Passage Questions (2-6)

**Read the passage and answer the questions that follow:**

He walked fairly fast, and doggedly, without looking much about him, like a man trying to shorten the way with some interesting train of thought. He was tall, but a little round-shouldered, about thirty-five to forty years of age, and dressed with that particular kind of shabbiness which marks a member of the intelligentsia on a holiday. He might easily have been mistaken for a doctor or a schoolmaster at first sight, though he had not the man-of-the-world air of the one or the indefinable breeziness of the other. In fact, he was a philologist, and fellow of a Cambridge college. His name was Ransom.

2) What marked Ransom as a member of the intelligentsia?

- A) He had round-shoulders.
  - B) He was too experienced for his current assignment.
  - C) He was unusually tall.

Passage questions (37-41)

Read the following passage and answer the questions below:

Food is scattered thinly in the open ocean, and seabirds often need to search far and wide to find sustenance. Now, researchers think they've found a new cooperative strategy among the birds, one that may help them survive on the high seas. Multiple groups of flying seabirds can arrange themselves into massive line formations that "rake" over the ocean's surface, possibly to more efficiently search for food. Analysing the radar images for movement patterns in groups of seabirds, the scientists found that multiple groups would fly in a parallel sweep as often as 19 times a day. The birds also seemed to be adjusting their speed and position relative to one another so that they formed an evenly spaced line over the top of the ocean.

37) Searching in groups is more efficient because

- A) each bird goes farther away at the same time
  - B) they cover larger areas at the same time
  - C) the groups share the food at the same time
  - D) the groups search more efficiently for food
