Lateral Entry B. Pharm., 60 Questions

1.	The use of which of the following drug is associated with the development of a systemic lupus erythematosus (SLE) like syndrome? (a) Probenecid (b) Phenobarbital (c) Nitrofurantoin (d) Hydralazine.			
2.	An inverse relationship exists between the concentration of calcium in the blood and the blood concentration of (a) Magnesium (b) Thyroid hormone (c) Testosterone (d) Phosphorus			
3.	A patient receiving isocarboxazid should be advised to (a) Avoid foods high in potassium (b) Avoid foods high in tyramine (c) Avoid foods high in Sodium (d) Avoid foods high in vitamin K			
4.	An antacid that is most likely to induce gastric hyper secretion is (a) Calcium carbonate (b) Bismuth subgallate (c) Aluminium hydroxide (d) Magnesium hydroxide.			
5.	A drug interaction is likely to occur when 6-mercaptopurine is used with (a) Aspirin (b) Allopurinol (c) Streptokinase (d) Pyridoxin			
6.	Which one of the following body areas usually has the lowest (most acidic) pH? (a) Blood (b) Lachrymal fluid (c) Oral cavity (d) Skin			
7.	A patient is using hydrochlorothiazide and guanethidine for the treatment of hypertension. This patient should not receive (a) Potassium supplementation (b) Tricyclic antidepressants (c) Aluminium containing antacids (d) Folic acid supplementation			
8.9.	Which of the following is true of active transport System? (a) They do not consume energy (b) They never become saturated (c) They do not reach equilibrium (d) All of the above. The diagnostic test that is most closely associated with organ 'Heart' is (a) Bilirubin (b) Amylase (c) alkaline phosphatase (d) Lactate dehydrogenase.			

10.	Thiazides may produce			
	(a) Reduce glucose tolerar	nce	(b) Hyperkalemia	
	(c) Decrease blood levels	of uric acid	· · · · · · · · · · · · · · · · · · ·	
11.	. The most frequent dose limiting adverse effect associated with cancer chemotherapy is			
	(a) alopecia	(b) mucosi	itis	
	(c) nausea and vomiting	, ,	suppression	
12.	The drug of choice in the tale (a) Calcium gluconate		hyperkalemia induced arrhythmias is	
	(c) Sodium bicarbonate			
13.	The inhibition of Pituitary following?	thyrotropin	secretion is controlled by which of th	e
	(a) Free thyroxine	(b) Thyroi	id-releasing hormone	
	(c) Free thyroxine index	(d) Revers	se tri-iodothyronine	
14.		(b) Can not	ociated with be used by patient with heart failure alternated with an antacid mixture to	
15.	When administered at the efficacy of which of the form (a) Sucralfate (c) Cimetidine		ine	
16.	In Validity of a drug manu	ufacturing lic	ense is upto	
	(a) 31 st April	(b) 30	Oth June	
	(c) 31 st December	(d) 1^{s}	st January	
17.	Central Drug Research Ins (a) Kasauli	stitute is situa (b) Calcutta		
	(c) Lucknow	(d) Izatnagai		
	, ,			
18.	Starches from various sou	•	•	
	(a) getatinisation temperat		carbohydrate content	
	(c) by iodine colour test	(d) by 1	NMR spectroscopy.	

19.	Lemon peel is rich in terpene (a) thymol (b) eugenol		
	(c) citral	(d) limonene.	
20.	Ideally, an antacid should raise the pH of the stomach contents to a value of approximately		
	(a) 3.5	(b) 5.5	
	(c) 6.5	(d) 7.5	
21.	Psoriasis is characterized	l by	
	(a) Granulomatous lesion		
	(c) Silvery grey scales	(d) Small red vesicles	
22.	A patient suffering from treated initially with	severe hypertensive crisis would most likely be	
	(a) guanethidine	(b) methyldopa	
	(c) reserpine	(d) diazoxide.	
23.	already receiving high d (a) ethacrynic acid	(b) tetracycline	
	(c) propantheline bromio	le (d) pentobarbital sodium.	
24.	The level of which of the pancreatitis?	e following enzymes would be elevated in acute	
	(a) alkaline phosphatase	(b) acid phosphatase	
	(c) lactic dehydrogenase	(d) amylase.	
25.	Which of the following is	s not a white blood cell?	
	(a) basophil	(b) eosinophil	
	(c) monocyte	(d) reticulocyte	
26.	6. A penicillin derivative that is most closely related to ampicillin but has much greater activity against 'Pseudomonas' is		
	(a) methicillin	(b) ticarcillin	
	(c) nafcillin	(d) dicloxacillin	
27.	Heroin is		
	(a) 3, 6 di-acetyl morphi	-	
	(c) addictive	(d) All of the above	

(a) loganin (b) strychnine (c) brucine (d) vomicine. 29. Myxedema is what kind of state (a) Hypothyroid (b) Hypoparathyroid (c) Hyperthyroid (d) Hyperparathyroid 30. A micro organism that is particularly dangerous to eye is (a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (d) calamine (e) ichthamol (d) sulbhur.	28.	8. A glycoside present in Nux-vomica seed is			
29. Myxedema is what kind of state (a) Hypothyroid (b) Hypoparathyroid (c) Hyperthyroid (d) Hyperparathyroid 30. A micro organism that is particularly dangerous to eye is (a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,		(a) loganin	(b) strychnine		
(a) Hypothyroid (b) Hypoparathyroid (c) Hyperthyroid (d) Hyperparathyroid 30. A micro organism that is particularly dangerous to eye is (a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,		(c) brucine	(d) vomicine.		
(a) Hypothyroid (b) Hypoparathyroid (c) Hyperthyroid (d) Hyperparathyroid 30. A micro organism that is particularly dangerous to eye is (a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,	29	Myyedema is what kir	nd of state		
(c) Hyperthyroid (d) Hyperparathyroid 30. A micro organism that is particularly dangerous to eye is (a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,	2).	_			
 30. A micro organism that is particularly dangerous to eye is (a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,					
(a) Aspergillus niger (b) Bacillus subtilis (c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar		(c) Hypermyroid	(d) Hyperparamyroid		
(c) E. coli (d) Pseudomonas aeruginosa 31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar	<i>30</i> .	A micro organism that	t is particularly dangerous t	o eye is	
31. A Physician has decided upon a course of tetracycline therapy for a patient with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relativate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,		(a) Aspergillus niger	(b) Bacillus subtilis		
with renal impairment. Which of the following drug is least likely to accumulate in the patient's blood? (a) demeclocycline (b) doxycycline (c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar		(c) E. coli	(d) Pseudomonas aeruş	ginosa	
(c) minocycline (d) oxytetracycline 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar	31.	with renal impairment accumulate in the patie	. Which of the following drent's blood?		
 32. The peak of the serum concentration vs time curve approximates the (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies,					
 (a) Point in time when max pharmacological effect occurs. (b) Point in time when absorption and elimination of the drug have equalities (c) Maximum concentration of free drug in the urine. (d) Time required for essentially the entire drug to be absorbed from the G.I. tract. 33. The time of the peak serum concentration gives some indication of the relative rate of (a) absorption (b) distribution (c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies , is used. (a) calamine (b) coal tar 		(c) illinocycline	(d) Oxyletracycline		
rate of (a) absorption (b) distribution (c) metabolism 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar	32.	(a) Point in time when(b) Point in time when(c) Maximum concent(d) Time required for example of the content	max pharmacological effect a absorption and elimination tration of free drug in the un	ct occurs. n of the drug have equalities. ine.	
(c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar	33.	-	erum concentration gives s	ome indication of the relative	
(c) metabolism (d) elimination 34. Methyl salicylate is also known as (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar		(a) absorption	(b) distribution		
 (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies , is used. (a) calamine (b) coal tar 		_			
 (a) Camphorated oil (b) peppermint oil (c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies , is used. (a) calamine (b) coal tar 	21	Mathyl colicylate is al	so known as		
(c) Salicylamide (d) Oil of wintergreen 35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar	34.	· ·			
35. The concentration of ethyl alcohol in dilute alcohol is (a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar		_			
(a) 20% (b) 50% (c) 70% (d) 92% 36. To treat a mild case of scabies , is used. (a) calamine (b) coal tar		(c) Sancylamide	(a) On or wintergreen		
(c) 70% (d) 92% 36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar	35.	The concentration of e	ethyl alcohol in dilute alcoh	ol is	
36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar		(a) 20%	(b) 50%		
36. To treat a mild case of scabies, is used. (a) calamine (b) coal tar		(c) 70%	(d) 92%		
(a) calamine (b) coal tar	36.	` '	* *	is used.	
(c) ichthamol (d) sulphur.					
(a) sarprior.		(c) ichthamol	(d) sulphur.		

37.	Ibuprofen has a pka of the ratio of dissociated (a) 2:1 (c) 20:1	-	of a patient's urine is 7.5, what will be ed drug be?
38.	Which of the following (a) alpha-radiation (c) gamma-radiation	(b) beta-radia	ation has the greatest penetration power tion
39.	All the following visco except (a) hydroxy propyl met (c) polyvinyl pyrolidon	hyl cellulose	ave been used in opthalmic solution (b) polyvinyl alcohol (d) veegum.
40.	4	tic with each of true false true but the s	
41.	An excellent choice of would be	diluent for cor	mpressed vaginal tablet formulation
	(a) lactose(c) sucrose	(b) starch (d) talc	
42.	A synonym of cold creat (a) Galen's cerate (c) rose water ointment	(b) petrolatu	um rose water ointment emulsion
43.	The local anesthetic mo (a) benzocaine (c) lidocaine	ost commonly (b) butamber (d) phenol	need in OTC burn remedies is n picrate
44.	Which of the following products? (a) epinephrine (c) metaproterinol	(b) ephedrine	

45.	 5. Characteristic of inhalation aerosol dosage (a) avoid first pass metabolism (b) rapid onset of action (c) can administered large amounts of dru (d) both a and b 				
46.	(a) excessive lubricant (b) excessive	The capping of a tablet may be result of any of the following except (a) excessive lubricant (b) excessive pressure of compression (c) excessive fine powder (d) insufficient binder			
47.	7. Which of the following is not used primar formulations? (a) magnesium stearate (b) dica (c) lactose (d) man	lcium phosphate			
48.	8. A vehicle for nasal medication should pose except (a) an acid pH (b) isoto (c) high buffer capacity (d) ability				
49.	9. The most preferred digitalis cardiac glyco (a) digitoxin (b) gitoxi (c) digitonin (d) digoxi	n			
50.		tylpyridinium chloride bitan monopalmitate			
51.	 All of the following statements concerning (a) toxoids are detoxified toxins (b) toxoids are antigen (c) toxoids produce permanent immunity (d) toxoids produce artificial active immunity 	•			
52.		or active immunization except erial antigens tiple antigen preparation			

53.	Methyl paraben is an ester of (a) benzoic acid (c) para amino salicylic acid	(b) propionic acid
54.	Naturally occuring vitamin (a) menadione (c) tocopherol	
55.	Even distribution of drug in expected within(a) 1 (c) 4	to the blood after an i.v. bolus injection can be minutes. (b) 10 (d) 30
56.	A suspension is not suitable (a) intra-articular (c) intra-muscular	(b) intra-dermal
57.	Isotonicity is critical for wh (a) intra-articular (c) intra-muscular	(b) intra-dermal
58.	solution (a) 16G 5/8" (dles is suitable for the administration of insulin b) 21G ½" d) 25G 5/8"
59.	The shrinkage that occurs we primarily due to (a) attractive Vander waals (c) hydrogen bonding	when alcohol and purified water are mixed is forces (b) covalent bonding (d) ionic bonding.
60.	According to USP the instruindicates storage in a (a) dark place (c) light resistant container	(b) coloured glass bottle (d) tight glass container.
