Paper:	PHYSICS
Set Name:	PHY17
Exam Date:	18 Aug 2022
Exam Shift:	2
Langauge:	English

Section:	PHYSICS
Item No:	1
Question ID:	**909401**
Question Type:	MCQ
Question:	An infinitly long wire is charged uniformly with charge density λ and placed in air, the electric field at distance r from wire will be : (1) $\frac{1}{4\pi\varepsilon_0}\frac{\lambda}{r}$ (2) $\frac{1}{4\pi\varepsilon_0}\frac{\lambda}{r^2}$ (3) $\frac{\lambda}{2\varepsilon_0}$ (4) $\frac{\lambda}{2\pi\varepsilon_0 r}$
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	2
Question ID:	**909402**
Question Type:	MCQ
Question:	Two point charges $(-q)$ and $(+4q)$ are placed at separation 'r'. Where should a third charge be placed so that entire system of charges becomes in equilibrium ? (1) at separation 'r' from $(-q)$ on the extreme side of $-q$. (2) at separation 'r' from (4q) on the extreme side of 4q. (3) at separation $\frac{r}{2}$ from $(-q)$ in between the two charges. (4) at separation $\frac{r}{4}$ from (4q) in between the two charges.
A:	1

B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	3
Question ID:	**909403**
Question Type:	MCQ
Question:	The variation of electric field with respect to distance from centre of a charged conducting spherical shell of radius R is given by : (1)  (2)  (3)  (4) A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	4
Question ID:	**909404**
Question Type:	MCQ
Question:	A conducting sphere is charged. If the electric field at a distance 20 cm from the centre of

Question:	A conducting sphere is charged. If the electric field at a distance 20 cm from the centre of the sphere is 1.2×10^{3} NC^{-1} and points radially inwards, the net charge on the sphere is : (1) 4.5×10^{9} C (2) -4.5×10^{-9} C (3) 1.7×10^{9} C (4) -5.3×10^{-9} C
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	5
Question ID:	**909405**
Question Type:	MCQ
Question:	A parallel plate capacitor having cross - sectional area 'A' and separated by distance 'd' is filled by copper plate of thickness b. It's capacitance is : (1) $\frac{\varepsilon_0 A}{2d}$ (2) $\frac{\varepsilon_0 A}{d-b}$ (3) $\frac{2\varepsilon_0 A}{d+\frac{b}{2}}$ (4) $\frac{\varepsilon_0 A}{d+\frac{b}{2}}$
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	6
Question ID:	**909406**
Question Type:	MCQ
	The expression for torque '$\vec{\tau}$' experienced by an electric dipole of dipole moment '$\vec{P}$' in

Question:	an external uniform electric field ' E ' is given by : (1) $\vec{\tau} = \vec{P} \cdot \vec{E}$ (2) $\vec{\tau} = \frac{\vec{P}}{\vec{E}}$ (3) $\vec{\tau} = \frac{\vec{E}}{\vec{P}}$ (4) $\vec{\tau} = \vec{P} \times \vec{E}$
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	7
Question ID:	**909407**
Question Type:	MCQ
Question:	Find the value of current in the circuit.  (1) 4 A (2) 3 A (3) 2 A (4) 1 A
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	8
Question ID:	**909408**
Question Type:	MCQ
	A voltmeter of resistance 150 Ω is connected across A and B in the given circuit. The

Question:	reading of voltmeter will be :  (1) 40 V (2) 20 V (3) 15 V (4) 25 V
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	9
Question ID:	**909409**
Question Type:	MCQ
Question:	A potentiometer with a cell of 2.4 volt and internal resistance of 2 Ω maintains a potential drop across the resistance wire AB of length 2 meters and resistance 10 Ω. A standard cell which maintains a constant emf of 'V' volt with internal resistance 0.2 Ω gives a balance point at 1.6 m length of the wire. The value of emf of second (standard) cell (V) is :  (1) 2.0 volt (2) 1.9 volt (3) 1.8 volt (4) 1.6 volt
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	10

Question ID:	**909410**
Question Type:	MCQ
Question:	Drift velocity of electrons is directly proportional to the : (1) Temperature (2) Voltage applied (3) Length of the conductor (4) Area of cross section of conductor
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	11
Question ID:	**909411**
Question Type:	MCQ
Question:	Which of the following graph correctly represents the variation of resistivity 's' with temperature 'T' for a semiconductor material ? (1)  (2)  (3)  (4) A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	12
Question ID:	**909412**
Question Type:	MCQ
Question:	A proton and an alpha particle moving with same kinetic energy enter in the region of uniform magnetic field perpendicular to it. The ratio of radii of their trajectories will be : (1) 1 : 1 (2) $\sqrt{2}$: 1 (3) 4 : 1 (4) 1 : $\sqrt{2}$
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	13
Question ID:	**909413**
Question Type:	MCQ
Question:	An electron is projected in a uniform magnetic field along the direction of field, the electron will experience : (1) a force opposite to the magnetic field (2) a force in the direction of magnetic field (3) no force in magnetic field (4) a force perpendicular to the magnetic field
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	14
Question ID:	**909414**
Question Type:	MCQ
Question:	Magnetic field due to the current carrying wire as shown in the figure at point "O" will be : 

Question:	 (1) $\frac{\mu_0 I}{2R}$ (2) $\frac{\mu_0 I}{4R}$ (3) $\frac{\mu_0 I}{2\pi R}$ (4) $\frac{\mu_0 I}{4\pi R}$
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	15
Question ID:	**909415**
Question Type:	MCQ
Question:	An electron is shot into the uniform magnetic field, normal to the direction of field. Then the frequency of revolution of the electron in its circular orbit : (1) is independent of its speed (2) decreases with its speed (3) increases with its speed (4) increase with radius of revolution
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	16
Question ID:	**909416**
Question Type:	MCQ
Question:	To convert a galvanometer into an ammeter, one should connect : (1) high resistance in series with galvanometer (2) low resistance in series with galvanometer (3) low resistance in parallel with galvanometer

	(4) high resistance in parallel with galvanometer
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	17
Question ID:	**909417**
Question Type:	MCQ
Question:	Given below are two statements : **Statement I :** The electric field produced by a scalar source is known as electric charge. **Statement II :** The magnetic field produced by a vector source is known as current element (I dl). In the light of the above statements, choose the **correct** answer from the options given below : (1) Both **Statement I** and **Statement II** are true (2) Both **Statement I** and **Statement II** are false (3) **Statement I** is correct but **Statement II** is false (4) **Statement I** is incorrect but **Statement II** is true
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	18
Question ID:	**909418**
Question Type:	MCQ
Question:	Which of the following rays are used in doing LASIK (Laser - Assisted in Situ peratomileusis) eye surgery ? (1) Ultraviolet rays (2) Infrared rays (3) Gamma rays (4) Micro waves
A:	1
B:	2
C:	3
D:	4

Section:	PHYSICS
Item No:	19
Question ID:	**909419**
Question Type:	MCQ
Question:	The magnetic field of a plane electromagnetic wave is given by $B_x = 2\times10^{-7}\sin(0.6\times10^3 y + 2\times10^{11}\,t)\,T$. An expression for its electric field is : (1) $E_x = 2\times10^{-7}\sin(0.6\times10^3 y + 2\times10^{11}\,t)\,V/M$ (2) $E_y = 60\sin(0.6\times10^3 y + 2\times10^{11}\,t)\,V/M$ (3) $E_z = 2\times10^{-7}\sin(0.6\times10^3 y + 2\times10^{11}\,t)\,V/M$ (4) $E_z = 60\sin(0.6\times10^3 y + 2\times10^{11}\,t)\,V/M$
A:	1
B:	2
C:	3
D:	4

The rails, the rod and the magnetic field are in three mutual perpendicular directions. A galvanometer G connects the rails through a switch K. Length of the rod = 15 cm, B = 0.50 T, resistance of the closed loop containing the rod =180.0 mΩ . Assume the field to be uniform.  The magnetic force experienced by the rod when K is closed will be : (1) 7.5×10^{-2} N (2) 3.25×10^{-2} N (3) 6.45×10^{-2} N (4) 3.75×10^{-2} N
A:	1
B:	2
C:	3
D:	4

Question Type:	MCQ
Question:	Figure shows a metal rod PQ resting on the rails AB and positioned between the poles of a permanent magnet. The rails, the rod and the magnetic field are in three mutual perpendicular directions. A galvanometer G connects the rails through a switch K. Length of the rod = 15 cm, B = 0.50 T, resistance of the closed loop containing the rod =180.0 mΩ . Assume the field to be uniform. 

Question:	 The power required (by an external agent) to keep the rod moving at the same speed ($=12\ \text{cms}^{-1}$) when K is closed will : (1) Zero (2) 9×10^{-3} W (3) 4.5×10^{-3} W (4) 6.4×10^{-3} W
A:	1
B:	2
C:	3
D:	4

Question Type:	MCQ
Question:	Figure shows a metal rod PQ resting on the rails AB and positioned between the poles of a permanent magnet. The rails, the rod and the magnetic field are in three mutual perpendicular directions. A galvanometer G connects the rails through a switch K. Length of the rod = 15 cm, B = 0.50 T, resistance of the closed loop containing the rod =180.0 mΩ . Assume the field to be uniform.  The induced emf produced in the moving rod if the magnetic field becomes parallel to the rails instead of being perpendicular will be : (1) 3×10^{-3} V (2) 6×10^{-3} V (3) 9×10^{-3} V (4) Zero
A:	1
B:	2
C:	3
D:	4
