

3 Circle.

**Q.1. Four alternative answers for each of the following questions are given.
Choose the correct alternative.**

- 1) Two circles intersect each other such that each circle passes through the centre of the other. If the distance between their centres is 12, what is the radius of each circle ?
(A) 6 cm (B) 12 cm (C) 24 cm (D) can't say
- 2) A circle touches all sides of a parallelogram. So the parallelogram must be a,
.....
(A) rectangle (B) rhombus (C) square (D) trapezium
- 3) $\angle ACB$ is inscribed in arc ACB of a circle with centre O . If $\angle ACB = 65^\circ$, find $m(\text{arc } ACB)$.
(A) 65° (B) 130° (C) 295° (D) 230°
- 4) In a cyclic $\square ABCD$, twice the measure of $\angle A$ is thrice the measure of $\angle C$. Find the measure of $\angle C$?
(A) 36 (B) 72 (C) 90 (D) 108
- 5) How many circles can draw passing through three non-collinear points?
(A) 0 (B) Infinite (C) 2 (D) One and only one(unique)
- 6) Two circles of radii 5.5 cm and 4.2 cm touch each other externally. Find the distance between their centres
(A) 9.7 (B) 1.3 (C) 2.6 (D) 4.6
- 7) What is the measurement of angle inscribed in a semicircle?
(A) 90° (B) 120° (C) 100° (D) 60°
- 8) Two circles having diameters 8 cm and 6 cm touch each other internally. Find the distance between their centres.
(A) 2 (B) 14 (C) 7 (D) 1
- 9) Points A, B, C are on a circle, such that $m(\text{arc } AB) = m(\text{arc } BC) = 120^\circ$. No point, except point B , is common to the arcs. Which is the type of $\triangle ABC$?
(A) Equilateral triangle (B) Scalene triangle
(C) Right angled triangle (D) Isosceles triangle
- 10) In $\square PQRS$ if $\angle RSP = 80^\circ$ then find $\angle RQT$?
(A) 100° (B) 80°
(C) 70° (D) 110°

Q.2 Solve the following sub-questions. (1 mark question)

1) How many circles can be drawn passing through a point?

2) Segment DP and segment DQ are tangent segments to the circle with center A,

If $DP = 7$ cm. So find the length of the segment DQ?

3) Two circles having radii 3.5 cm and 4.8 cm touch each other internally. Find the distance between their centres.

4) What is the measure of a semi circular arc?

5) A, B, C are any points on the circle with centre O. If $m \text{ arc } (BC) = 110^\circ$ and $m \text{ arc } (AB) = 125^\circ$, find measure arc AC

6) In the figure if $\angle PQR = 50^\circ$ then find $\angle PSR$

7)

In the adjoining figure the radius of a circle with centre C is 6 cm, line AB is a tangent at A. What is the measure of $\angle CAB$? Why?

8) In the figure quadrilateral ABCD is a cyclic, if $\angle DAB = 75^\circ$ then find measure of $\angle DCB$

- 9) In the adjoining figure, seg DE is the chord of the circle with center C. seg $CF \perp$ seg DE and $DE = 16$ cm, then find the length of DF?

- 10) In the figure, if $\angle ABC = 35^\circ$ then find $m(\text{arc } AXC)$?

Q.3 Complete the following activities (2 marks each).

The chords corresponding to congruent arcs of a circle are congruent. Prove the theorem by completing following activity.

Given : In a circle with centre B

$\text{arc } APC \cong \text{arc } DQE$

To Prove : Chord $AC \cong$ chord DE

Proof : In $\triangle ABC$ and $\triangle DBE$,

side $AB \cong$ side DB

side $BC \cong$ side

$\angle ABC \cong \angle DBE$

(measure of congruent arcs)

$\triangle ABC \cong \triangle DBE$

- 2) In figure , points G, D, E, F
are concyclic points of a circle with centre C.
 $\angle ECF = 70^\circ$, $m(\text{arc } DGF) = 200^\circ$
find $m(\text{arc } DEF)$ by completing activity.

$$m(\text{arc EF}) = \angle ECF \quad \dots \quad (\text{Definition of measure of arc})$$

$$\therefore m(\text{arc EF}) = \boxed{}$$

$$\text{But; } m(\text{arc DE}) + m(\text{arc EF}) + m(\text{arc DGF}) = \boxed{} \quad (\text{measure of a complete circle})$$

$$\therefore m(\text{arc DE}) = \boxed{}$$

$$\therefore m(\text{arc DEF}) = m(\text{arc DE}) + m(\text{arc EF})$$

$$\therefore m(\text{arc DEF}) = \boxed{}$$

3)

In the figure if the chord PQ and chord RS intersect at point T Prove that :
 $m\angle STQ = \frac{1}{2} [m(\text{arc PR}) + m(\text{arc SQ})]$ for any measure of $\angle STQ$ by filling out the boxes.

$$\text{Proof: } m\angle STQ = m\angle SPQ + \boxed{} \quad \dots (\text{Theorem of the external angle of a triangle})$$

$$= \frac{1}{2} m(\text{arc } SQ) + \boxed{} \quad \dots \dots (\text{inscribed angle theorem})$$

$$= \frac{1}{2} [+]$$

- 4) In figure, chord $EF \parallel$ chord GH . Prove that, chord $EG \cong$ chord FH . Fill in the blanks and write the proof.

Proof : Draw seg GF .

$$\angle EFG = \angle FGH \quad \dots\dots \boxed{} \quad (I)$$

$$\angle EFG = \boxed{} \quad \dots\dots(\text{inscribed angle theorem}) \quad (II)$$

$$\angle FGH = \boxed{} \quad \dots\dots(\text{inscribed angle theorem}) \quad (III)$$

$$\therefore m(\text{arc } EG) = \boxed{} \quad \dots\dots[\text{By (I) , (II) \& (III) }]$$

chord $EG \cong$ chord FH (corresponding chords of congruent arcs)

The angle inscribed in the semicircle is a right angle Prove the result by completing the following activity .

Given: $\angle ABC$ is inscribed angle in a semicircle with center M.

To prove : $\angle ABC$ is a right angle.

Proof: segment AC is a diameter of the circle.

$$\therefore m(\text{arc } AXC) = \boxed{}$$

Arc AXC is intercepted by the inscribed angle $\angle ABC$.

$$\angle ABC = \boxed{} \quad \dots\dots(\text{Inscribed angle theorem})$$

$$= \frac{1}{2} \times \boxed{}$$

$$\therefore m \angle ABC = \boxed{}$$

$\therefore \angle ABC$ is a right angle.

- 6) Prove that angles inscribed in the same arc are congruent.

Given: In a circle with centre C, $\angle PQR$ and $\angle PSR$ is inscribed in same arc PQR. Arc PTR is intercepted by the angles.

To prove : $\angle PQR \cong \angle PSR$.

Proof : $m\angle PQR = \frac{1}{2} \times [m(\text{arc PTR})]$ (i)

$m\angle$ $= \frac{1}{2} \times [m(\text{arc PTR})]$

$m\angle$ $= m\angle PSR$ By(i) &(ii)

$\therefore \angle PQR \cong \angle PSR$

- 7) If O is the center of the circle in the figure alongside , then complete the table from the given information.

The type of arc

Type of circular arc	Name of circular arc	Measure of circular arc
Minor arc		
Major arc		

Q.4. Solve the following sub-questions. (2 marks question)

1)

In the adjoining figure circle with Centre D touches the sides of $\angle ACB$ at A and B. If $\angle ACB = 52^\circ$, find measure of $\angle ADB$.

- 2) In the adjoining figure, the line MN touches the circle with center A at point M. If $AN = 13$ and $MN = 5$ then find the radius of the circle?

- 3) What is the distance between two parallel tangents of a circle having radius 4.5 cm? Justify your answer.

- 4) In figure, $m(\text{arc NS}) = 125^\circ$, $m(\text{arc EF}) = 37^\circ$, find the measure $\angle NMS$.

- 5) Length of a tangent segment drawn from a point which is at a distance 15 cm from the centre of a circle is 12 cm, find the diameter of the circle?

- 6) In the figure a circle with center C has $m(\text{arc AXB}) = 100^\circ$ then find central $\angle ACB$ and measure $m(\text{arc AYB})$.

In figure, M is the centre of the circle and seg KL is a tangent segment. If $MK = 12$, $KL = 6\sqrt{3}$ then find (1) Radius of the circle.

(2) Measures of $\angle K$ and $\angle M$.

- 8) In figure, chords AC and DE intersect at B. If $\angle ABE = 108^\circ$, $m(\text{arc AE}) = 95^\circ$, find $m(\text{arc DC})$.

Q. 5. Complete the following activity. (3 marks each)

- 1) Tangent segments drawn from an external point to a circle are congruent, prove this theorem. Complete the following activity.

Given :

To Prove:

Proof : Draw radius AP and radius AQ and complete the following proof of the theorem.

In $\triangle PAD$ and $\triangle QAD$,

Seg PA \cong (radii of the same circle.)

Seg AD \cong Seg AD ()

$\angle APD \cong \angle AQD = 90^\circ$ (tangent theorem)

$\therefore \triangle PAD \cong \triangle QAD$ ()

$\therefore \text{seg DP} \cong \text{seg DQ}$ ()

2)

☐ MRPN is cyclic, $\angle R = (5x - 13)^\circ$, $\angle N = (4x + 4)^\circ$. Find measures of $\angle R$ and $\angle N$, by completing the following activity.

Solution : ☐ MRPN is cyclic

The opposite angles of a cyclic square are

$$\angle R + \angle N = \text{$$

$$\therefore (5x-13)^\circ + (4x+4)^\circ = \text{$$

$$\therefore 9x = 189$$

$$\therefore x = \text{$$

$$\therefore \angle R = (5x-13)^\circ = \text{$$

$$\therefore \angle N = (4x+4)^\circ = \text{$$

- 3) In figure , seg AB is a diameter of a circle with centre O . The bisector of $\angle ACB$ intersects the circle at point D. Prove that, seg $AD \cong$ seg BD . Complete the following proof by filling in the blanks.

Proof Draw seg OD.

$\angle ACB =$ angle inscribed in semicircle
 $\angle DCB =$ CD is the bisector of $\angle C$
 $m(\text{arc } DB) =$ inscribed angle theorem
 $\angle DOB =$ definition of measure of an arc (I)
seg $OA \cong$ seg OB (II)
 \therefore line OD is of seg AB From (I) and (II)
 \therefore seg $AD \cong$ seg BD

- 4) In the adjoining figure circles with centres X and Y touch each other at point Z. A secant passing through Z intersects the circles at points A and B respectively.

Prove that , radius $XA \parallel$ radius YB .

Fill in the blanks and complete the proof.

Construction : Draw segments XZ and YZ.

Proof :By theorem of touching circles, points X, Z, Y are

$\therefore \angle XZA \cong$ opposite angles

Let $\angle XZA = \angle BZY = a$ (I)

Now, seg $XA \cong$ seg XZ (radii of the same circle.)

$\therefore \angle XAZ =$ $= a$ (isosceles triangle theorem) (II)

similarly, seg $YB \cong$ seg YZ (radii of the same circle.)

$\therefore \angle BZY =$ $= a$ (isosceles triangle theorem.) (III)

∴ from (I), (II), (III),

$$\angle XAZ = \boxed{}$$

∴ radius $XA \parallel$ radius YB $\boxed{}$)

- 5) An exterior angle of a cyclic quadrilateral is congruent to the angle opposite to its adjacent interior angle, to prove the theorem complete the activity .

Given : $\square ABCD$ is cyclic ,

$\boxed{}$ is the exterior angle of $\square ABCD$

To prove : $\angle DCE \cong \angle BAD$

Proof : $\boxed{} + \angle BCD = \boxed{}$ (Angles in linear pair) (I)

$\square ABCD$ is a cyclic .

$\boxed{} + \angle BAD \boxed{}$ (Theorem of cyclic quadrilateral) (II)

By (I) and (II)

$$\angle DCE + \angle BCD \boxed{} + \angle BAD$$

$$\angle DCE \cong \angle BAD$$

- 6) Seg RM and seg RN are tangent segments of a circle with centre O. Prove that seg OR bisects $\angle MRN$ as well as $\angle MON$ with the help of activity.

Proof : In $\triangle RMO$ and $\triangle RNO$,

$$\angle RMO \cong \angle RNO = 90^\circ \quad \dots (\quad)$$

$$\text{hypt } OR \cong \text{hypt } OR \quad \dots (\quad)$$

$$\text{seg } OM \cong \text{seg } \quad \dots (\text{ radii of the same circle })$$

$$\therefore \triangle RMO \cong \triangle RNO \quad \dots (\quad)$$

$$\angle MOR \cong \angle NOR$$

$$\text{Similarly } \angle MRO \cong \quad \dots (\quad)$$

7)

In figure , O is the centre of the circle.

Seg AB, seg AC are tangent segments.

Radius of the circle is r and $\ell(AB) = r$,

Prove that, $\square ABOC$ is a square.

Proof : Draw segment OB and OC.

$$\ell(AB) = r \quad \dots (\text{Given}) \quad \text{(I)}$$

$$AB = AC \quad \dots (\quad) \quad \text{(II)}$$

$$\text{But } OB = OC = r \quad \dots (\quad) \quad \text{(III)}$$

From (I),(II) and (III)

$$AB = \quad = OB = OC = r$$

\therefore Quadrilateral ABOC is \square .

$$\text{Similarly } \angle OBA = \quad \dots (\text{Tangent Theorem})$$

If one angle of \square is right angle ,then it is a square.

\therefore Quadrilateral ABOC is a square.

Q.6. Solve the following sub-questions. (3 marks question)

1) Prove the following theorems:

- i) Opposite angles of a cyclic quadrilateral are supplementary.
- ii) Tangent segments drawn from an external point to a circle are congruent.
- iii) Angles inscribed in the same arc are congruent.

2)

Line ℓ touches a circle with centre O at point P. If radius of the circle is 9 cm, answer the following.

- (i) What is $d(O, P)$ = ? Why ?
- (ii) If $d(O, Q) = 8$ cm, where does the point Q lie ?
- (iii) If $d(PQ) = 15$ cm, How many locations of point R are line on line ℓ ? At what distance will each of them be from point P ?

3)

In the adjoining figure, O is the centre of the circle. From point R, seg RM and seg RN are tangent segments touching the circle at M and N. If $(OR) = 10$ cm and radius of the circle = 5 cm, then

- (1) What is the length of each tangent segment ?
- (2) What is the measure of $\angle MRO$?
- (3) What is the measure of $\angle MRN$?

4)

In figure ,chord $AB \cong$ chord CD ,
Prove that, arc $AC \cong$ arc BD

5)

In figure , in a circle with centre O, length of chord AB is equal to the radius of the circle. Find measure of each of the following.

- (1) $\angle AOB$ (2) $\angle ACB$
(3) arc AB

6)

In figure , chord $LM \cong$ chord LN , $\angle L = 35^\circ$
find (i) $m(\text{arc MN})$

(ii) $m(\text{arc LN})$

7) Prove that, any rectangle is a cyclic quadrilateral.

8)

In figure , PQRS is cyclic.
side $PQ \cong$ side RQ . $\angle PSR = 110^\circ$,
Find- (1) measure of $\angle PQR$
(2) $m(\text{arc PQR})$
(3) $m(\text{arc QR})$

9)

In figure , line ℓ touches the circle with centre O at point P. Q is the mid point of radius OP. RS is a chord through Q such that chords $RS \parallel$ line ℓ . If $RS = 12$ find the radius of the circle

10)

In figure , O is the centre of a circle,
chord $PQ \cong$ chord RS If $\angle POR = 70^\circ$
and $m(\text{arc RS}) = 80^\circ$, find (1) $m(\text{arc PR})$ (2)
 $m(\text{arc QS})$ (3) $m(\text{arc QSR})$

11)

In the adjoining figure circle with Centre Q touches the sides of $\angle MPN$ at M and N. If $\angle MPN = 40^\circ$, find measure of $\angle MQN$.

12)

In the figure if O is the center of the circle and two chords of the circle EF and GH are parallel to each other. Show that $\angle EOG \cong \angle FOH$

Q. 7. Solve the following sub-questions. (4 marks question)

1)

In the figure segment PQ is the diameter of the circle with center O. The tangent to the circle drawn from point C on it, intersects the tangents drawn from points P and Q at points A and B respectively, prove that $\angle AOC = 90^\circ$

2) The chords AB and CD of the circle intersect at point M in the interior of the same circle then prove that $CM \times BD = BM \times AC$.

3)

A circle with centre P is inscribed in the $\triangle ABC$. Side AB, side BC and side AC touches the circle at points L, M and N respectively. Radius of the circle is r.

Prove that : $A(\triangle ABC) = \frac{1}{2}(AB + BC + AC) \times r$

4)

In the figure $\square ABCD$ is a cyclic quadrilateral. If $m(\text{arc } ABC) = 230^\circ$. then find $\angle ABC$, $\angle CDA$, $\angle CBE$

5)

The figure $\triangle ABC$ is an isosceles triangle with a perimeter of 44 cm. The sides AB and BC are congruent and the length of the base AC is 12 cm. If a circle touches all three sides as shown in the figure, then find the length of the tangent segment drawn to the circle from the point B

6)

In the figure $\triangle ABC$ is an equilateral triangle. The angle bisector of $\angle B$ will intersect the circumcircle $\triangle ABC$ at point P.

Then prove that : $CQ = CA$.

7)

In the figure quadrilateral ABCD is cyclic, If $m(\text{arc } BC) = 90^\circ$ and $\angle DBC = 55^\circ$. Then find the measure of $\angle BCD$.

- 8) Given : A circle inscribed in a right angled $\triangle ABC$. If $\angle ACB = 90^\circ$ and the radius of the circle is r .

To prove : $2r = a + b - c$

- 9) In a circle with centre P, chord AB is parallel to a tangent and intersects the radius drawn from the point of contact to its midpoint. If $AB = 16\sqrt{3}$ then find the radius of the circle.

- 10) In the figure, O is the center of the circle.

Line AQ is a tangent. If $OP = 3$

$m(\text{arc PM}) = 120^\circ$

then find the length of AP?

Q. 8. Solve the following sub-questions (3 marks each)

- 1) In the figure, O is the centre of the circle and $\angle AOB = 90^\circ$, $\angle ABC = 30^\circ$

Then find $\angle CAB$?

2)

In the figure a circle with center P touches the semicircle at points Q and C having center O. if diameter $AB = 10$, $AC = 6$ then find the radius x of the smaller circle?

3)

In the figure a circle touches all the sides of quadrilateral ABCD from the inside. The center of the circle is O. If $AD \perp DC$ and $BC = 38$, $QB = 27$, $DC = 25$ then find the radius of the circle?

4)

If AB and CD are the common tangents in the circles of two unequal (different) radii then show that $\text{seg } AB \cong \text{seg } CD$

5) Circles with centres A, B and C touch each other externally. If $AB = 36$, $BC = 32$, $CA = 30$, then find the radii of each circle.
