) | $x+\left(y^{\prime}\right)^{2}=0$ |
|  |  |

| Q.13 | Let $f:[0, \infty) \rightarrow \mathfrak{R}$ be a function defined by $f(x)=\frac{x+1}{x+2}$ for all $x \in \mathfrak{R}$. Then $f$ is |
| ---: | :--- |
| (A) | one-one and onto. |
| (C) | one-one but not onto. |
| (D) | neither one-one nor onto. |
|  |  |

| Q.14 | An economy is characterized by the Solow model, with the production function $y=\sqrt{k}$, <br> where $y$ is output per worker and $k$ is capital per worker. The steady-state level of output <br> per worker is $y^{s s}=A^{1 /(1-\alpha)}\left(\frac{\gamma}{\delta}\right)^{\alpha /(1-\alpha)}$, where $A, \gamma, \delta$ and $\alpha$ denote productivity, <br> share of output invested (in $\%)$, depreciation rate (in $\%$ ) and capital's share in income (in <br> fraction), respectively. Suppose that $A=1, k=400, \gamma=50 \%, \delta=5 \%$ and $\alpha=1 / 2$. <br> Then the current output, using the above information, is |
| ---: | :--- |
| (A) | above the steady-state level of output per worker. |
| (B) | at the steady-state level of output per worker. |
| (D) | at the Golden Rule level. |
|  |  |

| Q.15 | Which of the following is NOT related to the structural adjustment programmes <br> implemented in India after 1991? |
| :--- | :--- |
| (A) | Deregulation |
| (C) | Fiscal austerity |
| (D) | Reduction of subsidies |
|  |  |

| Q.16 | Let a second order difference equation be |
| ---: | :--- |
| (A) | $\left(1+n_{n+2}+4 y_{n}=4 y_{n+1}, \quad n=2,3,4, \ldots, y_{0}=1, y_{1}=4\right.$ |
| (B) | $(1+n) 2^{n}$ |
| (D) | $\left(1+\frac{1}{n}\right) 2^{n}$ |

| Q.17 | Suppose that two random samples of sizes $n_{1}$ and $n_{2}$ are selected without replacement <br> from two binomial populations with means $\mu_{1}=n_{1} p_{1}, \mu_{2}=n_{2} p_{2}$ and variances <br> $\sigma_{1}^{2}=n_{1} p_{1} q_{1}, \quad \sigma_{2}^{2}=n_{2} p_{2} q_{2}$, respectively. Let the difference of sample proportions <br> $\bar{P}_{1}$ and $\bar{P}_{2}$ approximate a normal distribution with mean $\left(p_{1}-p_{2}\right)$. Then the standard <br> deviation of the difference of sample proportions $\bar{P}_{1}$ and $\bar{P}_{2}$ is |
| :--- | :--- |
| (A) | $\sqrt{\left(\frac{p_{1} q_{1}}{n_{1}}\right)\left(\frac{N_{1}-n_{1}}{N_{1}-1}\right)+\left(\frac{p_{2} q_{2}}{n_{2}}\right)\left(\frac{N_{2}-n_{2}}{N_{2}-1}\right)}$ |
| (B) | $\sqrt{\left(\frac{p_{1} q_{1}}{n_{1}}\right)+\left(\frac{p_{2} q_{2}}{n_{2}}\right)}$ |
| (D) | $\sqrt{\left(\frac{p_{1} q_{1}-p_{2} q_{2}}{n_{1}+n_{2}}\right)}$ |
|  | $\sqrt{\left(\frac{p_{1} q_{1}}{n_{1}+n_{2}}\right)\left(\frac{N_{1}-n_{1}}{N_{1}-1}\right)+\left(\frac{p_{2} q_{2}}{\left.n_{1}+n_{2}\right)\left(\frac{N_{2}-n_{2}}{N_{2}-1}\right)}\right.}$ |
|  |  |

| Q.18 | Which of the following statements is NOT correct in the context of quantity theory of <br> money? |
| ---: | :--- |
| (A) | The quantity of money available determines the price level in the economy. |
| (B) | The growth rate in the quantity of money available determines the inflation rate in the <br> economy. |
| (C) | The velocity of money must rise with the increase in the quantity of money in the economy. |
| neutral. |  |
|  |  |

| Q.19 | Let the function $f: \mathfrak{R}^{2} \rightarrow \mathfrak{R}$ be $f(x, y)=\frac{x y^{2}}{x^{3}+2 x^{2} y+y^{3}}, f(0,0)=0$. Then |
| ---: | :--- |
| (A) | $f$ is differentiable at $(0,0)$. |
| (C) | $f_{x}$ does not exist at $(0,0)$. |
| (D) | $f$ is not continuous at $(0,0)$. |
|  |  |

| Q.20 | Which of the following measures was announced by the Government of India in the year <br> $1994 ?$ |
| ---: | :--- |
| (A) | Full convertibility on capital account |
| (C) | Full convertibility on current account |
| Constitution of the Narasimham Committee on banking sector reforms | Constitution of the Abid Hussain Committee on trade policies |
|  |  |

| Q. 21 | An analyst at the Green Car Co. Ltd. estimated the following demand function for the electric vehicles it sells: $Q_{E}=0.75-1.5 P_{E}+2.5 P_{F}-0.5 P_{B}+3.2 I$ <br> where $Q_{E}=$ Number of electric vehicles (in thousand per year), $P_{E}=$ Unit price of electric vehicle (Rs. in Lakh), $P_{F}=$ Average unit price of vehicle using fossil fuels (Rs. in Lakh), $P_{B}=$ Unit price of battery used in electric vehicle (Rs. in Lakh), $I=$ Personal disposable income (Rs. in Lakh). <br> Let $P_{E}=$ Rs. 6.5 Lakh, $P_{F}=$ Rs. 4.5 Lakh, $P_{B}=$ Rs. 0.5 Lakh and $I=$ Rs. 10 Lakh. Then the income elasticity of demand $\left(e_{Q_{E} I}\right)$ and the cross price elasticity of demand $\left(e_{Q_{E} P_{F}}\right)$ satisfy |
| :---: | :---: |
| (A) | $0.98 \leq e_{Q_{E} I} \leq 0.99 \text { and } 0.33 \leq e_{Q_{E} P_{F}} \leq 0.34$ |
| (B) | $0.94 \leq e_{Q_{E} I} \leq 0.95$ and $0.45 \leq e_{Q_{E} P_{F}} \leq 0.46$ |
| (C) | $0.98 \leq e_{Q_{E^{I}}} \leq 0.99$ and $0.45 \leq e_{Q_{E} P_{F}} \leq 0.46$ |
| (D) | $0.94 \leq e_{Q_{E} I} \leq 0.95 \text { and } 0.33 \leq e_{Q_{E} P_{F}} \leq 0.34$ |
|  |  |
|  |  |

| Q. 24 | Which of the following statements is NOT correct under the IS-LM (Fixed Price) model? |
| ---: | :--- |
| (A) | The LM curve represents the combinations of income and interest rate, where money <br> market is in equilibrium. <br> (B)The IS curve represents the combinations of income and interest rate, where product <br> market (goods and services) is in equilibrium. <br> (C) <br> An increase in money supply raises income and reduces interest rate when the IS curve <br> has negative slope and the LM curve has positive slope. <br> Monetary policy has a relatively weak effect on income when the interest responsiveness <br> of the demand for money is relatively low. |

| Q.25 | The probability of getting head in a toss of a biased coin is $\frac{2}{3}$. Let the coin be tossed three <br> times independently. Then the probability of getting head in the first two tosses and tail in <br> the final toss is |
| ---: | :--- |
| (A) | $\frac{4}{27}$ |
| (B) | $\frac{1}{8}$ |
| (D) | $\frac{2}{27}$ |

| Q.27 | Which of the following is NOT correct regarding $R$-squared <br> Adjusted $R$-squared $\left(\bar{R}^{2}\right)$ ? <br> (A) <br> (B) <br> $R^{2}$ is a scale invariant statistic. <br> $\bar{R}^{2}$ is always positive. <br> (C) <br> $R^{2}$ tends to increase if we add an additional explanatory variable. <br> $\bar{R}^{2}=1-\left(1-R^{2}\right)\left(\frac{n-1}{n-k}\right)$, where $k$ is the number of parameters and $n$ is the number of <br> observations. |
| ---: | :--- |

| Q.28 | The technical change in the endogenous growth model is endogenized by |
| ---: | :--- |
| (A) | providing incentives to firms to innovate. |
| (B) | making the saving function dependent on income. |
| (D) | assuming a perfectly competitive market structure. |
|  |  |

| Q. 29 | Which of the following statements is CORRECT for Game A and Game B? |  |  |
| :---: | :---: | :---: | :---: |
|  | Game A: Mary wants to watch a movie and John is interested in watching a football match. Both wish to be together. The payoff matrix is: <br> John | Game B: The Prisoner's dilemma problem is shown below: |  |
| (A) | In Game A, (Movie, Football) and (Football, Movie) represent Nash equilibrium. In Game B, (Do not confess, Do not confess) is the Nash Equilibrium. |  |  |
| (B) | In Game B, (Confess, Confess) is not a Nash equilibrium but in Game A, both (Movie, Football) and (Football, Movie) represent Nash equilibrium. |  |  |
| (C) | In Game B, the Nash equilibrium is (Do not confess, Do not confess). |  |  |
| (D) | In Game A, both (Movie, Movie) and (Football, Football) represent Nash equilibrium. In Game B, the Nash equilibrium is (Confess, Confess). |  |  |
|  |  |  |  |
|  |  |  |  |

| Q.30 | The short-run production function of a firm is $Q=200+0.2 L^{2}-0.0004 L^{3}$. If wage rate <br> equals Rs. 140 and the number of labours $(L)$ is 100, then the Marginal Cost and the <br> Average Variable Cost, respectively, are |
| ---: | :--- |
| (A) | 5 and 7.78 |
| (C) | 6 and 7.78 |
| (D) 6.68 |  |
| 6 and 6.68 |  |

Section B: Q. 31 - Q. 40 Carry TWO marks each.

| Q.31 | Let $X \sim N\left(\mu_{X}, \sigma_{X}^{2}\right)$ and $Y \sim N\left(\mu_{Y}, \sigma_{Y}^{2}\right)$. Which of the following is/are NOT correct? |
| ---: | :--- |
| (A) | The area $F(X)=\frac{1}{\sigma_{X} \sqrt{2 \pi}} \int_{-\infty}^{\mu_{X}} e^{-\frac{1}{2}\left(\frac{X-\mu_{X}}{\sigma_{X}}\right)^{2}} d x$ is 1. |
| (B) | The areas under the normal probability curve between the ordinates at $\mu_{X} \pm 3 \sigma_{X}$ and |
| (C) | For variable $X$, |
| Quartile Deviation : Mean Absolute Deviation : Standard Deviation $\cong \frac{2}{3} \sigma_{X}: \frac{4}{5} \sigma_{X}: \sigma_{X}$ |  |
| (D) | If $X$ and $Y$ are independent, then $(X-Y) \sim N\left(\mu_{X}-\mu_{Y}, \sigma_{X}^{2}+\sigma_{Y}^{2}\right)$. |

| Q. 33 | Suppose that the regression model is $Y_{i}=\beta_{0}+\beta_{1} X_{1 i}+\beta_{2} X_{2 i}+\mu_{i}, i=1,2, \ldots, n$. Which of <br> the following null hypotheses could be tested using the $F$-test? |
| ---: | :--- |
| (A) | $\beta_{1} / \beta_{2}=0$ |
| (B) | $\beta_{0}=0$ |
| (D) | $\beta_{1} \beta_{2}=0$ |

| Q.34 | Let $f$ be defined by $f(x)=\|x\|+\left\|\cos \left(\frac{\pi}{2}-x\right)\right\|, x \in\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$. Then |
| ---: | :--- |
| (A) | $f$ is continuous on $\left(-\frac{\pi}{2}, 0\right) \cup\left(0, \frac{\pi}{2}\right)$. |
| (B) | $f$ is differentiable at $x=0$. |
| (D) | $f$ is differentiable everywhere except $x=0$. |
| $x \rightarrow 0$ |  |

| Q.35 | The real exchange rate is given by $e=E P / P^{\star}$, where $e$ is the price of domestic goods in <br> terms of foreign goods, $E$ is the price of domestic currency in terms of foreign currency, <br>  <br> $P$ is the domestic price level, $P^{\star}$ is the foreign price level. If the Indian Rupee depreciates <br> vis-à-vis the Japanese Yen, and the Marshall-Lerner condition holds, then <br> (A) <br> India's imports will increase. <br> (B) <br> (D) <br> India's trade balance will improve. <br> foreign demand for Indian goods will increase. |
| ---: | :--- |

| Q.37 | Which of the following statements is/are CORRECT under the Keynesian Cross (Fixed <br> Price) Model? |
| ---: | :--- |
| (A) | The product market and factor market independently determine the full-employment level <br> of output. |
| (B) | Output is determined in the product market by the aggregate expenditure. |
| Money market determines the price level, given the quantity of money and the level of |  |
| output. |  |
| Employment is determined in the factor market by the output level determined in the |  |
| product market. |  |
|  |  |

| Q.38 | Which of the following functions is/are homogeneous? |
| ---: | :--- |
| (A) | $x \cot ^{-1}\left(\frac{y}{x}\right)$ |
| (C) | $\sqrt{\frac{x}{y}}+\frac{3 x}{y}+7$ |
| (D) | $3 x^{5} y+2 x^{2} y^{4}-3 x^{3} y^{4}$ |

| Q. 39 | In the context of Indian agriculture, which of the following statements is/are CORRECT? |
| ---: | :--- |
| (A) | NABARD was established in 1982. |
| (B) | One of the objectives of setting up of the CACP was to ensure remunerative prices to <br> farmers. <br> (D) <br> The APMC Act is related to institutional credit supply in agriculture. |
|  | Thational Commission on Agriculture was chaired by V. M. Dandekar. |
|  |  |

$\left.\begin{array}{|l|l|}\hline \text { Q.40 } & \begin{array}{l}\text { Let a monopolist demand curve be given by } Q=P^{e}, \text { where } Q \text { is output, } P \text { is price, } e \text { is } \\ \text { the price elasticity of demand }(e<-1) \text {, and Marginal Cost }=\text { Average Cost }=\alpha, \text { If } P_{C} \text { and } \\ P_{M} \text { represent the price under perfect competition and monopoly, respectively, then which } \\ \text { of the following is/are NOT correct? } \\ \\ \left(C S_{M} \text { and } C S_{C} \text { represent the consumer surplus under monopoly and perfect competition, }\right. \\ \text { respectively.) }\end{array} \\ \hline \text { (A) } & P_{C}=\alpha\left(\frac{e}{1+e}\right) \\ \hline \text { (C) } & \text { For } e=-2, C S_{M}=C S_{C} . \\ \hline \text { (D) } & \text { For } e \text { closer to }-1, \text { the ratio } C S_{M} / C S_{C} \text { increases. } \\ \hline 1+e\end{array}\right)$

|  |  |
| :---: | :---: |
| Q. 44 | Let $a, b \in \mathfrak{R}$. If $f(x)=a x+b$ is such that <br> $a+b=4$ and $f(x+y)=f(x)+f(y)-2$ for all $x, y \in \mathfrak{R}$, <br> then $\sum_{n=1}^{50} f(n)=$ $\qquad$ (in integer). |
|  |  |
|  |  |
| Q. 45 | The Total Variable Cost (TVC) for a firm is given by TVC $=x^{3}-b x^{2}$. The Total Fixed Cost is 848 . <br> The value of $b$ for which the Marginal Cost is minimum at $x=16$ is $\qquad$ (in integer). |
|  |  |
|  |  |
| Q. 46 | Let the consumption function, tax function, and income identity be given by $C=C_{0}+b(Y-T), T=T_{0}+t Y$, and $Y=C+I_{0}+G_{0}$, respectively, where $C_{0}, I_{0}$, $G_{0}$, and $T_{0}$ are autonomous consumption, investment, government expenditure, and tax, respectively. If $b=0.75$ and $t=0.1$, then an increase in $G_{0}$ by Rs. 20 million will increase $Y$ by Rs. $\qquad$ million (round off to 2 decimal places). |
|  |  |
|  |  |

| Q. 47 | Let the system of equations be $\alpha u+w=0, u+\alpha v=0, v+\alpha w=0$, where $\alpha \in \mathfrak{R}$. Then the system has infinite solutions if $\alpha=$ $\qquad$ (in integer). |
| :---: | :---: |
|  |  |
|  |  |
| Q. 48 | Assume that the cost function for the $i^{t h}$ firm in an industry is given by $C_{i}=0.25 q_{i}^{2}+2 q_{i}+5, \quad i=1,2, \ldots, 150,$ <br> where $C_{i}$ and $q_{i}$ are cost and output for the $i^{\text {th }}$ firm, respectively. <br> Let the aggregate inverse demand function be $P=10-0.01 Q$, where $P$ is the unit price and $Q$ is the aggregate output. <br> Assuming perfect competition, the equilibrium quantity is $\qquad$ (in integer). |
|  |  |
|  |  |

The personal disposable income for the year 2019-20 is Rs. $\qquad$ Lakh Crores (in integer).

Section C: Q. 51 - Q. 60 Carry TWO marks each.

|  |  |
| :---: | :---: |
| Q. 57 | Given the following information related to product and money markets, > Product Market > $C=300+0.8(Y-T)$ > $T=200+0.2(Y)$ > $I_{0}=300 ; G_{0}=400$ <br> Money Market $\frac{M_{o}}{P}=0.4 Y-200 i$ $M_{0}=900 ; P=1(\text { Fixed })$ <br> where $Y=$ Income, $C=$ Consumption, $T=$ Tax, $I_{0}=$ Autonomous Investment, $G_{0}=$ Autonomous Government Expenditure, $M_{0}=$ Nominal Money Demand, $P=$ Price, and $i=$ Interest Rate. <br> The equilibrium level of interest rate (in \%) is $\qquad$ (round off to 2 decimal places). |
|  |  |
|  | くuñ |
| Q. 58 | Let the linear programming problem be $\begin{array}{ll} \text { Maximize } & Z=-0.2 x_{1}+x_{2} \\ \text { subject to } & 2 x_{1}+5 x_{2} \leq 70 \\ & x_{1}+x_{2} \leq 20, \\ & x_{1}, x_{2} \geq 0 . \end{array}$ <br> If $x_{1}=a$ and $x_{2}=b$ is the optimal solution, then $a+b=$ $\qquad$ (in integer). |
|  | $x^{2}$ |
|  |  |

| Q.59 | Let the production function be $Q=\sqrt{L^{2}+K^{2}}$, the unit price of labour ( $L$ ) and <br> capital (K) be Rs. 30 and Rs. 40, respectively, and the total cost be Rs. 580 . Then the <br> maximum value of $Q$ subject to the cost constraint is ___ (round off to 2 decimal <br> places). |
| :--- | :--- |
| Q.60 | In a market, two firms $F_{1}$ and $F_{2}$ are producing homogenous products. The inverse demand <br> function is given by $p=120-0.5\left(q_{1}+q_{2}\right)$, where $p$ is the unit price of the product, <br> and $q_{1}$ and $q_{2}$ are the outputs from $F_{1}$ and $F_{2}$, respectively. Suppose the cost functions of <br> $F_{1}$ and $F_{2}$ are $C_{1}=20 q_{1}$ and $C_{2}=10+0.5 q_{2}^{2}$, respectively. Then the total profit earned <br> by both the firms assuming a competitive situation is |
| (in integer). |  |
