7. Read the following passage and make notes : 1×4=4
- The process of study involves four operations — perception, comprehension, retention and retrieval. In other words, you should first perceive what is relevant to your needs and select only those areas which are important. You cannot study everything available in every book you can lay your hands on. Once you have decided on areas, which are important, you have to read and understand — or comprehend the material that you have selected — for no learning can take place without comprehension. What is not understood is not learnt. Comprehension is thus imperative in the process of learning. However, mere comprehension is not enough. What one understands now, may also be easily forgotten later. Hence, you, as a student, have to make special efforts to retain what you comprehend. You also have to retrieve all that you learn throughout the year at the time of examination.
