

DATE: 05/05/2024 Test Booklet Code

R6

Answers & Solutions

for

M.M.: 720

NEET (UG)-2024

Important Instructions:

Time: 3 hrs. 20 Min.

- 1. The test is of 3 hours 20 minutes duration and the Test Booklet contains 200 multiple-choice questions (four options with a single correct answer) from Physics, Chemistry and Biology (Botany and Zoology). 50 questions in each subject are divided into two Sections (A and B) as per details given below:
 - (a) **Section-A** shall consist of **35 (Thirty-five)** Questions in each subject (Question Nos-1 to 35, 51 to 85, 101 to 135 and 151 to 185). All Questions are compulsory.
 - (b) Section-B shall consist of 15 (Fifteen) questions in each subject (Question Nos- 36 to 50, 86 to 100, 136 to 150 and 186 to 200). In Section B, a candidate needs to attempt any 10 (Ten) questions out of 15 (Fifteen) in each subject.

Candidates are advised to read all 15 questions in each subject of Section B before they start attempting the question paper. In the event of a candidate attempting more than ten questions, the first ten questions answered by the candidate shall be evaluated.

- Each question carries 4 marks. For each correct response, the candidate will get 4 marks. For each incorrect response, one mark will be deducted from the total scores. The maximum marks are 720.
- 3. Use Blue / Black Ball Point Pen only for writing particulars on this page / marking responses on Answer Sheet.
- 4. Rough work is to be done in the space provided for this purpose in the Test Booklet only.
- On completion of the test, the candidate must hand over the Answer Sheet (ORIGINAL and OFFICE copy) to the Invigilator before leaving the Room / Hall. The candidates are allowed to take away this Test Booklet with them.
- 6. The CODE for this Booklet is R6. Make sure that the CODE printed on the Original Copy of the Answer Sheet is the same as that on this Test Booklet. In case of discrepancy, the candidate should immediately report the matter to the Invigilator for replacement of both the Test Booklet and the Answer sheet.
- 7. The candidates should ensure that the Answer Sheet is not folded. Do not make any stray marks on the Answer Sheet. Do not write your Roll No. anywhere else except in the specified space in the Test Booklet/Answer Sheet.
- 8. Use of white fluid for correction is NOT permissible on the Answer Sheet.
- 9. Each candidate must show on-demand his/her Admission Card to the Invigilator.
- 10. No candidate, without special permission of the Centre Superintendent or Invigilator, would leave his/her seat.
- 11. Use of Electronic/Manual Calculator is prohibited.
- 12. The candidates are governed by all Rules and Regulations of the examination with regard to their conduct in the Examination Room / Hall. All cases of unfair means will be dealt with as per Rules and Regulations of this examination.
- 13. No part of the Test Booklet and Answer Sheet shall be detached under any circumstances.
- The candidates will write the Correct Test Booklet Code as given in the Test Booklet / Answer Sheet in the Attendance Sheet.

PHYSICS

SECTION-A

1. In an ideal transformer, the turns ratio is $\frac{N_P}{N_S} = \frac{1}{2}$. The ratio V_S : V_P is equal to (the symbols carry their usual

meaning):

(1) 2:1

(2) 1:1

(3) 1:4

(4) 1:2

Answer (1)

Sol. According to transformer ratio,

$$\frac{V_{S}}{V_{P}} = \frac{N_{S}}{N_{P}} = 2:1$$

- 2. A tightly wound 100 turns coil of radius 10 cm carries a current of 7 A. The magnitude of the magnetic field at the centre of the coil is (Take permeability of free space as $4\pi \times 10^{-7}$ SI units):
 - (1) 4.4 T

(2) 4.4 mT

(3) 44 T

(4) 44 mT

Answer (2)

Sol. The magnitude of magnetic field due to circular coil of *N* turns is given by

$$B_C = \frac{\mu_0 i N}{2R}$$

$$=\frac{4\pi\!\times\!10^{-7}\!\times\!7\!\times\!100}{2\!\times\!0.1}$$

$$= 4.4 \times 10^{-3} \text{ T}$$

$$= 4.4 \text{ mT}$$

3. In a uniform magnetic field of 0.049 T, a magnetic needle performs 20 complete oscillations in 5 seconds as shown. The moment of inertia of the needle is $9.8 \times 10^{-6} \text{ kg m}^2$. If the magnitude of magnetic moment of the needle is $x \times 10^{-5} \text{ Am}^2$, then the value of 'x' is:

(1) $128\pi^2$

(2) $50\pi^2$

(3) $1280\pi^2$

(4) $5\pi^2$

Answer (3)

Sol. Time period of Oscillation, $T = 2\pi \sqrt{\frac{I}{MB}}$

$$\Rightarrow \quad \frac{1}{4} = 2\pi \sqrt{\frac{9.8 \times 10^{-6}}{M \times 0.049}}$$

$$\Rightarrow \frac{1}{16} = 4\pi^2 \times \frac{9.8 \times 10^{-6}}{M \times 49 \times 10^{-3}}$$

$$\Rightarrow M = \frac{4\pi^2 \times 9.8 \times 10^{-6}}{49 \times 10^{-3}} \times 16$$

$$= \frac{4\pi^2 \times 9.8 \times 16 \times 10^{-3}}{49}$$

$$= 12.8\pi^2 \times 10^{-3} \times 10^{-2} \times 10^2$$

$$= 1280\pi^2 \times 10^{-5} \text{ Am}^2$$

- 4. A thin flat circular disc of radius 4.5 cm is placed gently over the surface of water. If surface tension of water is 0.07 N m⁻¹, then the excess force required to take it away from the surface is
 - (1) 198 N

(2) 1.98 mN

(3) 99 N

(4) 19.8 mN

Answer (4)

Sol.

Excess force = $T \times 2\pi R$

$$= \frac{7}{100} \times 2 \times 3.14 \times \frac{4.5}{100}$$

- $= 19.8 \, \text{mN}$
- 5. A wheel of a bullock cart is rolling on a level road as shown in the figure below. If its linear speed is v in the direction shown, which one of the following options is correct (*P* and *Q* are any highest and lowest points on the wheel, respectively)?

- (1) Point P moves faster than point Q
- (2) Both the points P and Q move with equal speed

(3) Point P has zero speed

(4) Point P moves slower than point Q

Answer (1)

Sol. In the case of pure rolling,

The topmost point will have velocity 2v while point Q i.e. lowest point will have zero velocity. Hence point P moves faster than point Q.

- 6. If $x = 5\sin\left(\pi t + \frac{\pi}{3}\right)$ m represents the motion of a particle executing simple harmonic motion, the amplitude and time period of motion, respectively, are
 - (1) 5 m, 2 s

(2) 5 cm, 1 s

(3) 5 m, 1 s

(4) 5 cm, 2 s

Answer (1)

Sol.
$$x = 5\sin\left(\pi t + \frac{\pi}{3}\right)$$
m

Amplitude = 5 m

$$\omega = \pi = \frac{2\pi}{T}$$

$$T = \frac{2\pi}{\pi} = 2 s$$

- 7. A bob is whirled in a horizontal plane by means of a string with an initial speed of ω rpm. The tension in the string is T. If speed becomes 2ω while keeping the same radius, the tension in the string becomes:
 - (1) 4*T*

 $(2) \quad \frac{T}{4}$

(3) √27

(4) T

Answer (1)

$$T = m\ell\omega^2$$

$$T' = m\ell(2\omega)^2$$

$$T' = 4T$$

- 8. A wire of length 'I' and resistance 100 Ω is divided into 10 equal parts. The first 5 parts are connected in series while the next 5 parts are connected in parallel. The two combinations are again connected in series. The resistance of this final combination is:
 - (1) 52Ω

(2) 55Ω

(3) 60Ω

(4) 26Ω

Answer (1)

Sol

$$R = \frac{\rho l}{\Lambda}$$

$$R' = \frac{\rho I}{10A} = \frac{R}{10}$$

$$R_{\rm S} = 5 \times \frac{R}{10}$$
 [series]

$$R_S = 50$$

$$R_P = \frac{R}{50}$$
 [parallel]

$$R_{\text{eq}} = R_{\text{S}} + R_{P}$$
$$= 52 \,\Omega$$

Α	В	Y
0	0	1
0	1	0
1	0	1
1	1	0

The expression for the output Y is:

(1) $A.\overline{B} + \overline{A}$

(2) <u>B</u>

(3) B

(4) $A.B + \overline{A}$

Answer (2)

Α	В	Υ		
0	0	1		
0	1	0		
1	0	1		
1	1	0		
		0 0 0 1		

According to given truth table, output is independent on value of A

$$\therefore$$
 Output $Y = \overline{B}$

10. The quantities which have the same dimensions as those of solid angle are:

(1) stress and angle

(2) strain and arc

(3) angular speed and stress

(4) strain and angle

Answer (4)

Sol. Solid angle $d\Omega = \frac{dA}{r^2}$ has dimensions [M⁰L⁰T⁰]

Strain = $\frac{\Delta l}{l}$ has dimensions [M⁰L⁰T⁰]

Angle measured in radians is also dimensionless [M⁰L⁰T⁰]

$$\theta = \frac{I}{r}$$

11. A thin spherical shell is charged by some source. The potential difference between the two points *C* and *P* (in V) shown in the figure is:

(Take
$$\frac{1}{4\pi\epsilon_0} = 9 \times 10^9$$
 SI units)

(1) 1×10^5

(2) 0.5×10^5

(3) Zero

(4) 3 × 10⁵

Answer (3)

Sol. For uniformly charged spherical shell,

$$V = \frac{kq}{R}$$

(For $r \leq R$)

$$V_C = V_P$$

$$V_C - V_P = Zero$$

12. Match List-I with List-II.

List-I

(Material)

List-II

(Susceptibility (χ))

- A. Diamagnetic
 - Ferromagnetic
- C. Paramagnetic
- D. Non-magnetic

- I. $\chi = 0$
- II. $0 > \chi \ge -1$
- III. $\chi \gg 1$
- IV. $0 < \chi < \epsilon$ (a small positive number)

Choose the correct answer from the options given below

(1) A-II, B-I, C-III, D-IV

(2) A-III, B-II, C-I, D-IV

(3) A-IV, B-III, C-II, D-I

(4) A-II, B-III, C-IV, D-I

Answer (4)

Sol.

B.

(Material)		(Susceptibility (χ
Diamagnetic	(II)	$0>\chi\geq -1$
Ferromagnetic	(III)	χ >> 1
Paramagnetic	(IV)	$0 < \chi < \epsilon$

13. Match List I with List II.

Non-magnetic

	List I (Spectral Lines of Hydrogen for transitions from)		List II (Wavelengths (nm))
A.	$n_2 = 3$ to $n_1 = 2$	1.	410.2
В.	$n_2 = 4$ to $n_1 = 2$	II.	434.1
C.	$n_2 = 5$ to $n_1 = 2$	III.	656.3
D.	$n_2 = 6$ to $n_1 = 2$	IV.	486.1

Choose the correct answer from the options given below:

(1) A-III, B-IV, C-II, D-I

(2) A-IV, B-III, C-I, D-II

(3) A-I, B-II, C-III, D-IV

(4) A-II, B-I, C-IV, D-III

Answer (1)

Sol. Energy difference
$$\Delta E = \frac{hc}{\lambda}$$

$$\therefore \lambda \propto \frac{1}{\Delta E}$$

$$(\Delta E)_{6-2} > (\Delta E)_{5-2} > (\Delta E)_{4-2} > (\Delta E)_{3-2}$$

$$\lambda_{6-2}<\lambda_{5-2}<\lambda_{4-2}<\lambda_{3-2}$$

A-III, B-IV, C-II, D-I

14. Given below are two statements:

Statement I: Atoms are electrically neutral as they contain equal number of positive and negative charges.

Statement II: Atoms of each element are stable and emit their characteristic spectrum.

In the light of the above statements, choose the most appropriate answer from the options given below.

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both Statement I and Statement II are correct

Answer (2)

Sol. Statement I is true as atoms are electrically neutral because they contain equal number of positive and negative charges.

Statement II is wrong as atom of most of the elements are stable and emit characteristic spectrum. But this statement is not true for every atom.

- 15. An unpolarised light beam strikes a glass surface at Brewster's angle. Then
 - (1) The refracted light will be completely polarised.
 - (2) Both the reflected and refracted light will be completely polarised.
 - (3) The reflected light will be completely polarised but the refracted light will be partially polarised.
 - (4) The reflected light will be partially polarised.

Answer (3)

Sol.

According to Brewster's law, reflected rays are completely polarized and refracted rays are partially polarized.

16. The graph which shows the variation of $\left(\frac{1}{\lambda^2}\right)$ and its kinetic energy, E is (where λ is de Broglie wavelength of a free particle):

Answer (3)

Sol. de-Broglie wavelength $\lambda = \frac{h}{P} = \frac{h}{mv} = \frac{h}{\sqrt{2 mE}}$ where $E = \frac{1}{2}mv^2$

Squaring both sides,

$$\lambda^2 = \frac{h^2}{4m^2E}$$

$$\Rightarrow \frac{1}{\lambda^2} = \text{(constant) } E$$

Graph passes through origin with constant slope.

- 17. A particle moving with uniform speed in a circular path maintains:
 - (1) Constant acceleration

- (2) Constant velocity but varying acceleration
- (3) Varying velocity and varying acceleration
- (4) Constant velocity

Answer (3)

- **Sol.** A particle moving with uniform speed in a circular path maintains varying velocity and varying acceleration. It is because direction of both velocity as well as acceleration will change continuously.
- 18. If c is the velocity of light in free space, the correct statements about photon among the following are:
 - A. The energy of a photon is E = hv.
 - B. The velocity of a photon is c.
 - C. The momentum of a photon, $p = \frac{hv}{c}$.
 - D. In a photon-electron collision, both total energy and total momentum are conserved.
 - E. Photon possesses positive charge.

Choose the correct answer from the options given below:

(1) A, B, C and D only

(2) A, C and D only

(3) A, B, D and E only

(4) A and B only

Answer (1)

- Sol. (A) If c is the velocity of light
 - so, E = hv (Energy of photon)
 - (B) Velocity of photon is equal to velocity of light i.e. c.
 - (C) $\lambda = \frac{h}{p}$

$$p = \frac{h}{\lambda}$$

$$p = \frac{hv}{c}$$

- (D) In photon-electron collision both total energy and total momentum are conserved.
- 19. $\stackrel{290}{82}X \xrightarrow{\alpha} Y \xrightarrow{e^+} Z \xrightarrow{\beta^-} P \xrightarrow{e^-} Q$

In the nuclear emission stated above, the mass number and atomic number of the product Q respectively, are

(1) 286, 80

(2) 288, 82

(3) 286, 81

(4) 280, 81

Answer (3)

Sol.
$$^{290}_{82}X \xrightarrow{\alpha} ^{286}_{80}Y \xrightarrow{e^+} ^{286}_{79}Z \xrightarrow{\beta^-} ^{286}_{80}P \xrightarrow{e^-} ^{286}_{81}Q$$

$$A \rightarrow 286$$

$$Z = 81$$

20. In the following circuit, the equivalent capacitance between terminal A and terminal B is:

(1) 1 μF

(2) 0.5 μF

(3) 4 µF

(4) 2 μF

Answer (4)

Sol.

Given circuit is balanced Wheatstone bridge

$$C_{AB}$$
 = 1 + 1

$$= 2 \mu F$$

21. The terminal voltage of the battery, whose emf is 10 V and internal resistance 1 Ω , when connected through an external resistance of 4 Ω as shown in the figure is:

(1) 6 V

(2) 8 V

(3) 10 V

(4) 4 V

Answer (2)

Current in circuit
$$i = \frac{10}{4+1} = 2 \text{ A}$$

Terminal voltage =
$$E - iR$$

= $10 - 2 \times 1 = 8 \text{ V}$

- 22. If the monochromatic source in Young's double slit experiment is replaced by white light, then
 - (1) There will be a central dark fringe surrounded by a few coloured fringes
 - (2) There will be a central bright white fringe surrounded by a few coloured fringes
 - (3) All bright fringes will be of equal width
 - (4) Interference pattern will disappear

Answer (2)

Sol. At central point on screen, path difference is zero for all wavelength. So, central bright fringe is white and other fringes depend on wavelength as $\beta = \frac{\lambda D}{d}$.

Therefore, other fringes will be coloured.

23. A horizontal force 10 N is applied to a block A as shown in figure. The mass of blocks A and B are 2 kg and 3 kg respectively. The blocks slide over a frictionless surface. The force exerted by block A on block B is:

(1) 4 N

(2) 6 N

(3) 10 N

(4) Zero

Answer (2)

Sol.
$$F = (M_1 + M_2)a$$

$$a = \frac{10}{2+3} = 2 \ ms^{-2}$$

$$F' = M_2(2) = 3 \times 2 \text{ N} = 6 \text{ N}$$

24. A thermodynamic system is taken through the cycle abcda. The work done by the gas along the path bc is:

(1) 30 J

(2) -90 J

(3) -60 J

(4) Zero

Answer (4)

Sol. Path bc is an isochoric process.

- ... Work done by gas along path bc is zero.
- 25. The maximum elongation of a steel wire of 1 m length if the elastic limit of steel and its Young's modulus, respectively, are 8×10^8 N m⁻² and 2×10^{11} N m⁻², is:
 - (1) 0.4 mm

(2) 40 mm

(3) 8 mm

(4) 4 mm

Answer (4)

Sol. In the case for maximum elongation,

Stress = Elastic limit

$$\delta_{\text{max}} = \frac{\sigma_{\text{elastic}} \times L}{\text{Young's modulus}} = \frac{8 \times 10^8 \times 1}{2 \times 10^{11}} = 4 \times 10^{-3}$$

i.e. maximum elongation is 4 mm

26. The output (Y) of the given logic gate is similar to the output of an/a

(1) NOR gate

(2) OR gate

(3) AND gate

(4) NAND gate

Answer (3)

$$Y_1 = \overline{A \cdot A}$$

$$= \overline{A}$$

$$Y_2 = \overline{B + B}$$

$$= \bar{B}$$

$$Y=\overline{Y_1+Y_2}$$

$$=\overline{\overline{A}+\overline{B}}$$

$$= \overrightarrow{A} \cdot \overrightarrow{B}$$

= A.B is similar to output of AND Gate

- 27. Two bodies A and B of same mass undergo completely inelastic one dimensional collision. The body A moves with velocity v_1 while body B is at rest before collision. The velocity of the system after collision is v_2 . The ratio $v_1 : v_2$ is
 - (1) 2:1

(2) 4:1

(3) 1:4

(4) 1:2

Answer (1)

- **Sol.** Before collision $\Rightarrow \bigcirc A \rightarrow V_1$
- B

It undergoes completely inelastic collision

Using conservation of linear momentum

Initial momentum = Final momentum

$$\Rightarrow mv_1 = mv_2 + mv_2$$

$$\Rightarrow mv_1 = 2mv_2$$

$$\Rightarrow \frac{v_1}{v_2} = \frac{2}{1}$$

28. Consider the following statements A and B and identify the correct answer:

- A. For a solar-cell, the I-V characteristics lies in the IV quadrant of the given graph.
- B. In a reverse biased pn junction diode, the current measured in (μ A), is due to majority charge carriers.
- (1) A is incorrect but B is correct
- (2) Both A and B are correct

(3) Both A and B are incorrect

(4) A is correct but B is incorrect

Answer (4)

Sol. A: Solar cell characteristics

B: In reverse biased *pn* junction diode, the current measured in (μA), is due to minority charge carrier.

29.

Solenoid-1

Solenoid-2

In the above diagram, a strong bar magnet is moving towards solenoid-2 from solenoid-1. The direction of induced current in solenoid-1 and that in solenoid-2, respectively, are through the directions:

(1) BA and CD

(2) AB and CD

(3) BA and DC

(4) AB and DC

Answer (4)

Solenoid-

Solenoid-2

North of magnet is moving away from solenoid 1 so end *B* of solenoid 1 is South and as south of magnet is approaching solenoid 2 so end *C* of solenoid 2 is South.

30. Given below are two statements: one is labelled as **Assertion A** and the other is labelled as **Reason R**.

Assertion A: The potential (V) at any axial point, at 2 m distance (r) from the centre of the dipole of dipole moment vector \vec{P} of magnitude, 4×10^{-6} C m, is $\pm 9 \times 10^{3}$ V.

(Take
$$\frac{1}{4\pi \in 0}$$
 = 9 × 10⁹ SI units)

Reason R: $V = \pm \frac{2P}{4\pi \in_0 r^2}$, where r is the distance of any axial point, situated at 2 m from the centre of the

dipole.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both A and R are true and R is NOT the correct explanation of A.
- (2) A is true but R is false.
- (3) A is false but R is true.
- (4) Both A and R are true and R is the correct explanation of A.

Answer (2)

Sol. The potential *V* at any point, at distance *r* from centre of dipole = $\frac{KP\cos\theta}{r^2}$

At axial point where
$$\theta = 0^{\circ}$$
, $V = \frac{KP}{r^2} = \frac{9 \times 10^9 \times 4 \times 10^{-6}}{2^2} = 9 \times 10^3 \text{ V}$

At axial point where
$$\theta = 180^{\circ}$$
, $V = \frac{-KP}{r^2} = -9 \times 10^3 \text{ V}$

31. At any instant of time t, the displacement of any particle is given by 2t – 1 (SI unit) under the influence of force of 5 N. The value of instantaneous power is (in SI unit):

(1) 5

(2) 7

(3) 6

(4) 10

Answer (4)

Sol.
$$x = 2t - 1$$

$$v = \frac{dx}{dt} = 2 \text{ m s}^{-1}$$

$$P = F. v$$

- 32. In a vernier callipers, (N + 1) divisions of vernier scale coincide with N divisions of main scale. If 1 MSD represents 0.1 mm, the vernier constant (in cm) is:
 - (1) $\frac{1}{100(N+1)}$

(2) 100N

(3) 10(N+1)

 $(4) \quad \frac{1}{10N}$

Answer (1)

Sol. V.C = MSD - VSD

given: (N + 1) VSD = N MSD

$$VSD = \left(\frac{N}{N+1}\right) MSD$$

From (1) and (2)

$$V.C = (MSD) - \frac{N}{N+1}(MSD)$$

$$= MSD \left(1 - \frac{N}{N+1} \right) = \frac{MSD}{N+1}$$

$$=\frac{0.01}{N+1}=\frac{1}{100(N+1)}$$

- 33. The moment of inertia of a thin rod about an axis passing through its mid point and perpendicular to the rod is 2400 g cm². The length of the 400 g rod is nearly:
 - (1) 17.5 cm

(2) 20.7 cm

(3) 72.0 cm

(4) 8.5 cm

Answer (4)

Sol. Moment of inertia of rod = $I = \frac{m\ell^2}{12}$

$$\Rightarrow 2400 = 400 \frac{\ell^2}{12}$$

$$\Rightarrow$$
 72 = ℓ^2

$$\Rightarrow \ell = \sqrt{72} = 8.48 \text{ cm} \approx 8.5 \text{ cm}$$

34. A light ray enters through a right angled prism at point *P* with the angle of incidence 30° as shown in figure. It travels through the prism parallel to its base *BC* and emerges along the face *AC*. The refractive index of the prism is:

(1) $\frac{\sqrt{5}}{2}$

(2) $\frac{\sqrt{3}}{4}$

(3) $\frac{\sqrt{3}}{2}$

(4) $\frac{\sqrt{5}}{4}$

Answer (1)

Sol.

In prism,
$$r_1 + c = A$$

$$r_1 = 90^{\circ} - c$$
 ...(1

$$r_1 = 90^{\circ} - c \qquad \dots (1)$$

$$\sin c = \frac{1}{\mu} \Rightarrow \cos c = \frac{\sqrt{\mu^2 - 1}}{\mu}$$

$$\Rightarrow \text{Apply Spell's law on incidence}$$

⇒ Apply Snell's law, on incidence surface

$$1 \cdot \sin 30^{\circ} = \mu \sin(r_1) \Rightarrow 1 \times \frac{1}{2} = \mu \times \sin(90^{\circ} - c)$$

$$\frac{1}{2} = \mu \times \frac{\sqrt{\mu^2 - 1}}{\mu}$$

On squaring
$$\frac{1}{4} = \mu^2 - 1$$

$$\Rightarrow \quad \mu^2 = \frac{5}{4} \quad \Rightarrow \quad \mu = \frac{\sqrt{5}}{2}$$

35. The mass of a planet is $\frac{1}{10}$ that of the earth and its diameter is half that of the earth. The acceleration due to gravity on that planet is:

Answer (3)

Sol.
$$g' = \frac{GM'}{R'^2} = \frac{GM}{10(\frac{R}{2})^2}$$
$$= \frac{4}{10} \frac{GM}{R^2} = 0.4 \times 9.8$$
$$= 3.92 \text{ m s}^{-2}$$

SECTION-B

- 36. The property which is not of an electromagnetic wave travelling in free space is that:
 - (1) The energy density in electric field is equal to energy density in magnetic field
 - They travel with a speed equal to $\frac{1}{\sqrt{\mu_0 \epsilon_0}}$
 - They originate from charges moving with uniform speed
 - (4) They are transverse in nature

Answer (3)

Sol. The EM waves originate from an accelerating charge. The charge moving with uniform velocity produces steady state magnetic field.

37. The velocity (v) – time (t) plot of the motion of a body is shown below:

The acceleration (a) – time (t) graph that best suits this motion is :

Answer (2)

Sol. Initially, the body has zero velocity and zero slope. Hence the acceleration would be zero initially. After that, the slope of v-t curve is constant and positive.

After some time, velocity becomes constant and acceleration is zero.

After that, the slope of v-t curve is constant and negative.

38. A metallic bar of Young's modulus, 0.5×10^{11} N m⁻² and coefficient of linear thermal expansion 10^{-5} °C⁻¹, length 1 m and area of cross-section 10^{-3} m² is heated from 0°C to 100°C without expansion or bending. The compressive force developed in it is:

(1)
$$50 \times 10^3 \text{ N}$$

(3)
$$2 \times 10^3 \text{ N}$$

Answer (1)

Sol. Thermal strain = Longitudinal strain = $\alpha \Delta T$

$$\Rightarrow$$
 Longitudinal strain, $\delta = 10^{-5} \times 10^{2} = 10^{-3}$

$$\Rightarrow$$
 Compressive stress = δ × Young's Modulus

$$= 10^{-3} \times 0.5 \times 10^{11}$$

$$= 0.5 \times 10^{8}$$

$$\Rightarrow$$
 Compressive force = $0.5 \times 10^8 \times 10^{-3} = 0.5 \times 10^5$

$$= 5 \times 10^4 \times \frac{10}{10}$$

$$= 50 \times 10^3 \text{ N}$$

- 39. If the mass of the bob in a simple pendulum is increased to thrice its original mass and its length is made half its original length, then the new time period of oscillation is $\frac{x}{2}$ times its original time period. Then the value of x is:
 - (1) √2

(2) 2√3

(3) 4

(4) √3

Answer (1)

Sol.
$$T' = 2\pi \sqrt{\frac{\ell'}{g}}$$
 where $\ell' = \frac{\ell}{2}$

$$T=2\pi\sqrt{rac{\ell}{g}}$$

$$T' = \frac{x}{2}T$$

$$2\pi\sqrt{\frac{\ell}{2g}} = \frac{x}{2}2\pi\sqrt{\frac{\ell}{g}}$$

$$\frac{1}{\sqrt{2}} = \frac{x}{2} \implies x = \sqrt{2}$$

40. Choose the correct circuit which can achieve the bridge balance.

Answer (4)

Sol. In option (4),

$$\frac{10}{15} = \frac{10}{5 + R_D}$$

The diode can conduct and have resistance R_D = 10 Ω because diode have dynamic resistance. In that case bridge will be balanced.

- 41. A force defined by $F = \alpha t^2 + \beta t$ acts on a particle at a given time t. The factor which is dimensionless, if α and β are constants, is:
 - (1) at/

(2) αβ*t*

(3) $\alpha\beta/t$

(4) $\frac{\beta t}{\alpha}$

Answer (1)

Sol. From principle of homogeneity

$$[F] = [\alpha t^2] = [\beta t]$$

$$[\alpha] = \frac{[F]}{[t^2]}$$
 and $[\beta] = \frac{[F]}{[t]}$

$$\therefore$$
 [\alpha] [t] = [\beta]

$$\therefore \quad \frac{\alpha t}{\beta} = \text{dimensionless}$$

- A parallel plate capacitor is charged by connecting it to a battery through a resistor. If I is the current in the 42. circuit, then in the gap between the plates:
 - Displacement current of magnitude equal to I flows in the same direction as I
 - Displacement current of magnitude equal to I flows in a direction opposite to that of I
 - Displacement current of magnitude greater than I flows but can be in any direction
 - There is no current

Answer (1)

Sol.

According to modified Ampere's law

$$\oint B. \, dI = \mu_0 (I_C + I_D)$$

For Loop L₁

$$I_C \neq 0$$
 and $I_D = 0$

For Loop L2

$$I_C = 0$$
 and $I_D \neq 0$

Due to KCL

$$I_C = I_D$$

- An iron bar of length L has magnetic moment M. It is bent at the middle of its length such that the two arms 43. make an angle 60° with each other. The magnetic moment of this new magnet is :
 - (1) 2

(2) 2M

Answer (1)

$$\Delta I = 2\frac{I}{2}\sin 30^{\circ}$$

$$=\frac{1}{2}$$

$$M' = ml/2$$

$$= M/2$$

DLUTIONIZING EDUCATION. TRANSFORMING INDIA.

$$(1) \quad \frac{2GmM}{3R}$$

(2)
$$\frac{GmM}{2R}$$

$$(3) \quad \frac{GmM}{3R}$$

$$(4) \quad \frac{5GmM}{6R}$$

Answer (4)

Sol. Apply energy conservation,

$$U_i + K_i = U_f + K_f$$

$$\Rightarrow \quad -\frac{GMm}{R} + K_i = -\frac{GMm}{3R} + \frac{1}{2}mv^2$$

$$\Rightarrow \quad -\frac{GMm}{R} + K_i = -\frac{GMm}{3R} + \frac{1}{2} \times m \times \frac{GM}{3R}$$

$$\Rightarrow \quad K_i = -\frac{1}{6} \frac{GMm}{R} + \frac{GMm}{R}$$

$$K_i = \frac{5}{6} \frac{GMm}{R}$$

45. If the plates of a parallel plate capacitor connected to a battery are moved close to each other, then

- A. the charge stored in it, increases.
- B. the energy stored in it, decreases.
- C. its capacitance increases.
- D. the ratio of charge to its potential remains the same.
- E. the product of charge and voltage increases.

Choose the most appropriate answer from the options given below:

(1) A, C and E only

(2) B, D and E only

(3) A, B and C only

(4) A, B and E only

Answer (1)

Sol. Given V' = V =Constant

(i)
$$C' = \frac{\varepsilon_0 A}{d'}, C = \frac{\varepsilon_0 A}{d}$$

Hence, final capacitance greater than initial capacitance,

(ii)
$$U' = \frac{1}{2}C'V^2$$

$$U=\frac{1}{2}CV^2$$

Hence final energy is greater than initial energy

(iii)
$$\frac{Q'}{V'} = C'$$
 and $\frac{Q}{V} = C$

$$\frac{Q'}{V'} \neq \frac{Q}{V}$$

$$X' = Q'V = C'V^2$$

$$X = QV = CV^2$$

46. The following graph represents the T-V curves of an ideal gas (where T is the temperature and V the volume) at three pressures P_1 , P_2 and P_3 compared with those of Charles's law represented as dotted lines.

Then the correct relation is:

(1)
$$P_1 > P_3 > P_2$$

(2)
$$P_2 > P_1 > P_3$$

(3)
$$P_1 > P_2 > P_3$$

(4)
$$P_3 > P_2 > P_1$$

Answer (3)

Sol. At same temperature, curve with higher volume corresponds to lower pressure.

$$V_3 > V_2 > V_1$$

$$\Rightarrow P_1 > P_2 > P_3$$

(We draw a straight line parallel to volume axis to get this)

47. Two heaters A and B have power rating of 1 kW and 2 kW, respectively. Those two are first connected in series and then in parallel to a fixed power source. The ratio of power outputs for these two cases is:

Answer (1)

Sol. Power Consumed =
$$P = \frac{V^2}{R}$$

$$\frac{P_A}{P_B} = \frac{R_B}{R_A}$$

$$R_A = 2R_B$$

For Series Combination

$$P_{S} = \frac{V^2}{3R_B}$$

For Parallel Combination

$$P_P = \frac{3V^2}{2R_B}$$

$$\frac{P_S}{P_D} = \frac{2}{9}$$

- 48. A sheet is placed on a horizontal surface in front of a strong magnetic pole. A force is needed to:
 - hold the sheet there if it is magnetic.
 - bold the sheet there if it is non-magnetic.
 - C. move the sheet away from the pole with uniform velocity if it is conducting.
 - D. move the sheet away from the pole with uniform velocity if it is both, non-conducting and non-polar.

Choose the correct statement(s) from the options given below:

(1) A and C only

(2) A, C and D only

(3) Conly

(4) B and D only

Answer (1)

Sol.

- A. A magnetic pole will repel or attract magnetic sheet so force is need.
- B. If sheet is non-magnetic, no force needed.
- C. If it is conducting, then there will be addy current in sheet, which opposes the motion. So forces is needed move sheet with uniform speed.
- D. The non-conducting and non-polar sheet do not interact with magnetic field of magnet.
- 49. A small telescope has an objective of focal length 140 cm and an eye piece of focal length 5.0 cm. The magnifying power of telescope for viewing a distant object is:
 - (1) 28

(2) 17

(3) 32

(4) 34

Answer (1)

Sol. f_0 = 140 cm and f_e = 5 cm

For distant object,

$$m = \frac{f_0}{f_e} = \frac{140}{5} = 28$$

50. A 10 μ F capacitor is connected to a 210 V, 50 Hz source as shown in figure. The peak current in the circuit is nearly (π = 3.14):

(1) 0.93 A

(2) 1.20 A

(3) 0.35 A

(4) 0.58 A

Answer (1)

Sol. Capacitive Reactance
$$X_C = \frac{1}{\omega C} = \frac{1}{2\pi fC} = \frac{1}{2 \times 3.14 \times 50 \times 10 \times 10^{-6}} = \frac{1000}{2 \times 3.14 \times 50 \times 10 \times 10^{-6}}$$

$$i_{\rm rms} = \frac{V_{\rm rms}}{X_{\rm C}} = \frac{210}{X_{\rm C}}$$

Peak current =
$$\sqrt{2}i_{rms} = \sqrt{2} \times \frac{210}{1000} \times 3.14 = 0.932$$

= 0.93 A

CHEMISTRY

SECTION-A

51. The compound that will undergo S_N1 reaction with the fastest rate is

Answer (3)

Sol. Reactivity towards S_N1 depends upon stability of carbocation.

Order of stability is

- 52. The highest number of helium atoms is in
 - (1) 4 u of helium

- (2) 4 g of helium
- (3) 2.271098 L of helium at STP
- (4) 4 mol of helium

Answer (4)

Sol. (1) 4 u of He =
$$\frac{4 \text{ u}}{4 \text{ u}}$$
 = 1 He atom

(2) 4 g of Helium =
$$\frac{4 \text{ g}}{4 \text{ g}}$$
 mole = 1 mole = N_A He atom

(3) 2.2710982 of He at STP =
$$\frac{2.271}{22.710982}$$
 mole

(4) 4 mol of He = $4 N_A$ He atoms

- 53. In which of the following processes entropy increases?
 - A. A liquid evaporates to vapour.
 - B. Temperature of a crystalline solid lowered from 130 K to 0 K.
 - C. $2NaHCO_{3(s)} \rightarrow Na_2CO_{3(s)} + CO_{2(g)} + H_2O_{(g)}$
 - D. $Cl_{2(g)} \rightarrow 2Cl_{(g)}$

Choose the correct answer from the options given below:

- (1) A, B and D
- (2) A, C and D
- (3) C and D
- (4) A and C

Answer (2)

Sol. When a liquid evaporates to vapour entropy increases.

$$2NaHCO_{3(s)} \rightarrow Na_2CO_{3(s)} + CO_{2(g)} + H_2O_{(g)}$$

Number of gaseous product molecules increases so entropy increases.

$$Cl_{2(g)} \rightarrow 2Cl_{(g)}$$

1 mole Cl_{2(g)} form 2 mol Cl_(g). So entropy increases.

54. Intramolecular hydrogen bonding is present in

NO,

Answer (4)

Sol. In o-nitrophenol intramolecular H-bonding is present.

- 55. The energy of an electron in the ground state (n = 1) for He $^+$ ion is -x J, then that for an electron in n = 2 state for Be $^{3+}$ ion in J is
 - (1) $-\frac{x}{9}$

(2) -4x

(3) $-\frac{4}{9}x$

(4) ->

Answer (4)

Sol.
$$E_n = -R_H \left(\frac{Z^2}{n^2} \right) J$$

For He^{+} (n = 1),

$$E_n = -x = -R_H \left(\frac{2^2}{1^2} \right) = -4R_H$$

$$\therefore$$
 $R_H = \frac{x}{4}$

For Be $^{3+}$ (n = 2),

$$\begin{split} E_n &= -R_H \Bigg(\frac{Z^2}{n^2}\Bigg) J \\ &= -\frac{x}{4} \times \Bigg(\frac{4 \times 4}{2 \times 2}\Bigg) = -x \ J \end{split}$$

- 56. The E° value for the Mn³+/Mn²+ couple is more positive than that of Cr³+/Cr²+ or Fe³+/Fe²+ due to change of
 - (1) d5 to d2 configuration

(2) d4 to d5 configuration

(3) d³ to d⁵ configuration

(4) d5 to d4 configuration

Answer (2)

Sol.
$$E_{Mn^{3+}/Mn^{2+}}^{\circ} > E_{Cr^{3+}/Cr^{2+}}^{\circ}$$
 or $E_{Fe^{3+}/Fe^{2+}}^{\circ}$

Electronic configuration of Mn3+ = [Ar]3d4

Electronic configuration of Mn2+ = [Ar]3d5

Electronic configuration of Cr3+ = [Ar]3d3

Electronic configuration of Cr2+ = [Ar]3d4

As Mn³⁺ from d^4 configuration goes to more stable d^5 configuration (Half filled), due to more exchange energy in d^5 configuration.

- 57. A compound with a molecular formula of C₆H₁₄ has two tertiary carbons. Its IUPAC name is:
 - (1) 2-methylpentane

(2) 2,3-dimethylbutane

(3) 2,2-dimethylbutane

(4) n-hexane

Answer (2)

(n-Hexane)

$$H_3^5$$
C CH_2 CH_2 CH_3 has only one tertiary carbon CH_3

(2-Methylpentane)

$$H_3$$
¹C - $\overset{2}{C}H$ - $\overset{3}{C}H$ - $\overset{4}{C}H_3$ has two tertiary carbon. $\overset{1}{C}H_3$ $\overset{1}{C}H_3$

(2, 3-Dimethylbutane)

$$CH_3$$
 $H_3C-C-CH_2-CH_3$ has no tertiary carbon CH_3

(2, 2-Dimethylbutane)

58. Given below are two statements:

Statement I: The boiling point of three isomeric pentanes follows the order

n-pentane > isopentane > neopentane

Statement II: When branching increases, the molecule attains a shape of sphere. This results in smaller surface area for contact, due to which the intermolecular forces between the spherical molecules are weak, thereby lowering the boiling point.

In the light of the above statements, choose the most appropriate answer from the options given below:

- (1) Both Statement I and Statement II are incorrect
- (2) Statement I is correct but Statement II is incorrect
- (3) Statement I is incorrect but Statement II is correct
- (4) Both Statement I and Statement II are correct

Answer (4)

Sol. Both statement I and statement II are correct.

Boiling point of n-pentane = 309 K

isopentane = 301 K

neopentane = 282.5

As branching increases molecules attain the shape of a sphere results in smaller area of contact thus weak intermolecular forces between spherical molecules, which are overcome at relatively lower temperature. Leading to decrease in boiling point.

59. Identify the correct reagents that would bring about the following transformation.

$$\bigcirc$$
 CH₂ - CH = CH₂ \rightarrow CH₂ - CH₂ - CHO

- (1) (i) BH₃
 - (ii) H₂O₂ / OH
 - (iii) PCC
- (2) (i) BH₃
 - (ii) H_2O_2/OH
 - (iii) alk.KMnO₄
 - (iv) H₃O[⊕]
- (3) (i) H₂O/H⁺
 - (ii) PCC
- (4) (i) H₂O/H⁺
 - (ii) CrO₃

Answer (1)

Sol.
$$CH_2 - CH = CH_2 \xrightarrow{\text{(ii) BH}_3} CH_2 - CH_2 - CH_2 - CH_2 - CH_2$$

Mechanism:

Mechanism:

$$CH_2 - CH = CH_2 + (H - BH_2)_3 \longrightarrow CH_2 - CH - CH_2$$

$$H BH_2$$

$$CH_2 - CH = CH_2$$

$$CH_2 - CH_2 - CH_2 - CH_2$$

$$CH_2 - CH_2 - CH_2$$

60. Which plot of $\ln k$ vs $\frac{1}{T}$ is consistent with Arrhenius equation?

Answer (3)
Sol. The Arrhenius equation is given as

$$k = Ae^{\frac{E_a}{RT}}$$

$$\therefore \ln k = \ln A - \frac{E_a}{RT}$$

In k v/s $\frac{1}{T}$ gives a straight line graph with slope = $-\frac{E_a}{R}$ and intercept = In A

61. The most stable carbocation among the following is:

Answer (3)

Sol. The stability of carbocation can be described by the hyperconjugation. Greater the extent of hyperconjugation, more is the stability of carbocation.

(1)
$$H_3C$$
 CH_2
 CH_3
 CH_3
 CH_3
 CH_3
 CH_3
 CH_3

Stability order of carbocations = (4) > (2) > (1) > (2)

62. Match List I with List II.

List-I

(Process)

A. Isothermal process

B. Isochoric process

- C. Isobaric process
- D. Adiabatic process

List-II

(Conditions)

- (Conditions)
- No heat exchange
- II. Carried out at constant temperature
- III. Carried out at constant volume
- Carried out at constant pressure

Choose the correct answer from the options given below:

(1) A-IV, B-II, C-III, D-I

(2) A-I, B-II, C-III, D-IV

(3) A-II, B-III, C-IV, D-I

(4) A-IV, B-III, C-II, D-I

Answer (3)

- Sol. (A) Isothermal process \Rightarrow Temperature is constant throughout the process
 - (B) Isochoric process ⇒ Volume is constant throughout the process
 - (C) Isobaric process \Rightarrow Pressure is constant throughout the process
 - (D) Adiabatic process \Rightarrow No exchange of heat (q) between system and surrounding

63. Match List I with List II.

List I (Complex)

- [Co(NH₃)₅(NO₂)]Cl₂
- B. [Co(NH₃)₅(SO₄)]Br
- C. [Co(NH₃)₆][Cr(CN)₆]
- D. [Co(H₂O)₆]Cl₃

List II (Type of isomerism)

- I. Solvate isomerism
- 11. Linkage isomerism
- III. Ionization isomerism
- Coordination isomerism

Choose the correct answer from the options given below:

- A-I, B-III, C-IV, D-II
- (3) A-II, B-IV, C-III, D-I

- (2) A-I, B-IV, C-III, D-II
- (4) A-II, B-III, C-IV, D-I

Answer (4)

- Sol. A. [Co(NH₃)₅(NO₂)]Cl₂
 - B. [Co(NH₃)₅(SO₄)]Br C. [Co(NH₃)₆][Cr(CN)₆]
 - D. [Co(H₂O)₆]Cl₃

- Linkage isomerism due to 'N' and 'O' linkage by NO₂
- III. Ionization isomerism
- IV. Coordination isomerism
- Solvate isomerism
- 64. 1 gram of sodium hydroxide was treated with 25 mL of 0.75 M HCl solution, the mass of sodium hydroxide left unreacted is equal to
 - (1) 250 mg

Zero mg

(3) 200 mg

750 mg

Answer (1)

$$\textbf{Sol.} \ \ M = \frac{W \times 1000}{M_2 \times V \ (\text{in mL})}$$

$$W = \frac{M \times M_2 \times V \text{ (in mL)}}{1000} = \frac{0.75 \times 36.5 \times 25}{1000}$$

= 0.684 g (Mass of HCI)

$$HCI + NaOH \longrightarrow HCI + NaOH$$
36.5 g 40 g

36.5 g HCl reacts with NaOH = 40 g

0.684 g HCl reacts with NaOH =
$$\frac{40}{36.5} \times 0.684 = 0.750$$
 g

Amount of NaOH left = 1 g - 0.750 g = 0.250 g = 250 mg

- 65. Which reaction is NOT a redox reaction?
 - (1) $2KCIO_3 + I_2 \rightarrow 2KIO_3 + CI_2$

- (2) $H_2 + Cl_2 \rightarrow 2HCl$
- (3) BaCl₂ + Na₂SO₄ → BaSO₄ + 2NaCl
- (4) $Zn + CuSO_4 \rightarrow ZnSO_4 + Cu$

Answer (3)

Sol. (1) KClO₃ +
$$I_2^0 \longrightarrow 2KlO_3 + Cl_2^0$$
, Redox reaction
Oxidation

(2)
$$H_2^0 + Cl_2^0 \longrightarrow 2HCI^{-1}$$
, Redox reaction Oxidation

(3)
$$BaCl_2^{-1} + Na_2SO_4^{-2} \longrightarrow BaSO_4 + 2NaCl_4^{-1}$$

This is not a redox reaction as there is no change in oxidation state.

For the reaction $2A \rightleftharpoons B + C$, $K_C = 4 \times 10^{-3}$. At a given time, the composition of reaction mixture is: $[A] = [B] = [C] = 2 \times 10^{-3} \text{ M}$.

Then, which of the following is correct?

- (1) Reaction has a tendency to go in forward direction.
- (2) Reaction has a tendency to go in backward direction.
- (3) Reaction has gone to completion in forward direction.
- (4) Reaction is at equilibrium.

Answer (2)

Sol.
$$2A \rightleftharpoons B + C$$
, $K_C = 4 \times 10^{-3}$

At a given time t, Q_C is to be calculated and been compared with K_C.

$$Q_{c} = \frac{[B][C]}{[A]^{2}} = \frac{(2 \times 10^{-3})(2 \times 10^{-3})}{(2 \times 10^{-3})^{2}}$$

 $Q_C = 1$

As Q_C > K_C, so reaction has a tendency to move backward.

67. Match List I with List II.

List I

	(Compound)		(Shape/geometry)
A.	NH ₃	1.	Trigonal Pyramidal
B.	BrF ₅	II.	Square Planar
C.	XeF ₄	III.	Octahedral
D.	SF ₆	IV.	Square Pyramidal

List II

Choose the correct answer from the options given below:

- (1) A-II, B-IV, C-III, D-I
- (2) A-III, B-IV, C-I, D-II
- (3) A-II, B-III, C-IV, D-I
- (4) A-I, B-IV, C-II, D-III

Answer (4)

Sol. NH₃ \Rightarrow sp³ hybridised with 1 lone pair.

Structure will be Trigonal Pyramidal.

 $BrF_5 \Rightarrow sp^3d^2$ hybridised with 1 lone pair.

Structure will be Square Pyramidal.

 $XeF_4 \Rightarrow sp^3d^2$ with two lone pairs.

Structure will be Square Planar.

 $SF_6 \Rightarrow sp^3d^2$ with no lone pair.

Structure will be Octahedral.

A-I, B-IV, C-II, D-III

68. On heating, some solid substances change from solid to vapour state without passing through liquid state.

The technique used for the purification of such solid substances based on the above principle is known as

(1) Sublimation

(2) Distillation

(3) Chromatography

(4) Crystallization

Answer (1)

- **Sol.** (1) **Sublimation**: It is the purification technique based on principle that on heating, some solid substances change from solid to vapour state without passing through liquid state.
 - (2) **Distillation**: It is used to separate volatile liquids from non-volatile impurities and the liquids having sufficient difference in their boiling point.
 - (3) Chromatography: It is based on separation by using stationary and mobile phase.
 - (4) **Crystallization :** It is based on difference in the solubilities of the compound and impurities in a suitable solvent.
- 69. In which of the following equilibria, Kp and Kc are **NOT** equal?

(1)
$$H_{2(g)} + I_{2(g)} \rightleftharpoons 2HI_{(g)}$$

(2)
$$CO_{(g)} + H_2O_{(g)} \rightleftharpoons CO_{2(g)} + H_{2(g)}$$

$$(3) \quad 2\text{BrCl}_{(g)} \rightleftharpoons \text{Br}_{2(g)} + \text{Cl}_{2(g)}$$

(4)
$$PCl_{5(g)} \rightleftharpoons PCl_{3(g)} + Cl_{2(g)}$$

Answer (4)

Sol.
$$K_p = K_c (RT)^{\Delta n} g$$

$$\text{ for } K_p \neq K_c,$$

$$\Delta n_g \neq 0$$

$$\Delta n_g = n_p - n_r$$

(1)
$$\Delta n_g = 2 - 2 = 0$$

(2)
$$\Delta n_g = 2 - 2 = 0$$

(3)
$$\Delta n_g = 2 - 2 = 0$$

(4)
$$\Delta n_0 = 2 - 1 = 1$$

70. Among Group 16 elements, which one does NOT show -2 oxidation state?

(1) Se

(2) Te

(3) Po

(4) 0

Answer (3)

Sol. Oxygen shows -2, -1, +1 and +2 oxidation states

Selenium shows -2, +2, +4 and +6 oxidation states

Tellurium shows -2, +2, +4 and +6 oxidation states

Polonium shows +2 and +4 oxidation states

71. Given below are two statements:

Statement I: The boiling point of hydrides of Group 16 elements follow the order

 $H_2O > H_2Te > H_2Se > H_2S$.

Statement II: On the basis of molecular mass, H₂O is expected to have lower boiling point than the other members of the group but due to the presence of extensive H-bonding in H₂O, it has higher boiling point.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (4)

Sol. Statement I is correct, because boiling point of hydrides of group 16 follows the order

 $H_2O > H_2Te > H_2Se > H_2S$.

Statement II due to intermolecular H-bonding H₂O shows higher boiling point than respective hydrides of group 16.

(Both Statement are true)

Order from H₂Te to H₂S is due to decreasing molar mass.

72. Given below are two statements:

Statement I: Aniline does not undergo Friedel-Crafts alkylation reaction.

Statement II: Aniline cannot be prepared through Gabriel synthesis.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is correct but Statement II is false
- (3) Statement I is incorrect but Statement II is true
- (4) Both statement I and Statement II are true

Answer (4)

- **Sol.** Aniline does not undergo Friedel-Crafts alkylation reaction due to salt formation with aluminium chloride, the Lewis acid, which is used as a catalyst.
 - Aniline (aromatic primary amine) cannot be prepared by Gabriel phthalimide synthesis because aryl halides do not undergo nucleophilic substitution with anion formed by phthalimide.

73.	Oirean	balann		4		
13.	(iven	DEIOW	are	TMA	statements	

Statement I: Both [Co(NH₃)₆]³⁺ and [CoF₆]³⁻ complexes are octahedral but differ in their magnetic behaviour.

Statement II: [Co(NH₃)₆]³⁺ is diamagnetic whereas [CoF₆]³⁻ is paramagnetic.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (4)

Sol. In [Co(NH₃)₆]³⁺, Co³⁺ ion is having 3d⁶ configuration.

Electronic configuration of Co3+:	11	1	1	1	1		
			3d			4s	4p

In presence of NH₃ ligand, pairing of electrons takes place and it becomes diamagnetic complex ion.

:. [Co(NH₃)₆]³⁺ is octahedral with d²sp³ hybridisation and it is diamagnetic in nature.

In case of [CoF₆]³⁻, Co is in +3 oxidation state and it is having 3d⁶ configuration.

In presence of weak field F- ligand, pairing does not take place.

∴ In [CoF₆]³⁻, Co³⁺ is sp³d² hybridised with four unpaired electrons, so it is paramagnetic in nature.

74. Fehling's solution 'A' is

- (1) alkaline copper sulphate
- (2) alkaline solution of sodium potassium tartrate (Rochelle's salt)
- (3) aqueous sodium citrate
- (4) aqueous copper sulphate

Answer (4)

Sol. Fehling solution 'A' = Aqueous copper sulphate

Fehling solution 'B' = Alkaline sodium potassium tartrate (Rochelle salt)

- 75. The Henry's law constant (K_H) values of three gases (A, B, C) in water are 145, 2×10^{-5} and 35 kbar, respectively. The solubility of these gases in water follow the order:
 - (1) B>C>A

(2) A > C > B

(3) A > B > C

(4) B > A > C

Answer (1)

Sol. Value of Henry's law constant $\propto \frac{1}{\text{Solubility of gas}}$

Higher the value of K_H at a given pressure, lower is the solubility of the gas in the liquid.

KH value of gases (given): A > C > B

.. Order of solubility of gases in water : B > C > A

List I

(Conversion)

- 1 mol of H₂O to O₂
- 1 mol of MnO₄ to Mn²⁺
- 1.5 mol of Ca from molten CaCl2
- 1 mol of FeO to Fe₂O₃

List II

(Number of Faraday required)

- 2F 11.
- 1F III.
- 5F

Choose the correct answer from the options given below:

- (1) A-III, B-IV, C-I, D-II
- (2) A-II, B-III, C-I, D-IV
- (3) A-III, B-IV, C-II, D-I
- (4) A-II, B-IV, C-I, D-III

Answer (4)

Sol.
$$4OH^- \rightarrow 2H_2O + O_2 + 4e^-$$

for 2 mole of H₂O = 4F charge is required

for 1 mole of
$$H_2O = \frac{4F}{2} = 2F$$
 required

$$\overset{^{+7}}{\text{Mn}}\text{O}_{4}^{-}\rightarrow \overset{^{+2}}{\text{Mn}}^{2+}$$

for 1 mole MnO₄ 5F charge is required

For 1 mole Ca2+ ion required = 2F

1.5 mole Ca²⁺ ion required =
$$\frac{2}{1} \times 1.5 = 3F$$

$$\overset{^{+2}}{\text{FeO}} \rightarrow \overset{^{+3}}{\text{Fe}_2}\text{O}_3$$

for 1 mole FeO, 1F charge is required.

77. Match List I with List II

List I

(Quantum Number)

- m
- B. ms
- D.

List II

(Information provided)

- Shape of orbital
- Size of orbital II.
- Orientation of orbital
- IV. Orientation of spin of electron

Change the garrent angular from the entires sives help		
Choose the correct answer from the options given below)W	16

(1) A-III, B-IV, C-I, D-II

(2) A-III, B-IV, C-II, D-I

(3) A-II, B-I, C-IV, D-III

(4) A-I, B-III, C-II, D-IV

Answer (1)

- Sol. Magnetic quantum number m_l informs about orientation of orbital.
 - Spin quantum number ms informs about orientation of spin of electron.
 - · Azimuthal quantum number (I) informs about shape of orbital
 - · Principal quantum number (n) informs about size of orbital
- 78. 'Spin only' magnetic moment is same for which of the following ions?

A. Ti³⁺

B. Cr²⁺

C. Mn²⁺

D. Fe²⁺

E. Sc³⁺

Choose the most appropriate answer from the options given below.

(1) A and E only

(2) B and C only

(3) A and D only

(4) B and D only

Answer (4)

Sol.

ectrons Configuration
3 <i>d</i> 1
3 <i>d</i> ⁴
3 <i>d</i> ⁵
3 <i>d</i> ⁶
3 <i>a</i> °
3

Spin only magnetic moment is given by $\sqrt{n(n+2)}BM$

- :. Cr2+ and Fe2+ will have same spin only magnetic moment.
- 79. The reagents with which glucose does not react to give the corresponding tests/products are
 - A. Tollen's reagent
 - B. Schiff's reagent
 - C. HCN
 - D. NH₂OH
 - E. NaHSO₃

Choose the correct options from the given below:

(1) A and D

(2) B and E

(3) E and D

(4) B and C

Answer (2)

Sol. Despite having the aldehyde group glucose does not give Schiff's test and it does not form the hydrogen sulphite addition product with NaHSO₃.

80. Match List I with List II.

List I

(Reaction)

List II

(Reagents/Condition)

A.
$$\longrightarrow$$
 2 \longrightarrow 0

$$\mathsf{B}.\quad \bigcirc \to \bigcirc \ \ \bigcirc$$

c.
$$\bigcirc$$
OH \rightarrow \bigcirc O

$$D. \quad \bigcap^{\mathsf{CH_2CH_3}} \to \bigcap^{\mathsf{COOK}}$$

(ii) Zn-H₂O

Choose the correct answer from the options given below:

- (1) A-III, B-I, C-II, D-IV
- (2) A-IV, B-I, C-II, D-III
- (3) A-I, B-IV, C-II, D-III
- (4) A-IV, B-I, C-III, D-II

Answer (2)

Sol. (A)
$$(i) O_3 \longrightarrow 2 \longrightarrow 0$$

It is reductive ozonolysis

It is Friedel-Crafts acylation reaction.

(c)
$$\bigcap_{OH} C_{CO_3} \longrightarrow \bigcap_{OH} C_{CO_3}$$

Secondary alcohols are oxidised to ketones by CrO₃

(D)
$$CH_2CH_3 \xrightarrow{KMnO_4} COOK$$

N, O, F, C, Si

Choose the correct answer from the options given below:

- (1) Si < C < O < N < F
- (2) O < F < N < C < Si
- (3) F < O < N < C < Si
- (4) Si < C < N < O < F

Answer (4)

Sol. Electronegativity increases across the period on moving left to right. It decreases on moving down the group.

List II

(Number and types of

two (C - C) π bonds and one (C - C) σ bond

The correct option is Si < C < N < O < F

82. Match List I with List II.

List I	
(Molecule)	

- bond/s between two carbon atoms) ethane one σ -bond and two π -bonds
- A.
- B. ethene two π -bonds C. carbon molecule, C2 one σ-bond
- D. ethyne one σ -bond and one π -bond

Choose the correct answer from the options given below:

- (1) A-IV, B-III, C-II, D-I (2) A-III, B-IV, C-II, D-I
- (3) A-III, B-IV, C-I, D-II (4) A-I, B-IV, C-II, D-III

Answer (2)

Sol. (A) Ethane
$$H = C - C = H$$
 one $(C - C) \sigma$ bond one $(C - C) \pi$ bond one $(C - C) \pi$ bond $(C - C) \pi$ bond $(C - C) \pi$ bonds

Arrange the following elements in increasing order of first ionization enthalpy:

Li, Be, B, C, N

Choose the correct answer from the options given below:

(1) Li < B < Be < C < N

(D) Ethyne $H - C \equiv C - H$

- (2) Li < Be < C < B < N
- (3) Li < Be < N < B < C
- (4) Li < Be < B < C < N

Answer (1)

Sol. Increasing order of first ionization enthalpy is Li < B < Be < C < N

Element	First ionization enthalpy (Δ _i H/kJ mol ⁻¹)
Li	520
Ве	899
В	801
С	1086
N	1402

84. Which one of the following alcohols reacts instantaneously with Lucas reagent?

Answer (3)

Sol. Tertiary alcohols react instantaneously with Lucas reagent and gives immediate turbidity.

In case of tertiary alcohols, they form halides easily with Lucas reagent (conc. HCl and ZnCl₂)

- 85. Activation energy of any chemical reaction can be calculated if one knows the value of
 - (1) probability of collision
 - (2) orientation of reactant molecules during collision
 - (3) rate constant at two different temperatures
 - (4) rate constant at standard temperature

Answer (3)

Sol. To calculate value of Ea

Equation used is

$$\log\left(\frac{k_{2}}{k_{1}}\right) = \frac{E_{a}}{2.303R} \left(\frac{1}{T_{1}} - \frac{1}{T_{2}}\right)$$

Hence E_a can be calculated if value of rate constant k is known at two different temperatures T_1 and T_2 .

SECTION-B

- 86. Identify the correct answer.
 - (1) BF₃ has non-zero dipole moment
 - (2) Dipole moment of NF3 is greater than that of NH3
 - (3) Three canonical forms can be drawn for CO_3^{2-} ion
 - (4) Three resonance structures can be drawn for ozone

Answer (3)

Sol. (1) BF₃ i.e.,
$$\overset{\delta^- \delta^+}{F-B} \overset{\delta^-}{F}$$
; Dipole moment = 0

(3 canonical forms)

- (4) In ozone; there are two resonating structures.
- 87. The pair of lanthanoid ions which are diamagnetic is
 - (1) Ce3+ and Eu2+
 - (2) Gd3+ and Eu3+
 - (3) Pm3+ and Sm3+
 - (4) Ce4+ and Yb2+

Answer (4)

Sol. Magnetic moment $\mu = \sqrt{n(n+2)}$

 $n \rightarrow number of unpaired electron$

$$\mu = \sqrt{63}$$
 P

Paramagnetic

$$Eu^{3+} \Rightarrow (Xe) 4f^6 \qquad \boxed{1 \ 1 \ 1 \ 1}$$

$$\mu = \sqrt{48}$$

Paramagnetic

$$Pm^{3+} \Rightarrow (Xe) 4f^4 \qquad \boxed{1 | 1 | 1 | 1}$$

$$\mu = \sqrt{24}$$

Paramagnetic

$$Sm^{3+} \Rightarrow (Xe) 4f^5$$

1 1 1 1 1

$$\mu = \sqrt{35}$$

Paramagnetic

Hence Ce4+ and Yb2+ are only diamagnetic.

88. The rate of a reaction quadruples when temperature changes from 27°C to 57°C. Calculate the energy of activation.

Given R = 8.314 J K⁻¹ mol⁻¹, log4 = 0.6021

(1) 380.4 kJ/mol

(2) 3.80 kJ/mol

(3) 3804 kJ/mol

(4) 38.04 kJ/mol

Answer (4)

Sol.
$$\log \left(\frac{k_2}{k_1}\right) = \frac{E_a}{2.303R} \left(\frac{1}{T_1} - \frac{1}{T_2}\right)$$

$$\log\left(\frac{4}{1}\right) = \frac{E_a}{2.303R} \left(\frac{1}{300} - \frac{1}{330}\right)$$

$$E_{a} = \frac{(\log(4)) \times 2.303 \times 8.314 \times 300 \times 330}{30}$$

89. For the given reaction:

$$\begin{array}{c|c}
C = CH & \xrightarrow{KMnO_4/H^+} & \text{`p'} \\
 & \text{(major product)}
\end{array}$$

'P' is

Answer (1)

Sol.
$$\bigcirc$$
 C = C $\stackrel{\text{H}}{\longrightarrow}$ $\stackrel{\text{KMnO}_4/\text{H}^+}{\longrightarrow}$ 2 \bigcirc COOH (Major product)

90. The work done during reversible isothermal expansion of one mole of hydrogen gas at 25°C from pressure of 20 atmosphere to 10 atmosphere is

(Given R = 2.0 cal K-1 mol-1)

(1) -413.14 calories

(2) 413.14 calories

(3) 100 calories

(4) 0 calorie

Answer (1)

Sol. W_{rev, iso} =
$$-2.303$$
 nRT log $\frac{P_i}{P_f}$

$$= -2.303 \times 1 \times 2 \times 298 \times \log 2$$

$$= -2.303 \times 1 \times 2 \times 298 \times 0.3$$

= -413.14 calories

91. The products A and B obtained in the following reactions, respectively, are

(1) POCl₃ and H₃PO₄

(2) H₃PO₄ and POCl₃

(3) H₃PO₃ and POCl₃

(4) POCl₃ and H₃PO₃

Answer (3)

Sol. These reactions are preparation of haloalkanes from alcohols.

$$3ROH + PCI_3 \longrightarrow 3RCI + H_3PO_3$$
(A)

$$\mathsf{ROH} + \mathsf{PCl}_5 \longrightarrow \mathsf{RCI} + \mathsf{HCI} + \mathsf{POCl}_3$$

$$^{\mathsf{(B)}}$$

A and B are H₃PO₃ and POCl₃ respectively.

- 92. Given below are certain cations. Using inorganic qualitative analysis, arrange them in increasing group number from 0 to VI.
 - A. Al3+

B. Cu²⁺

C. Ba2+

D. Co²⁺

F Ma²⁺

Choose the correct answer from the options given below.

(1) B, C, A, D, E

(2) E, C, D, B, A

(3) E, A, B, C, D

(4) B, A, D, C, E

Answer (4)

Sol.

Group	Cations
Group-II	Cu ²⁺
Group-III	Al ³⁺
Group-IV	Co ²⁺
Group-V	Ba ²⁺
Group-VI	Mg ²⁺

The correct order of group number of ions is
$$Cu^{2+} < Al^{3+} < Co^{2+} < Ba^{2+} < Mg^{2+} < (E)$$

- .. The correct order is B, A, D, C, E
- 93. The plot of osmotic pressure (Π) vs concentration (mol L⁻¹) for a solution gives a straight line with slope 25.73 L bar mol⁻¹. The temperature at which the osmotic pressure measurement is done is

(Use R = 0.083 L bar mol-1 K-1)

(1) 310°C

(2) 25.73°C

(3) 12.05°C

(4) 37°C

Answer (4)

Sol. $\Pi = CRT$

Slope = RT

25.73 = 0.083 × T

$$T = \frac{25.73}{0.083} = 309.47 \approx 310 \text{ K}$$

:. Temperature in °C = 310 - 273

= 37°C

94. A compound X contains 32% of A, 20% of B and remaining percentage of C. Then, the empirical formula of X is:

(Given atomic masses of A = 64; B = 40; C = 32 u)

(1) ABC₃

(2) AB₂C₂

(3) ABC₄

(4) A₂BC₂

Answer (1)

Sol.

Element	Mass percentage %	No. of moles	No. of moles/ Smallest number	Simplest whole number
Α	32%	$\frac{32}{64} = \frac{1}{2}$	$\frac{1}{2} \times 2$	= 1
В	20%	$\frac{20}{40} = \frac{1}{2}$	$\frac{1}{2} \times 2$	= 1
С	48%	$\frac{48}{32}=\frac{3}{2}$	$\frac{3}{2}$ ×2	= 3

So, empirical formula of $X = \begin{pmatrix} A & : & B & : & C \\ 1 & : & 1 & : & 3 \end{pmatrix}$

.. The correct empirical formula of compound X is ABC3

95. Major products A and B formed in the following reaction sequence, are

$$\begin{array}{c|c} OH \\ H_3C & & \\ \hline \\ PBr_3 \\ (major) & \xrightarrow{Alc.\ KOH} \\ \hline \\ A \\ (major) & \\ \end{array} \begin{array}{c} B \\ (major) \\ \end{array}$$

(3)
$$A = \begin{bmatrix} OH \\ Br \\ B = \end{bmatrix}$$
 $B = \begin{bmatrix} O \\ B = \end{bmatrix}$

(2)
$$A =$$

OH

Br

 H_3C
 H_3C
 $B =$

$$H_3C$$

$$H_3C$$

$$H_3C$$

$$B =$$

Answer (4)

- 96. During the preparation of Mohr's salt solution (Ferrous ammonium sulphate), which of the following acid is added to prevent hydrolysis of Fe²⁺ ion?
 - (1) concentrated sulphuric acid
- (2) dilute nitric acid

(3) dilute sulphuric acid

(4) dilute hydrochloric acid

Answer (3)

- **Sol.** During the preparation of Mohr's salt, dilute sulphuric acid is added to prevent the hydrolysis of Fe²⁺ ion.
- 97. Consider the following reaction in a sealed vessel at equilibrium with concentrations of

$$N_2 = 3.0 \times 10^{-3} \text{ M}, O_2 = 4.2 \times 10^{-3} \text{ M} \text{ and NO} = 2.8 \times 10^{-3} \text{ M}.$$

$$2NO_{(g)} \rightleftharpoons N_{2(g)} + O_{2(g)}$$

If 0.1 mol L^{-1} of $NO_{(g)}$ is taken in a closed vessel, what will be degree of dissociation (α) of $NO_{(g)}$ at equilibrium?

(1) 0.0889

(2) 0.8889

(3) 0.717

(4) 0.00889

Answer (3)

Sol.
$$2NO_{(g)} \rightleftharpoons N_{2(g)} + O_{2(g)}$$

$$K_{o} = \frac{[N_{2}][O_{2}]}{[NO]^{2}}$$

$$= \frac{3 \times 10^{-3} \times 4.2 \times 10^{-3}}{2.8 \times 10^{-3} \times 2.8 \times 10^{-3}}$$

$$= 1.607$$

$$2\mathsf{NO}_{(g)} \ \ensuremath{\rightleftharpoons}\ \ \mathsf{N}_{2(g)} \ \ + \ \ \mathsf{O}_{2(g)}$$

$$0.1 - 0.1\alpha$$
 0.05α 0.05α

$$\boldsymbol{K}_{c} = \frac{0.05\alpha \times 0.05\alpha}{\left(0.1 - 0.1\alpha\right)^{2}}$$

$$\mathsf{K}_{c} = \frac{0.05\alpha \times 0.05\alpha}{0.01(1-\alpha)^{2}}$$

$$1.607 = \frac{(0.05)^2 \alpha^2}{0.01(1-\alpha)^2}$$

$$\frac{\alpha^2}{(1-\alpha)^2} = \frac{1.607 \times (0.1)^2}{(0.05)^2}$$

$$\frac{\alpha}{1-\alpha} = \frac{1.27 \times 0.1}{0.05}$$

$$\frac{\alpha}{1-\alpha}=2.54$$

$$\alpha = 2.54 - 2.54\alpha$$

$$3.54\alpha = 2.54$$

$$\alpha = \frac{2.54}{3.54} = 0.717$$

98. Identify the major product C formed in the following reaction sequence:

$$\operatorname{CH_3} - \operatorname{CH_2} - \operatorname{CH_2} - \operatorname{I} \xrightarrow{\quad \operatorname{NaCN} \quad} \operatorname{A}$$

$$\xrightarrow{\text{OH}^-} \text{Partial hydrolysis} \rightarrow \text{B} \xrightarrow{\text{NaOH}} \text{Br}_2 \xrightarrow{\text{(major)}}$$

- (1) butylamine
- (2) butanamide
- (3) α-bromobutanoic acid
- (4) propylamine

Answer (4)

- Step-I is S_N reaction with [☉]CN nucleophile.
- Step-II will give amide.
- Step-III is Hoffmann bromamide degradation reaction.
- 99. Mass in grams of copper deposited by passing 9.6487 A current through a voltmeter containing copper sulphate solution for 100 seconds is (Given : Molar mass of Cu : 63 g mol⁻¹, 1 F = 96487 C)

Answer (1)

Sol. Cu^{2+} (aq) + $2e^- \rightarrow Cu(s)$

Mass of Cu deposited (w) =
$$\frac{M \times i \times t}{nF}$$

= $\frac{63 \times 9.6487 \times 100}{2 \times 96487}$
= 0.315 g

100. Given below are two statements:

Statement I: [Co(NH₃)₆]³⁺ is a homoleptic complex whereas [Co(NH₃)₄Cl₂]⁺ is a heteroleptic complex.

Statement II: Complex $[Co(NH_3)_6]^{3+}$ has only one kind of ligands but $[Co(NH_3)_4Cl_2]^+$ has more than one kind of ligands.

In the light of the above statements, choose the correct answer from the options given below.

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (4)

Sol. [Co(NH₃)₆]³⁺ is a homoleptic complex as only one type of ligands (NH₃) is coordinated with Co³⁺ ion. While [Co(NH₃)₄Cl₂]⁺ is a heteroleptic complex in which Co³⁺ ion is ligated with more than one type of ligands, *i.e.*, NH₃ and Cl⁻.

BOTANY

SECTION-A

- 101. Lecithin, a small molecular weight organic compound found in living tissues, is an example of:
 - (1) Phospholipids
 - (2) Glycerides
 - (3) Carbohydrates
 - (4) Amino acids

Answer (1)

Sol. The correct answer is option (1).

Some lipids have phosphorous and a phosphorylated organic compound in them. These are phospholipids. They are found in cell membrane. Lecithin is one example.

Option (2) is incorrect as glycerides are another group of lipids in which both glycerol and fatty acids are present.

Option (3) and (4) are incorrect as amino acids and carbohydrates are separate groups of biomolecules.

- 102. These are regarded as major causes of biodiversity loss:
 - A. Over exploitation
 - B. Co-extinction
 - C. Mutation
 - D. Habitat loss and fragmentation
 - E. Migration

Choose the correct option:

- (1) A, B, C and D only
- (2) A, B and E only
- (3) A, B and D only
- (4) A, C and D only

Answer (3)

Sol. Major causes of biodiversity losses are

- (1) Habitat loss and fragmentation
- (2) Over-exploitation
- (3) Alien species invasions
- (4) Co-extinctions

Hence correct option is A, B and D only.

- 103. Which one of the following is not a criterion for classification of fungi?
 - (1) Mode of nutrition

(2) Mode of spore formation

(3) Fruiting body

(4) Morphology of mycelium

Answer (1)

- **Sol.** The morphology of the mycelium, mode of spore formation and fruiting bodies form the basis for the division of the kingdom fungi into various classes.
- 104. A pink flowered Snapdragon plant was crossed with a red flowered Snapdragon plant. What type of phenotype/s is/are expected in the progeny?
 - (1) Red flowered as well as pink flowered plants
 - (2) Only pink flowered plants
 - (3) Red, Pink as well as white flowered plants
 - (4) Only red flowered plants

Answer (1)

Sol. Pink colour flower in snapdragon have genotype Rr

Red flowered snapdragon have genotype RR when they both are crossed

Ş	R	R
R	RR	RR
r	Rr	Rr

Phenotype

Red: Pink: White

2 2 0

So the progeny that we get are red and pink flowered plants only

- 105. Which one of the following can be explained on the basis of Mendel's Law of Dominance?
 - A. Out of one pair of factors one is dominant and the other is recessive.
 - B. Alleles do not show any expression and both the characters appear as such in F₂ generation.
 - C. Factors occur in pairs in normal diploid plants.
 - D. The discrete unit controlling a particular character is called factor.
 - E. The expression of only one of the parental characters is found in a monohybrid cross.

Choose the correct answer from the options given below:

(1) A, C, D and E only

(2) B, C and D only

(3) A, B, C, D and E

(4) A, B and C only

Answer (1)

Sol. According to Law of Dominance

- (1) Characters are controlled by discrete units called factors
- (2) Factors occur in pairs
- (3) In a dissimilar pair of factors one member of the pair dominates (dominant) the other recessive

The law of dominance is used to explain the expression of only one of the parental characters in a monohybrid cross.

Law of segregation is based on the fact that the alleles do not show any expression and both the characters are recovered as such in F_2 generation

- 106. Tropical regions show greatest level of species richness because
 - A. Tropical latitudes have remained relatively undisturbed for millions of years, hence more time was available for species diversification.
 - B. Tropical environments are more seasonal.
 - C. More solar energy is available in tropics.
 - D. Constant environments promote niche specialization.
 - E. Tropical environments are constant and predictable.

Choose the correct answer from the options given below.

- (1) A and B only
- (2) A, B and E only
- (3) A, B and D only
- (4) A, C, D and E only

Answer (4)

Sol. Only statement B is incorrect because tropical environments unlike temperate ones, are less seasonal, relatively more constant and predictable.

Thus statements A, C, D and E are correct.

107. In the given figure, which component has thin outer walls and highly thickened inner walls?

- (1) D
- (3) B

- (2) A
- (4) C

Answer (4)

Sol. Guard cells of stomata have thin outer wall and highly thickened inner walls.

- 108. The cofactor of the enzyme carboxypeptidase is:
 - (1) Niacin
 - (2) Flavin
 - (3) Haem
 - (4) Zinc

Answer (4)

Sol. The correct answer is option (4) as the cofactor of the enzyme carboxypeptidase is zinc.

Niacin is associated with coenzyme NAD and NADP.

Option (3) is incorrect as haem is the prosthetic group in peroxidase and catalase.

109. Given below are two statements:

Statement I: Chromosomes become gradually visible under light microscope during leptotene stage.

Statement II: The beginning of diplotene stage is recognized by dissolution of synaptonemal complex.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (4)

- Sol. During leptotene stage the chromosomes become gradually visible under the light microscope.
 - The beginning of diplotene is recognised by the dissolution of the synaptonemal complex and the tendency of the recombined homologous chromosomes of the bivalents to separate from each other except at the site of crossover.

Thus both statement I and II are correct.

- 110. What is the fate of a piece of DNA carrying only gene of interest which is transferred into an alien organism?
 - A. The piece of DNA would be able to multiply itself independently in the progeny cells of the organism.
 - B. It may get integrated into the genome of the recipient.
 - C. It may multiply and be inherited along with the host DNA.
 - D. The alien piece of DNA is not an integral part of chromosome.
 - E. It shows ability to replicate.

Choose the correct answer from the options given below:

- (1) D and E only
- (2) B and C only
- (3) A and E only
- (4) A and B only

Answer (2)

Sol. Correct answer is option (2) because

The fate of a piece of DNA carrying only gene of interest which is transferred into an alien organism are:

- (B) It may get integrated into the genome of the recipient
- (C) It may multiply and be inherited along with the host DNA
- ⇒ This piece of DNA would not be able to multiply itself in the progeny cells of the organism but when gets integrated into the genome of the recipient, it may multiply and be inherited along with the host DNA.

111. Identify the type of flowers based on the position of calyx, corolla and androecium with respect to the ovary from the given figures (a) and (b)

- (1) (a) Hypogynous; (b) Epigynous
- (2) (a) Perigynous; (b) Epigynous
- (3) (a) Perigynous; (b) Perigynous
- (4) (a) Epigynous; (b) Hypogynous

Answer (3)

Sol. If gynoecium is situated in the centre and other parts of the flower are located on the rim of the thalamus almost at the same level, it is called perigynous.

Both diagram shows perigynous condition.

112. Match List I with List II

List I

- A. Two or more alternative forms of a gene
- Back cross
- B. Cross of F₁ progeny with homozygous
- II. Ploidy

- recessive parent
- C. Cross of F₁ progeny with any of the parents
- III. Allele
- Number of chromosome sets in plant
- IV. Test cross

Choose the correct answer from the options given below:

- (1) A-II, B-I, C-III, D-IV
- (2) A-III, B-IV, C-I, D-II
- (3) A-IV, B-III, C-II, D-I
- (4) A-I, B-II, C-III, D-IV

Answer (2)

- Sol. A. Two or more alternative forms of gene are called alleles.
 - B. Cross of F₁ progeny with homozygous recessive parent is a test cross.
 - C. Cross of F_1 progeny with any of the parents is a back cross.
 - D. Number of chromosome sets in plant is called ploidy.

113. Formation of interfascicular cambium from fully developed parenchyma cells is an example for (1) Redifferentiation (2) Dedifferentiation (3) Maturation (4) Differentiation Answer (2) Sol. The phenomenon of formation of interfascicular cambium from fully differentiated parenchyma cells called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease — Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP NADPH					
(2) Dedifferentiation (3) Maturation (4) Differentiation Answer (2) Sol. The phenomenon of formation of interfascicular cambium from fully differentiated parenchyma cells called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotide sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP	113.	For	mation of interfascicular cambium from fully deve	loped	parenchyma cells is an example for
(3) Maturation (4) Differentiation Answer (2) Sol. The phenomenon of formation of interfascicular cambium from fully differentiated parenchyma cells called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotide sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(1)	Redifferentiation		
(4) Differentiation Answer (2) Sol. The phenomenon of formation of interfascicular cambium from fully differentiated parenchyma cells called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point to recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only 3) D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CCO ₂ ATP		(2)	Dedifferentiation		
Answer (2) Sol. The phenomenon of formation of interfascicular cambium from fully differentiated parenchyma cells called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotic sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(3)	Maturation		
Sol. The phenomenon of formation of interfascicular cambium from fully differentiated parenchyma cells called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(4)	Differentiation		
called dedifferentiation. 114. Which of the following is an example of actinomorphic flower? (1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotide sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Ans	swer (2)		
(1) Cassia (2) Pisum (3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Sol		cam	bium from fully differentiated parenchyma cells i
(3) Sesbania (4) Datura Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. 115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP	114.	Wh	ich of the following is an example of actinomorph	ic flow	ver?
Answer (4) Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease — Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(1)	Cassia	(2)	Pisum
Sol. Datura shows actinomorphic flower. In Cassia, Pisum and Sesbania, zygomorphic flowers are seen. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotic sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(3)	Sesbania	(4)	Datura
115. Hind II always cuts DNA molecules at a particular point called recognition sequence and it consists of: (1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Ans	swer (4)		
(1) 6 bp (2) 4 bp (3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Sol	. Datura shows actinomorphic flower. In Cassia,	Pisun	n and Sesbania, zygomorphic flowers are seen.
(3) 10 bp (4) 8 bp Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP	115.	Hin	d II always cuts DNA molecules at a particular po	int ca	lled recognition sequence and it consists of:
Answer (1) Sol. The correct answer is option (1). The first restriction endonuclease — Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(1)	6 bp	(2)	4 bp
Sol. The correct answer is option (1). The first restriction endonuclease – Hind II, whose functioning depends on a specific DNA nucleotid sequence was isolated. It was found that Hind II always cut DNA molecules at a particular point by recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(3)	10 bp	(4)	8 bp
The first restriction endonuclease – <i>Hind</i> II, whose functioning depends on a specific DNA nucleotic sequence was isolated. It was found that <i>Hind</i> II always cut DNA molecules at a particular point by recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Ans	swer (1)		
sequence was isolated. It was found that <i>Hind</i> II always cut DNA molecules at a particular point be recognising sequence of six base pairs. Option (2), (3) and (4) are incorrect because they have either more than 6 or less than 6 bp. 116. Which of the following are required for the dark reaction of photosynthesis? A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Sol	The correct answer is option (1).		
A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (3) D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP			sequence was isolated. It was found that Hind		
A. Light B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP			Option (2), (3) and (4) are incorrect because the	ey hav	ve either more than 6 or less than 6 bp.
B. Chlorophyll C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP	116.	Wh	ich of the following are required for the dark react	ion of	f photosynthesis?
C. CO ₂ D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		A.	Light		
D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		В.	Chlorophyll		
D. ATP E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		C.	CO ₂		
E. NADPH Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		D.	ATP		
Choose the correct answer from the options given below: (1) B, C and D only (2) C, D and E only (3) D and E only (4) A, B and C only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP					
(3) D and E only Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP				elow:	
Answer (2) Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(1)	B, C and D only	(2)	C, D and E only
Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		(3)	D and E only	(4)	A, B and C only
Sol. For dark reaction of photosynthesis there are the requirement of CO ₂ ATP		Ans	swer (2)		
ATP			31.5344.000 (e req	uirement of
			ATP		

117. Given below are two statements:

Statement I: Bt toxins are insect group specific and coded by a gene cry IAc.

Statement II: Bt toxin exists as inactive protoxin in *B. thuringiensis*. However, after ingestion by the insect the inactive protoxin gets converted into active form due to acidic pH of the insect gut.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (2)

- **Sol.** The correct answer is option (2) as specific Bt toxin genes were isolated from *Bacillus thuringiensis* and incorporated into the several crop plants such as cotton. The choice of genes depends upon the crop and the targeted pest as most Bt toxins are insect-group specific. The toxin is coded by a gene named *cry*. There are a number of them, for example, the proteins encoded by the genes *cry* IAc and *cry* IIAb control the cotton bollworms, that of *cry* IAb controls com borer.
- 118. The equation of Verhulst-Pearl logistic growth is $\frac{dN}{dt} = rN \left[\frac{K N}{K} \right]$.

From this equation, K indicates:

- (1) Biotic potential
- (2) Carrying capacity
- (3) Population density
- (4) Intrinsic rate of natural increase

Answer (2)

Sol. In the equation $\frac{dN}{dt} = rN\left(\frac{K-N}{K}\right)$, K represents carrying capacity.

- 119. The capacity to generate a whole plant from any cell of the plant is called:
 - (1) Micropropagation

(2) Differentiation

(3) Somatic hybridization

(4) Totipotency

Answer (4)

Sol. Totipotency is defined as the capacity to generate a whole plant from any cell of the plant.

- 120. The type of conservation in which the threatened species are taken out from their natural habitat and placed in special setting where they can be protected and given special care is called
 - (1) Biodiversity conservation

(2) Semi-conservative method

(3) Sustainable development

(4) in-situ conservation

Answer (1)

Sol. The type of conservation in which threatened species are taken out from their natural habitat and placed in special setting where they can be protected and given special care is called *ex-situ* conservation which is a type of biodiversity conservation.

121. The lactose present in the growth medium of bacteria is transported to the cell by the action of

(1) Acetylase

(2) Permease

(3) Polymerase

(4) Beta-galactosidase

Answer (2)

Sol. The y gene lac operon codes for permease enzyme, which increase the permeability of cell to β -galactosides.

So, the lactose present in the growth medium of bacteria is transported into the cell by the action of permease.

122. Spindle fibers attach to kinetochores of chromosomes during

(1) Metaphase

(2) Anaphase

(3) Telophase

(4) Prophase

Answer (1)

Sol. Spindle fibers attach to kinetochores of chromosome in metaphase stage.

123. Identify the part of the seed from the given figure which is destined to form root when the seed germinates.

(1) B

(2) C

(3) D

(4) A

Answer (2)

Sol. Radicle is destined to form root.

In the given diagram 'C' represent radicle

- 124. A transcription unit in DNA is defined primarily by the three regions in DNA and these are with respect to upstream and down stream end;
 - (1) Structural gene, Transposons, Operator gene
 - (2) Inducer, Repressor, Structural gene
 - (3) Promotor, Structural gene, Terminator
 - (4) Repressor, Operator gene, Structural gene

Answer (3)

Sol. A transcription unit of DNA is defined primarily by the three regions in the DNA:

- (i) A promoter
- (ii) The structural gene
- (iii) A terminator

The promoter is said to be located towards 5'-end (upstream) of the structural gene (the reference is made with respect to the polarity of coding strand)

The terminator is located towards 3'-end (downstream) of the coding strand.

- 125. How many molecules of ATP and NADPH are required for every molecule of CO₂ fixed in the Calvin cycle?
 - (1) 2 molecules of ATP and 2 molecules of NADPH
 - (2) 3 molecules of ATP and 3 molecules of NADPH
 - (3) 3 molecules of ATP and 2 molecules of NADPH
 - (4) 2 molecules of ATP and 3 molecules of NADPH

Answer (3)

Sol. For fixation of 1 molecule of CO2 in Calvin cycle 3 ATP molecules and 2 NADPH molecules are required.

126. Given below are two statements:

Statement I: Parenchyma is living but collenchyma is dead tissue.

Statement II: Gymnosperms lack xylem vessels but presence of xylem vessels is the characteristic of angiosperms.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (3)

Sol. Collenchyma is also living tissue.

Gymnosperm lack xylem vessels but presence of xylem vessels is the characteristic of angiosperm.

- 127. Auxin is used by gardeners to prepare weed-free lawns. But no damage is caused to grass as auxin
 - (1) promotes abscission of mature leaves only.
 - (2) does not affect mature monocotyledonous plants.
 - (3) can help in cell division in grasses, to produce growth.
 - (4) promotes apical dominance.

Answer (2)

- **Sol.** Auxin does not affect mature monocot plants. In monocots, especially grasses show limited translocation and cause rapid degradation of external auxin.
- 128. In a plant, black seed color (BB/Bb) is dominant over white seed color (bb). In order to find out the genotype of the black seed plant, with which of the following genotype will you cross it?

(1) bb

(2) Bb

(3) BB/Bb

(4) BB

Answer (1)

- **Sol.** To determine the genotype of a black seed colour at F₂, the black seed from F₂ is crossed with the white seed colour. This is called a test cross.
 - :. To determine the genotype of (BB/Bb) black seed we need to cross them with white seed i.e. bb.

- 129. Inhibition of Succinic dehydrogenase enzyme by malonate is a classical example of:
 - (1) Feedback inhibition
 - (2) Competitive inhibition
 - (3) Enzyme activation
 - (4) Cofactor inhibition

Answer (2)

Sol. Correct answer is option (2) because malonate shows close structural similarity with the substrate and it competes with the substrate for the substrate binding site of the enzyme succinic dehydrogenase. Option (1), (3) and (4) are incorrect as enzyme activation, co-factor inhibition are not showing structural similarity with substrate.

130. Match List I with List II

	List I		List II
A.	Clostridium butylicum	I.	Ethanol
В.	Saccharomyces cerevisiae	II.	Streptokinase
C.	Trichoderma polysporum	III.	Butyric acid
D.	Streptococcus sp.	IV.	Cyclosporin-A

Choose the correct answer from the options given below:

- (1) A-II, B-IV, C-III, D-I
- (2) A-III, B-I, C-IV, D-II
- (3) A-IV, B-I, C-III, D-II
- (4) A-III, B-I, C-II, D-IV

Answer (2)

Sol. A. Clostridium butylicum — Butyric acid

B. Saccharomyces cerevisiae — Ethanol

C. Trichoderma polysporum — Cyclosporin-A

D. Streptococcus sp. — Streptokinase

- 131. List of endangered species was released by
 - (1) WWF
 - (2) FOAM
 - (3) IUCN
 - (4) GEAC

Answer (3)

Sol. List of endangered species was released by - IUCN.

	List-I		List-II
A.	Nucleolus	Le	Site of formation of glycolipid
B.	Centriole	II.	Organization like the cartwheel
C.	Leucoplasts	Ш.	Site for active ribosomal RNA synthesis
D.	Golgi apparatus	IV.	For storing nutrients

Choose the correct answer from the options given below:

- (1) A-II, B-III, C-I, D-IV
- (2) A-III, B-IV, C-II, D-I
- (3) A-I, B-II, C-III, D-IV
- (4) A-III, B-II, C-IV, D-I

Answer (4)

- Sol. · Nucleolus is a site for active ribosomal RNA synthesis
 - Both the centrioles in a centrosome lie perpendicular to each other in which each has an organisation like the cartwheel.
 - · Leucoplasts are the colourless plastids of varied shapes and sizes with stored nutrients.
 - · Golgi apparatus is the important site for formation of glycoproteins and glycolipids.

133. Match List I with List II

	List-I		List-II
A.	Rhizopus	Ĭ,	Mushroom
В.	Ustilago	11.	Smut fungus
C.	Puccinia	III.	Bread mould
D.	Agaricus	IV.	Rust fungus

Choose the correct answer from the options given below:

(1) A-I, B-III, C-II, D-IV

(2) A-III, B-II, C-I, D-IV

(3) A-IV, B-III, C-II, D-I

(4) A-III, B-II, C-IV, D-I

Answer (4)

Sol. Rhizopus is a bread mould fungus. Ustilago is a smut fungi. Puccinia is known as rust fungi. Agaricus is commonly called mushroom.

A-III

B-II

C-IV

D-I

- 134. Identify the set of correct statements:
 - A. The flowers of Vallisneria are colourful and produce nectar.
 - B. The flowers of water lily are not pollinated by water.
 - C. In most of water-pollinated species, the pollen grains are protected from wetting.
 - D. Pollen grains of some hydrophytes are long and ribbon like.
 - E. In some hydrophytes, the pollen grains are carried passively inside water.

Choose the correct answer from the options given below.

(1) A, B, C and D only

(2) A, C, D and E only

(3) B, C, D and E only

(4) C, D and E only

Answer (3)

- **Sol.** Flowers of *Vallisneria* are not colourful and do not produce nectar. Waterlily is pollinated by insect or wind. In water-pollinated species, pollen grains are protected from wetting by a mucilaginous covering. In some hydrophytes such as *Vallisneria* pollen grains are carried passively by water current.
- 135. Bulliform cells are responsible for
 - (1) Protecting the plant from salt stress.
 - (2) Increased photosynthesis in monocots.
 - (3) Providing large spaces for storage of sugars.
 - (4) Inward curling of leaves in monocots.

Answer (4)

Sol. In grasses, certain adaxial epidermal cells along the veins modify themselves into large, empty, colourless cells. These are called bulliform cells. When the bulliform cells in the leaves have absorbed water and are turgid, the leaf surface is exposed. When they are flaccid due to water stress, they make the leaves curl inwards to minimise water loss.

SECTION-B

1 :-4 !!

136. Match List I with List II

(Types of Stamens)			(Example)
A.	Monoadelphous	1.	Citrus
В.	Diadelphous	II.	Pea
C.	Polyadelphous	III.	Lily
D.	Epiphyllous	IV.	China-rose

Choose the correct answer from the options given below:

(1) A-IV, B-I, C-II, D-III

(2) A-I, B-II, C-IV, D-III

(3) A-III, B-I, C-IV, D-II

(4) A-IV, B-II, C-I, D-III

Answer (4)

Sol. In China rose monoadelphous androecium is present.

Diadelphous androecium is found in pea plant.

Polyadelphous androecium is found in citrus.

Epiphyllous androecium is found in lily.

- 137. Identify the step in tricarboxylic acid cycle, which does not involve oxidation of substrate.
 - (1) Succinic acid → Malic acid
 - (2) Succinyl-CoA → Succinic acid
 - (3) Isocitrate → α-ketoglutaric acid
 - (4) Malic acid → Oxaloacetic acid

Answer (2)

Sol. Oxidation involves the loss of electrons (often as part of hydrogen) from a molecule, leaving to an increase in its oxidation state. This process is typically associated with the transfer of electrons to an electron acceptor which is reduced in the process.

The conversion of succinyl CoA to succinic acid does not involve oxidation of substrate.

- 138. The DNA present in chloroplast is:
 - (1) Circular, double stranded
 - (2) Linear, single stranded
 - (3) Circular, single stranded
 - (4) Linear, double stranded

Answer (1)

Sol. The DNA present in chloroplast is circular double stranded.

139. Match List I with List II

List I

- A. Frederick Griffith
- B. Francois Jacob & Jacque Monod
- C. Har Gobind Khorana
- D. Meselson & Stahl

List II

- Genetic code
- II. Semi-conservative mode of DNA replication
- III. Transformation
- IV. Lac operon

Choose the correct answer from the options given below:

- (1) A-III, B-IV, C-I, D-II
- (2) A-II, B-III, C-IV, D-I
- (3) A-IV, B-I, C-II, D-III
- (4) A-III, B-II, C-I, D-IV

Answer (1)

Sol. Frederick Griffith series of experiment witness miraculous transformation in the bacteria.

The elucidation of *Lac* operon was a result of a close association between geneticist, Francois Jacob and a biochemist, Jacques Monod.

Meselson and Stahl gave semi-conservative mode of DNA replication.

Har Gobind Khorana developed chemical method to define combination of bases in genetic code.

140. Which of the following are fused in somatic hybridization involving two varieties of plants?

(1) Somatic embryos

(2) Protoplasts

(3) Pollens

(4) Callus

Answer (2)

Sol. Protoplast of two varieties of plants are fused in somatic hybridization.

141. Identify the correct description about the given figure:

- (1) Water pollinated flowers showing stamens with mucilaginous covering.
- (2) Cleistogamous flowers showing autogamy.
- (3) Compact inflorescence showing complete autogamy
- (4) Wind pollinated plant inflorescence showing flowers with well exposed stamens.

Answer (4)

Sol. The given diagram shows a wind pollinated plant showing compact inflorescence and well exposed stamens.

Stamens are exposed so complete autogamy does not occur.

142. Given below are two statements:

Statement I: In C₃ plants, some O₂ binds to RuBisCO, hence CO₂ fixation is decreased.

Statement II: In C₄ plants, mesophyll cells show very little photorespiration while bundle sheath cells do not show photorespiration.

In the light of the above statements, choose the *correct* answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (2)

Sol. In C₃ plant, some O₂ bind to RuBisCO, and hence CO₂ fixation is decreased. Statement II is incorrect, photorespiration does not occur in C₄ plants as they lack RuBisCO in mesophyll. Hence statement I is the only correct option.

List I

- A. Robert May
- B. Alexander von Humboldt
- C. Paul Ehrlich

D. David Tilman

List II

- Species-Area relationship
- II. Long term ecosystem experiment using out door plots
- III. Global species diversity at about 7 million
- IV. Rivet popper hypothesis

Choose the correct answer from the options given below:

- (1) A-III, B-I, C-IV, D-II
- (2) A-I, B-III, C-II, D-IV
- (3) A-III, B-IV, C-II, D-I
- (4) A-II, B-III, C-I, D-IV

Answer (1)

Sol. Robert May places the global species diversity at about 7 million.

Alexander von Humboldt gave species-area relationship.

Paul Ehrlich used an analogy "Rivet popper hypothesis" to explain the role of species in the ecosystem.

David Tilman performed long term ecosystem experiments using out door plots.

- 144. In an ecosystem if the Net Primary Productivity (NPP) of first trophic level is 100x (kcal m⁻²) yr⁻¹, what would be the GPP (Gross Primary Productivity) of the third trophic level of the same ecosystem?
 - (1) $x(kcal m^{-2})yr^{-1}$
 - (2) 10x(kcal m⁻²)yr⁻¹
 - (3) $\frac{100x}{3x}$ (kcal m⁻²) yr⁻¹
 - (4) $\frac{x}{10}$ (kcal m⁻²) yr⁻¹

Answer (2)

- **Sol.** NPP at first trophic level would be the GPP for second trophic level. NPP at second trophic level would be GPP for third trophic level. Therefore, 100x (kcal/m²/yr) would be GPP at second trophic level and $100x \times 10\%$ (kcal/m²/yr) *i.e.*, 10x (kcal/m²/yr) energy would be GPP at third trophic level.
- 145. Which of the following statement is correct regarding the process of replication in E.coli?
 - (1) The DNA dependent RNA polymerase catalyses polymerization in one direction, that is 5' → 3'
 - (2) The DNA dependent DNA polymerase catalyses polymerization in 5' \rightarrow 3' as well as 3' \rightarrow 5' direction
 - (3) The DNA dependent DNA polymerase catalyses polymerization in $5' \rightarrow 3'$ direction
 - (4) The DNA dependent DNA polymerase catalyses polymerization in one direction that is $3' \rightarrow 5'$

Answer (3)

Sol. In Prokaryotes, like *E.coli* during replication, the DNA dependent DNA polymerase catalyse polymerization only in one direction, that is $5' \rightarrow 3'$

	List I		List II
A.	Citric acid cycle	1.	Cytoplasm
В.	Glycolysis	II.	Mitochondrial matrix
C.	Electron transport system	III.	Intermembrane space of mitochondria
D.	Proton gradient	IV.	Inner mitochondrial membrane

Choose the correct answer from the options given below:

(1) A-II, B-I, C-IV, D-III

(2) A-III, B-IV, C-I, D-II

(3) A-IV, B-III, C-II, D-I

(4) A-I, B-II, C-III, D-IV

Answer (1)

Sol. Citric acid cycle occurs in mitochondrial matrix.

Glycolysis occurs in cytosol in most of the organism.

Electron transport system is present in the inner mitochondrial membrane.

Proton gradient is formed across the intermembrane space of mitochondria.

147. Spraying sugarcane crop with which of the following plant growth regulators, increases the length of stem, thus, increasing the yield?

(1) Gibberellin

(2) Cytokinin

(3) Abscisic acid

(4) Auxin

Answer (1)

- **Sol.** Sugarcanes store carbohydrate as sugar in their stems. Spraying sugarcane crop with gibberellins increases the length of the stem, thus increasing the yield.
- 148. Read the following statements and choose the set of correct statements:

In the members of Phaeophyceae,

- A. Asexual reproduction occurs usually by biflagellate zoospores.
- B. Sexual reproduction is by oogamous method only.
- C. Stored food is in the form of carbohydrates which is either mannitol or laminarin.
- D. The major pigments found are chlorophyll a, c and carotenoids and xanthophyll.
- E. Vegetative cells have a cellulosic wall, usually covered on the outside by gelatinous coating of algin.

Choose the correct answer from the options given below:

(1) B, C, D and E only

(2) A, C, D and E only

(3) A, B, C and E only

(4) A, B, C and D only

Answer (2)

Sol. In members of Phaeophyceae sexual reproduction is by oogamous, isogamous or anisogamous methods.

Therefore correct set of statements are A, C, D and E.

List I

A. Rose

B. Pea

C. Cotton

D. Mango

List II

I. Twisted aestivation

II. Perigynous flower

III. Drupe

IV. Marginal placentation

Choose the correct answer from the options given below:

- (1) A-I, B-II, C-III, D-IV
- (2) A-IV, B-III, C-II, D-I
- (3) A-II, B-III, C-IV, D-I
- (4) A-II, B-IV, C-I, D-III

Answer (4)

Sol. Rose have half-inferior ovary, thus it is known as Perigynous flower.

In Pea, the placenta form a ridge along the ventral suture of the ovary and ovules are borne on this ridge forming two rows.

In Cotton, twisted aestivation is present.

In Mango, fruit is drupe.

150. Match List-I with List-II

List-I

A. GLUT-4

B. Insulin

C. TrypsinD. Collagen

List-II

Hormone

. Enzyme

III. Intercellular ground substance

IV. Enables glucose transport into cells

Choose the correct answer from the options given below.

- (1) A-I, B-II, C-III, D-IV
- (2) A-II, B-III, C-IV, D-I
- (3) A-III, B-IV, C-I, D-II
- (4) A-IV, B-I, C-II, D-III

Answer (4)

Sol. Correct answer is option (4)

A. GLUT-4

B. Insulin

C. Trypsin

D. Collagen

IV. Enables glucose transport into cells

. Hormone

II. Enzyme

III. Intercellular ground substance

ZOOLOGY

SECTION-A

151. Match List I with List II:

ì	List I (Sub Phases of Prophase I)		List II (Specific Characters)
A.	Diakinesis	1.	Synaptonemal complex formation
B.	Pachytene	11.	Completion of terminalisation of chiasmata
C.	Zygotene	III.	Chromosomes look like thin threads
D.	Leptotene	IV.	Appearance of recombination nodules

Choose the correct answer from the options given below

(1) A-I, B-II, C-IV, D-III

(2) A-II, B-IV, C-I, D-III

(3) A-IV, B-III, C-II, D-I

(4) A-IV, B-II, C-III, D-I

Answer (2)

- Sol. (A) Diakinesis Completion of terminalisation of chiasmata
 - (B) Pachytene Appearance of recombination nodules
 - (C) Zygotene Synaptonemal complex formation
 - (D) Leptotene Chromosomes look like thin threads

A-II, B-IV, C-I, D-III

- 152. Consider the following statements:
 - A. Annelids are true coelomates
 - B. Poriferans are pseudocoelomates
 - C. Aschelminthes are acoelomates
 - D. Platyhelminthes are pseudocoelomates

Choose the correct answer from the options given below:

(1) A only

(2) Conly

(3) Donly

(4) B only

Answer (1)

- **Sol.** The correct answer is option no. (1), because annelids are true coelomate animals. Options (2), (3) and (4) are incorrect because poriferans are acoelomates, aschelminths are pseudocoelomates and platyhelminthes are acoelomates.
- 153. Match List I with List II:

List I		List II
Pons	I.	Provides additional space for Neurons, regulates posture and balance.
Hypothalamus	II.	Controls respiration and gastric secretions.
Medulla	III.e	Connects different regions of the brain.
Cerebellum	IV.	Neuro secretory cells
	Pons Hypothalamus Medulla	Pons I. Hypothalamus II. Medulla III.

Choose the correct answer from the options given below:

(1) A-III, B-IV, C-II, D-I

(2) A-I, B-III, C-II, D-IV

(3) A-II, B-I, C-III, D-IV

(4) A-II, B-III, C-I, D-IV

Answer (1)

Sol. The correct answer is option (1) as

A.	Pons		Part of hindbrain, it connects different regions of the brain.			
В.	Hypothalamus	-	Also have neuro secretory cells which secrete hormones.			
C.	Medulla oblongata	-	Part of hindbrain which controls respiration and gastric secretions.			
D.	Cerebellum	_	Part of hindbrain with convoluted surface which provides additional space for neurons, also regulates posture and balance.			

- 154. Which of the following factors are favourable for the formation of oxyhaemoglobin in alveoli?
 - (1) High pO2 and Lesser H+ concentration
 - (2) Low pCO2 and High H+ concentration
 - (3) Low pCO2 and High temperature
 - (4) High pO2 and High pCO2

Answer (1)

Sol. The correct answer is option (1) as

Conditions favourable for formation of oxyhaemoglobin in alveoli are high pO₂, less H⁺ concentration low pCO₂ and low temperature.

Option (2), (3) and (4) are not correct as they do not favour the formation of oxyhaemoglobin.

- 155. Following are the stages of cell division:
 - A. Gap 2 phase
 - B. Cytokinesis
 - C. Synthesis phase
 - D. Karyokinesis
 - E. Gap 1 phase

Choose the correct sequence of stages from the options given below:

- (1) E-B-D-A-C
- (2) B-D-E-A-C
- (3) E-C-A-D-B
- (4) C-E-D-A-B

Answer (3)

Sol. The correct sequence of stages of cell division is

$$\begin{array}{c} \text{Gap 1 phase} \rightarrow \text{Synthesis phase} \rightarrow \text{Gap 2 phase} \\ \text{(E)} \qquad \qquad \text{(C)} \qquad \qquad \text{(A)} \end{array}$$

The correct sequence will be \rightarrow E \rightarrow C \rightarrow A \rightarrow D \rightarrow B

156. Three types of muscles are given as a, b and c. Identify the correct matching pair along with their location in human body:

Name of muscle/location

- (1) (a) Skeletal Triceps
 - (b) Smooth Stomach
 - (c) Cardiac Heart
- (2) (a) Skeletal Biceps
 - (b) Involuntary Intestine
 - (c) Smooth Heart
- (3) (a) Involuntary Nose tip
 - (b) Skeletal Bone
 - (c) Cardiac Heart
- (4) (a) Smooth Toes
 - (b) Skeletal Legs
 - (c) Cardiac Heart

Answer (1)

Sol. The correct answer is option (1) as

Figure (a) represents skeletal muscle fibres which are closely attached to skeletal bones. In a typical muscle such as triceps and biceps, striated muscle fibres are bundled together in a parallel fashion.

Figure (b) represents smooth muscle fibres which are present in the wall of internal organs such as the blood vessels, stomach and intestine.

Figure (c) represents cardiac muscle fibres which are exclusively present in the heart.

157. Match List I with List II:

	List I		List II
Α.	Down's syndrome	1.	11th chromosome
В.	α-Thalassemia	11.	'X' chromosome
C.	β-Thalassemia	III.	21st chromosome
D.	Klinefelter's syndrome	IV.	16 th chromosome

Choose the correct answer from the options given below:

(1) A-II, B-III, C-IV, D-I

(2) A-III, B-IV, C-I, D-II

(3) A-IV, B-I, C-II, D-III

(4) A-I, B-II, C-III, D-IV

Answer (2)

- **Sol.** Down's syndrome is due to presence of an additional copy of chromosome number 21. Klinefelter's syndrome is caused due to presence of an additional copy of X-chromosome. α-Thalassemia is controlled by two closely linked genes on chromosome 16 of each parent. β-Thalassemia is controlled by a single gene HBB on chromosome 11 of each parent.
- 158. Which of the following are Autoimmune disorders?

A. Myasthenia gravis

B. Rheumatoid arthritis

C. Gout

D. Muscular dystrophy

E. Systemic Lupus Erythematosus (SLE)

Choose the most appropriate answer from the options given below:

(1) A, B & E only

(2) B, C & E only

(3) C, D & E only

(4) A, B & D only

Answer (1)

Sol. The correct answer is option (1) as Myasthenia gravis, Rheumatoid arthritis and Systemic Lupus Erythematosus (SLE) are autoimmune disorders.

Muscular dystrophy is a genetic disorder which progressively affects the skeletal muscles.

Gout is the inflammation of joints due to deposition of uric acid crystals.

Option (2), (3) and (4) are not the correct answer because all of them are not autoimmune disorders.

159. Given below are two statements : one is labelled as Assertion A and the other is labelled as Reason R :

Assertion A: FSH acts upon ovarian follicles in female and Leydig cells in male.

Reason R : Growing ovarian follicles secrete estrogen in female while interstitial cells secrete androgen in male human being.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both A and R are true but R is NOT the correct explanation of A
- (2) A is true but R is false
- (3) A is false but R is true
- (4) Both A and R are true and R is the correct explanation of A

Answer (3)

Sol. The correct answer is option (3) as FSH is a gonadotropin affects ovarian follicles in females and causes their growth but in males LH affects Leydig cells leading to secretion of androgens.

Growing ovarian follicles secrete estrogen in females while interstitial cells secrete androgen in male human being.

Hence, Assertion is false and Reason is true.

160. Given below are two statements:

Statement I: In the nephron, the descending limb of loop of Henle is impermeable to water and permeable to electrolytes.

Statement II: The proximal convoluted tubule is lined by simple columnar brush border epithelium and increases the surface area for reabsorption.

In the light of the above statements, choose the correct answer from the option given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (1)

Sol. Correct answer is option (1) because

Statement I is false as the descending limb of loop of Henle is permeable to water and almost impermeable to electrolytes.

Statement II is false as proximal convoluted tubule is lined by simple cuboidal brush border epithelium which increases the surface area for reabsorption.

161. Given below are two statements: One is labelled as Assertion A and the other is labelled as Reason R:

Assertion A : Breast-feeding during initial period of infant growth is recommended by doctors for bringing a healthy baby.

Reason R: Colostrum contains several antibodies absolutely essential to develop resistance for the new born baby.

In the light of the above statements, choose the most appropriate answer from the options given below:

- (1) Both A and R are correct but R is NOT the correct explanation of A
- (2) A is correct but R is not correct
- (3) A is not correct but R is correct
- (4) Both A and R are correct and R is the correct explanation of A

Answer (4)

Sol. Correct answer is option (4)

Breast-feeding during initial period of infant growth is recommended by doctors for bringing a healthy baby as colostrum contains several antibodies absolutely essential to develop resistance for the new born baby.

162. Match List I with List II:

	List I		List II
A.	Cocaine	l.	Effective sedative in surgery
B.	Heroin	II.	Cannabis sativa
C.	Morphine	III.	Erythroxylum
D.	Marijuana	IV.	Papaver somniferum
Choo	se the correct ans	wer from	the options given below:

(1) A-I, B-III, C-II, D-IV

- (2) A-II, B-I, C-III, D-IV
- (3) A-III, B-IV, C-I, D-II
- (4) A-IV, B-III, C-I, D-II

Answer (3)

Sol. The correct option is (3) as

- A. Cocaine Obtained from plant Erythroxylum coca, stimulating action on CNS.
- B. Heroin Formed by the acetylation of morphine which is obtained from plant *Papaver somniferum*.
- C. Morphine Obtained from Papaver somniferum, is an effective sedative in surgery.
- D. Marijuana Obtained from *Cannabis* sativa, produces hallucinogenic effect and affects cardiovascular system of the body.

List I

List II

A. Pterophyllum

I. Hag fish

B. Myxine

II. Saw fish

C. Pristis

III. Angel fish

D. Exocoetus

IV. Flying fish

Choose the correct answer from the options given below:

(1) A-III, B-I, C-II, D-IV

(2) A-IV, B-I, C-II, D-III

(3) A-III, B-II, C-I, D-IV

(4) A-II, B-I, C-III, D-IV

Answer (1)

Sol. The correct option is option no. (1) as

Pterophyllum is the scientific name for Angel fish.

Myxine is the scientific name for Hag fish.

Pristis is the scientific name for Saw fish.

Exocoetus is the scientific name for Flying fish.

164. Match List I with List II:

	List I		List II
Α.	Pleurobrachia	I.	Mollusca
B.	Radula	II.	Ctenophora
C.	Stomochord	III.	Osteichthyes
D.	Air bladder	IV.	Hemichordata

Choose the correct answer from the options given below:

(1) A-II, B-I, C-IV, D-III

(2) A-II, B-IV, C-I, D-III

(3) A-IV, B-III, C-II, D-I

(4) A-IV, B-II, C-III, D-I

Answer (1)

Sol. The correct answer is option (1) as

A. Pleurobrachia

is a member of phylum Ctenophora.

B. Radula

is a rasping feeding organ present in phylum Mollusca.

C. Stomochord

Rudimentary structure similar to notochord found in the collar region of

members of phylum Hemichordata.

D. Air bladder

is found in Osteichthyes which provides them buoyancy.

165. In both sexes of cockroach, a pair of jointed filamentous structures called anal cerci are present on

(1) 10th segment

(2) 8th and 9th segment

(3) 11th segment

(4) 5th segment

Answer (1)

Sol. Correct answer is option (1), because in both sexes of cockroach, 10th segment bears a pair of jointed filamentous structures called anal cerci.

Options (2), (3) and (4) are incorrect because 5th, 8th and 9th segments do not bear such structures. In adult cockroaches only 10th segments are present in abdomen. 11th abdominal segment is absent.

- 166. The flippers of the Penguins and Dolphins are the example of the
 - (1) Natural selection

(2) Convergent evolution

(3) Divergent evolution

(4) Adaptive radiation

Answer (2)

- Sol. The correct answer is option (2), because the flippers of the Penguins and Dolphins perform similar function but they are not anatomically similar structures. This is example of analogous structures.
 - Option (1) is incorrect as natural selection is a key mechanism of evolution.
 - Option (3) is incorrect as divergent evolution results in the formation of homologous structures.
 - Option (4) is incorrect as adaptive radiation is the process of evolution of different species in a given geographical area starting from a point and literally radiating to the other areas of geography.
- 167. Which of the following statements is incorrect?
 - (1) Most commonly used bio-reactors are of stirring type
 - (2) Bio-reactors are used to produce small scale bacterial cultures
 - (3) Bio-reactors have an agitator system, an oxygen delivery system and foam control system
 - (4) A bio-reactor provides optimal growth conditions for achieving the desired product

Answer (2)

Sol. Correct answer is option (2)

The statement (2) is incorrect because bioreactors are used for processing of large volumes (100 -1000 litres) of culture.

Small volume cultures cannot yield appreciable quantities of products. To produce in large quantities the development of bioreactors is required.

- 168. Which one is the correct product of DNA dependent RNA polymerase to the given template?
 - 3'TACATGGCAAATATCCATTCA5'
 - (1) 5'AUGUAAAGUUUAUAGGUAAGU3'
 - (2) 5'AUGUACCGUUUAUAGGGAAGU3'
 - (3) 5'ATGTACCGTTTATAGGTAAGT3'
 - (4) 5'AUGUACCGUUUAUAGGUAAGU3'

Answer (4)

Sol. Template DNA is:

3'TACATGGCAAATATCCATTCA5'

5'AUGUACCGUUUAUAGGUAAGU3' m-RNA

169. Match List I with List II:

	List I		List II		
A.	Fibrous joints	1.	Adjacent vertebrae, limited movement		
B.	Cartilaginous joints	II.	Humerus and Pectoral girdle, rotational movement		
C.	Hinge joints	Ш.	Skull, don't allow any movement		
D.	Ball and socket joints	IV.	Knee, help in locomotion		
Choos	e the correct answer from the	ne options	given below :		
(1) A	-I, B-III, C-II, D-IV		(2) A-II, B-III, C-I, D-IV		
(2) A	III B I C IV D II		(A) A IV B II C III D I		

(3) A-III, B-I, C-IV, D-II

(4) A-IV, B-II, C-III, D-I

Answer (3)

Sol. The correct answer is option no. (3) as

- Fibrous joints do not allow any movement. This type of joint is shown by the flat skull bones which fuse end-to-end with the help of dense fibrous connective tissues in the form of sutures.
- Cartilaginous joint is present between the adjacent vertebrae in the vertebral column and this permits limited movements.
- · Hinge joint is a type of synovial joint present in knee, help in locomotion
- Ball and socket joint is also a type of synovial joint present between humerus and pectoral girdle and allows rotational movement.

170. Match List I with List II:

 List I
 List II

 A. α –I antitrypsin
 I. Cotton bollworm

 B. Cry IAb
 II. ADA deficiency

 C. Cry IAc
 III. Emphysema

 D
 Enzyme replacement therapy
 IV Corn borer

Choose the correct answer form the options given below:

- (1) A-III, B-I, C-II, D-IV
- (2) A-III, B-IV, C-I, D-II
- (3) A-II, B-IV, C-I, D-III
- (4) A-II, B-I, C-IV, D-III

Answer (2)

Sol. The correct answer is option (2) as

α- I antitrypsin → Is used for treatment of Emphysema

Cry I Ab gene → Controls corn borer

Cry I Ac gene → Controls cotton bollworms

Enzyme replacement therapy → Can be used as treatment option in ADA deficiency.

171. Match List I with List II:

List I List II Centriole Axoneme I. A. Cartwheel pattern Cilia and flagella C. Crista III. Chromosome Satellite Mitochondria Choose the correct answer from the options given below: (1) A-IV, B-II, C-III, D-I (2) A-II, B-IV, C-I, D-III (3) A-II, B-I, C-IV, D-III (4) A-IV, B-III, C-II, D-I

Answer (3)

Sol. • Axoneme is seen in cilia and flagella

- · Centriole shows cartwheel appearance
- · Crista is found in mitochondria
- · Satellite is present in chromosomes

172. Following are the stages of pathway for conduction of an action potential through the heart

A. AV bundle

B. Purkinje fibres

C. AV node

D. Bundle branches

E. SA node

Choose the correct sequence of pathway from the options given below

(1) A-E-C-B-D

(2) B-D-E-C-A

(3) E-A-D-B-C

(4) E-C-A-D-B

Answer (4)

Sol. Correct answer is option (4) because the correct pathway of conduction of action potential is SA → AV node → AV bundle → Bundle branches → Purkinje fibres

173. Given below are two statements:

Statement I: The presence or absence of hymen is not a reliable indicator of virginity.

Statement II: The hymen is torn during the first coitus only.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false
- (2) Statement I is true but Statement II is false
- (3) Statement I is false but Statement II is true
- (4) Both Statement I and Statement II are true

Answer (2)

Sol. The correct answer is option no. (2) because the presence or absence of hymen is not a reliable indicator of virginity because hymen can also be broken by a sudden jolt, insertion of a vaginal tampon, active participation in some sports and in some women the hymen persists even after coitus.

174. Match List I with List II:

List I List II

A. Common cold

I. Plasmodium

B. Haemozoin

Typhoid

C. Widal test

III. Rhinoviruses

D. Allergy

IV. Dust mites

Choose the correct answer from the options given below:

(1) A-I, B-III, C-II, D-IV

(2) A-III, B-I, C-II, D-IV

(3) A-IV, B-II, C-III, D-I

(4) A-II, B-IV, C-III, D-I

Answer (2)

Sol. Correct answer is option (2) because

- · Common cold is caused by Rhinoviruses
- · Haemozoin is released in blood due to ruptured RBCs after Plasmodium infection.
- · Widal test is used to confirm the typhoid fever.
- · Allergy is caused due to dust mites.

	List I		List II
A.	Typhoid	l.	Fungus
В.	Leishmaniasis	II.	Nematode
C.	Ringworm	III.	Protozoa
D.	Filariasis	IV.	Bacteria

Choose the correct answer from the options given below:

- (1) A-IV, B-III, C-I, D-II
- (2) A-III, B-I, C-IV, D-II
- (3) A-II, B-IV, C-III, D-I
- (4) A-I, B-III, C-II, D-IV

Answer (1)

Sol. The correct answer is option (1) as

Typhoid - Caused by Salmonella typhimurium (Bacteria)

Leishmaniasis - Caused by protozoan i.e., Leishmania donovani

Ringworm - Caused by fungi belonging to the genera Microsporum, Trichophyton and Epidermophyton

Filariasis - Caused by Wuchereria bancrofti and Wuchereria malayi (Nematode)

176. Match List I with List II:

	List I		List II			
A.	Expiratory capacity	l.	Expiratory reserve volume + Tidal volume + Inspiratory reserve volume			
B.	Functional residual capacity	11.	Tidal volume + Expiratory reserve volume			
C.	Vital capacity	III.	Tidal volume + Inspiratory reserve volume			
D.	Inspiratory capacity	IV.	Expiratory reserve volume + Residual volume			

Choose the correct answer from the options given below:

(1) A-III, B-II, C-IV, D-I

(2) A-II, B-I, C-IV, D-III

(3) A-I, B-III, C-II, D-IV

(4) A-II, B-IV, C-I, D-III

Answer (4)

Sol. Expiratory capacity = Tidal volume + Expiratory reserve volume

Functional residual capacity = Expiratory reserve volume + Residual volume

Vital capacity = Expiratory reserve volume + Tidal volume + Inspiratory reserve volume

Inspiratory capacity = Tidal volume + Inspiratory reserve volume

- 177. Which one of the following factors will not affect the Hardy-Weinberg equilibrium?
 - (1) Genetic drift

(2) Gene migration

(3) Constant gene pool

(4) Genetic recombination

Answer (3)

Sol. The correct answer is option (3) as a constant gene pool will not disturb the Hardy-Weinberg equilibrium. Option (1), (2) & (4) will affect the equilibrium leading to evolution.

	List-I		List-II
A.	Lipase	l.	Peptide bond
B.	Nuclease	II.	Ester bond
C.	Protease	III.	Glycosidic bond
D.	Amylase	IV.	Phosphodiester bond

Choose the correct answer from the options given below:

(1) A-III, B-II, C-I, D-IV

(2) A-II, B-IV, C-I, D-III

(3) A-IV, B-I, C-III, D-II

(4) A-IV, B-II, C-III, D-I

Answer (2)

Sol. The correct answer is option (2) as

A.	Lipase	·	Digests ester bond found in lipids.
B.	Nuclease	-	Helps in digestion of phosphodiester bonds found in nucleic acids.
C.	Protease	-	Helps in digestion of peptide bond found in proteins.
D.	Amylase	-	Digests/breaks the glycosidic bonds found in carbohydrates i.e., digest starch into smaller molecules, ultimately yielding maltose, which in turn is cleaved into two glucose molecules by maltase.

179. Which of the following is not a component of Fallopian tube?

(1) Isthmus

(2) Infundibulum

(3) Ampulla

(4) Uterine fundus

Answer (4)

Sol. The correct answer is option (4) as uterine fundus is the upper, dome-shaped part of the uterus, above the opening of fallopian tubes.

- Option (1) is incorrect as isthmus is the last and narrow part of the oviduct that links to the uterus.
- · Option (2) is incorrect as infundibulum is the part of oviduct which is closer to the ovary.
- · Option (3) is incorrect as ampulla is the wider part of the oviduct.

180. Match List I with List II

List I		List II	
Non-medicated IUD	1.	Multiload 375	
Copper releasing IUD	11.	Progestogens	
Hormone releasing IUD	III.	Lippes loop	
Implants	IV.	LNG-20	
	Non-medicated IUD Copper releasing IUD Hormone releasing IUD	Non-medicated IUD I. Copper releasing IUD II. Hormone releasing IUD III.	Non-medicated IUD I. Multiload 375 Copper releasing IUD II. Progestogens Hormone releasing IUD III. Lippes loop

Choose the correct answer from the option given below:

(1) A-I, B-III, C-IV, D-II

(2) A-IV, B-I, C-II, D-III

(3) A-III, B-I, C-IV, D-II

(4) A-III, B-I, C-II, D-IV

Answer (3)

Sol. Correct answer is option (3) because

- Lippes loop is a non-medicated IUD.
- Multiload 375 is a copper releasing IUD.
- LNG -20 is a hormone releasing IUD.
- Progestogens are used as implants.

- 181. Which of the following is not a steroid hormone?
 - (1) Testosterone

(2) Progesterone

(3) Glucagon

(4) Cortisol

Answer (3)

Sol. The correct answer is option (3) as glucagon is a proteinaceous hormone secreted from pancreas. Options (1), (2) and (4) are not correct as they are steroid in nature.

182. The following diagram showing restriction sites in E. coli cloning vector pBR322. Find the role of 'X' and 'Y' genes:

- (1) The gene 'X' is responsible for controlling the copy number of the linked DNA and 'Y' for protein involved in the replication of Plasmid.
- (2) The gene 'X' is for protein involved in replication of Plasmid and 'Y' for resistance to antibiotics.
- (3) Gene 'X' is responsible for recognitions sites and 'Y' is responsible for antibiotic resistance.
- (4) The gene 'X' is responsible for resistance to antibiotics and 'Y' for protein involved in the replication of Plasmid.

Answer (1)

Sol. Correct answer is option (1), because

'X' in the given diagram is ori while 'Y' is rop.

'X' which is *ori* is responsible for controlling the copy number of the linked DNA and 'Y' which is *rop* codes for protein involved in the replication of plasmid.

Options (2), (3) and (4) are incorrect as 'X' and 'Y' are not related to these functions.

- 183. Which of the following is not a natural/traditional contraceptive method?
 - (1) Periodic abstinence

(2) Lactational amenorrhea

(3) Vaults

(4) Coitus interruptus

Answer (3)

Sol. The correct answer is option (3) as

Vault is a barrier method of contraception which is made of rubber that is inserted into the female reproductive tract to cover the cervix during the coitus.

- Option (1) is incorrect as periodic abstinence is also a natural method of contraception in which couples avoid coitus during the fertile period.
- Option (2) is incorrect as lactational amenorrhea is also a natural method of contraception which is based on the fact that ovulation and therefore the cycle do not occur during the period of intense lactational following parturition.
- Option (4) is incorrect as coitus interruptus is a natural method of contraception in which male partner withdraws his penis from the vagina just before ejaculation so as to avoid insemination.

184. Given below are some stages of human evolution.

Arrange them in correct sequence. (Past to Recent)

- A. Homo habilis
- B. Homo sapiens
- C. Homo neanderthalensis
- D. Homo erectus

Choose the correct sequence of human evolution from the options given below:

(1) B-A-D-C

(2) C-B-D-A

(3) A-D-C-B

(4) D-A-C-B

Answer (3)

Sol. Correct answer is option (3) because the correct sequence of stages of human evolution from past to recent is

 $Homo\ habilis
ightarrow Homo\ erectus
ightarrow Homo\ neanderthalensis
ightarrow Homo\ sapiens$

- 185. The "Ti plasmid" of Agrobacterium tumefaciens stands for
 - (1) Tumor independent plasmid
 - (2) Tumor inducing plasmid
 - (3) Temperature independent plasmid
 - (4) Tumour inhibiting plasmid

Answer (2)

Sol. The correct answer is option (2) as Ti plasmid of *Agrobacterium tumefaciens* is tumor inducing plasmid, containing T-DNA which causes tumor in several dicot plants.

Options (1), (3) and (4) are not correct.

SECTION-B

186. Match List I with List II:

	List I			List II	
Α.	RNA polymerase III		1.	snRNPs	
B.	Termination transcription	of	II.	Promotor	
C.	Splicing of Exons		III.	Rho factor	
D.	TATA box		IV.	SnRNAs, tRNA	

Choose the correct answer from the options given below:

- (1) A-III, B-II, C-IV, D-I
- (2) A-III, B-IV, C-I, D-II
- (3) A-IV, B-III, C-I, D-II
- (4) A-II, B-IV, C-I, D-III

Answer (3)

- Sol. In eukaryotes, RNA polymerase III codes for snRNAs, tRNA and 5s rRNA.
 - · Splicing of exons is performed by snRNPs.
 - TATA box is present in promoter region of transcription unit.
 - · Rho factor is responsible for termination of transcription.

- 187. Regarding catalytic cycle of an enzyme action, select the correct sequential steps:
 - Substrate enzyme complex formation.
 - B. Free enzyme ready to bind with another substrate.
 - C. Release of products.
 - D. Chemical bonds of the substrate broken.
 - E. Substrate binding to active site.

Choose the correct answer from the options given below:

(1) A, E, B, D, C

(2) B, A, C, D, E

(3) E, D, C, B, A

(4) E, A, D, C, B

Answer (4)

Sol. The correct answer is option (4) which is E, A, D, C, B.

The catalytic cycle of an enzyme action can be described in the following steps.

- (1) The binding of the substrate induces the enzyme to alter its shape, fitting more tightly around the substrate.
- (2) The active site of the enzyme, now in close proximity of the substrate breaks the chemical bonds of the substrate and the new enzyme-product complex is formed.
- (3) The enzyme releases the products of the reaction and the free enzyme is ready to bind to another molecule of the substrate and run through the catalytic cycle once again.
- (4) First, the substrate binds to the active site of the enzyme, fitting into the active site.

Options (1), (2) and (3) are incorrect as the steps mentioned are in the wrong sequence.

- 188. Choose the correct statement given below regarding juxta medullary nephron.
 - (1) Renal corpuscle of juxta medullary nephron lies in the outer portion of the renal medulla.
 - (2) Loop of Henle of juxta medullary nephron runs deep into medulla.
 - (3) Juxta medullary nephrons outnumber the cortical nephrons.
 - (4) Juxta medullary nephrons are located in the columns of Bertini.

Answer (2)

- **Sol.** The correct answer is option no, (2) because the length of loop of Henle of juxta medullary nephron is longer than the length of loop of Henle of cortical nephron and runs deep into medulla.
 - Option (1) is incorrect because renal corpuscle of juxta medullary nephron lies in inner cortical region.
 - Option (3) is incorrect as juxta medullary nephrons are lesser in number than cortical nephrons.
 - Option (4) is incorrect as juxta medullary nephron are not present in columns of Bertini.
- 189. Given below are two statements:

Statement I: Mitochondria and chloroplasts both double membranes bound organelles.

Statement II: Inner membrane of mitochondria is relatively less permeable, as compared chloroplast.

In the light of the above statements, choose the mis appropriate answer from the options given below:

- (1) Both Statement I and Statement II are incorrect.
- (2) Statement I is correct but Statement II is incorrect.
- (3) Statement I is incorrect but Statement II is correct.
- (4) Both Statement I and Statement II are correct.

Answer (2)

Sol. Both mitochondria and chloroplasts are double membrane bound cell organelles.

Transport of ions occurs across the inner membrane of mitochondria. The inner membrane of chloroplast is impermeable to ions and metabolites. Therefore, it is said that inner membrane of mitochondria is relatively more permeable to that of chloroplast.

190. Given below are two statements:

Statement I: Gause's competitive exclusion principle states that two closely related species competing for different resources cannot exist indefinitely.

Statement II: According to Gause's principle, during competition, the inferior will be eliminated. This may be true if resources are limiting.

In the light of the above statements, choose the correct answer from the options given below:

- (1) Both Statement I and Statement II are false.
- (2) Statement I is true but Statement II is false.
- (3) Statement I is false but Statement II is true.
- (4) Both Statement I and Statement II are true.

Answer (3)

- **Sol.** Gause's competitive exclusion principle states that two closely related species competing for the same resources cannot exist indefinitely and the competitively inferior one will be eliminated eventually. This may be true if resources are limiting.
- 191. The following are the statements about non-chordates:
 - A. Pharynx is perforated by gill slits.
 - B. Notochord is absent.
 - C. Central nervous system is dorsal.
 - D. Heart is dorsal if present.
 - E. Post anal tail is absent.

Choose the most appropriate answer from the options given below:

(1) A, B & D only

(2) B, D & E only

(3) B, C & D only

(4) A & C only

Answer (2)

- Sol. The correct answer is option no. (2) as the features of non-chordates among the given statements are:
 - B. Notochord is absent.
 - D. Heart is dorsal if present.
 - E. Post anal tail is absent.

Statements A and C are features of chordates.

Hence, option (2) is correct and options (1), (3) and (4) are incorrect.

192. Match List I with List II:

	List I		List II
Α.	Exophthalmic goiter	1.	Excess secretion of cortisol, moon face & hypergylcemia.
B.	Acromegaly	II.	Hypo-secretion of thyroid hormone and stunted growth.
C.	Cushing's syndrome	III.	Hyper secretion of thyroid hormone & protruding eye balls.
D.	Cretinism	IV.	Excessive secretion of growth hormone.

Choose the correct answer from the options given below:

(1) A-IV, B-II, C-I, D-III

(2) A-III, B-IV, C-II, D-I

(3) A-III, B-IV, C-I, D-II

(4) A-I, B-III, C-II, D-IV

Answer (3)

Sol. The correct answer is option no. (3) as

(A)	Exophthalmic goiter	(III)	Hyper secretion of thyroid hormone and characterized by protruding eye balls
(B)	Acromegaly	(IV)	Excessive secretion of growth hormone
(C)	Cushing's syndrome	(1)	Excess secretion of cortisol, moon face and hyperglycaemia
(D)	Cretinism	(II)	Hypo-secretion of thyroid hormone and characterized by stunted growth

193. Match List I with List II:

	List I	*	List II
Α.	Mesozoic Era	1.	Lower invertebrates
В.	Proterozoic Era	sH.	Fish & Amphibia
C.	Cenozoic Era	III.	Birds & Reptiles
D.	Paleozoic Era	IV.	Mammals

Choose the correct answer from the options given below:

(1) A-III, B-I, C-II, D-IV

(2) A-I, B-II, C-IV, D-III

(3) A-III, B-I, C-IV, D-II

(4) A-II, B-I, C-III, D-IV

Answer (3)

Sol. The correct answer is option no. (3)

- (A) Mesozoic Era
- (III)
- Birds & Reptiles

Fish & Amphibia

- (B) Proterozoic Era
- (1)
- Lower invertebrates

- (C) Cenozoic Era(D) Paleozoic Era
- (IV) (II)
- Mammals

194. Match List I with List II:

	List I		List II
Α.	Unicellular glandular epithelium	1.	Salivary glands
B.	Compound epithelium	11.	Pancreas
C.	Multicellular glandular epithelium	111.	Goblet cells of alimentary canal
D.	Endocrine glandular epithelium	IV.	Moist surface of buccal cavity

Choose the correct answer from the options given below:

(1) A-IV, B-III, C-I, D-II

(2) A-III, B-IV, C-I, D-II

(3) A-II, B-I, C-IV, D-III

(4) A-II, B-I, C-III, D-IV

Answer (2)

Sol. The correct answer is option no. (2) as

- A. Unicellular glandular epithelium
- (III) Goblet cells of alimentary canal
- B. Compound epithelium
- (IV) Lines moist surface of buccal cavity
- C. Multicellular glandular epithelium
- (I) Salivary glands
- D. Endocrine glandular epithelium
- (II) Pancreas

195. As per ABO blood grouping system, the blood group of father is B⁺, mother is A⁺ and child is O⁺. Their respective genotype can be

A. IBi/IAi/ii

B. IBIB/IAIA/ii

C. IAIB/iIA/IBi

D. IAi/IBi/IAi

E. ilB/ilA/IAIB

Choose the most appropriate answer from the options given below:

- (1) B only
- (2) C & B only
- (3) D & E only
- (4) A only

Answer (4)

Sol. Genotype of father with blood group B+ = IBi/iIB

Genotype of mother with blood group A+ = IAi/iIA

Genotype of child with blood group O+ = ii

Hence only 'A' is correct.

196. Match List I with List II related to digestive system of cockroach.

	List I		List II
Α.	The structures used for storing of food	1.	Gizzard
B.	Ring of 6-8 blind tubules at junction of foregut and midgut.	II.	Gastric Caeca
C.	Ring of 100-150 yellow coloured thin filaments at junction of midgut and hindgut.	Ш.	Malpighian tubules
D.	The structures used for grinding the food.	IV.	Crop

Choose the correct answer from the options given below:

(1) A-I, B-II, C-III, D-IV

(2) A-IV, B-III, C-II, D-I

(3) A-III, B-II, C-IV, D-I

(4) A-IV, B-II, C-III, D-I

Answer (4)

Sol. The correct answer is option no. (4) as

The structure used for griding the food particles	, -	Gizzard
The structure used for storing of food	1 	Crop
Ring of 6-8 blind tubules at junction of foregut and midgut which assists in secretion of digestive juices	-	Gastric Caeca
Ring of 100-150 yellow coloured thin filaments at junction of midgut and hindgut which assists in elimination of nitrogenous wastes	-	Malpighian tubules

197. Given below are two statements:

Statement I: Bone marrow is the main lymphoid organ where all blood cells including lymphocytes are produced.

Statement II: Both bone marrow and thymus provide micro environments for the development and maturation of T-lymphocytes.

In the light of above statements, choose the most appropriate answer from the options given below:

- (1) Both Statement I and Statement II are incorrect.
- (2) Statement I is correct but Statement II is incorrect.
- (3) Statement I is incorrect but Statement II is correct.
- (4) Both Statement I and Statement II are correct.

Answer (4)

Sol. The correct answer is option no. (4) as both statements I and II are correct.

In humans, the bone marrow is the main lymphoid organ where all blood cells including lymphocytes are produced.

Both bone-marrow and thymus provide micro-environments for the development and maturation of T-lymphocytes.

Options (1), (2) and (3) are incorrect.

198. Given below are two statements:

Statement I: The cerebral hemispheres are connected by nerve tract known as corpus callosum.

Statement II: The brain stem consists of the medulla oblongata, pons and cerebrum.

In the light of the above statements, choose the most appropriate answer from the options given below:

- (1) Both Statement I and Statement II are incorrect.
- (2) Statement I is correct but Statement II is incorrect.
- (3) Statement I is incorrect but Statement II is correct.
- (4) Both Statement I and Statement II are correct.

Answer (2)

Sol. The correct answer is option (2) as statement I is correct but statement II is incorrect.

In human brain, a deep cleft divides the cerebrum longitudinally into two halves, which are termed as the left and right cerebral hemispheres. The cerebral hemispheres are connected by a tract of nerve fibres called corpus callosum.

Three major regions make up the brain stem i.e. mid brain, pons and medulla oblongata.

Cerebrum is a part of forebrain which does not form brain stem.

Options (1), (3) and (4) are incorrect.

199. Identify the correct option (A), (B), (C), (D) with respect to spermatogenesis.

- (1) ICSH, Interstitial cells, Leydig cells, spermiogenesis.
- (2) FSH, Sertoli cells, Leydig cells, spermatogenesis.
- (3) ICSH, Leydig cells, Sertoli cells, spermatogenesis.
- (4) FSH, Leydig cells, Sertoli cells, spermiogenesis.

Answer (4)

Sol. The correct answer is option no. (4) as

Formation of spermatids

Spermiogenesis

- (A) is FSH which is a pituitary hormone.
- (B) is Leydig cells which are found in the interstitial space outside of the seminiferous tubules.
- (C) is Sertoli cells are found inside the seminiferous tubules.
- (D) is Spermiogenesis which is a process that helps in transformation of spermatids into spermatozoa.

200. Match List I with List II:

List I		List II
P wave	I.	Heart muscles are electrically silent.
QRS complex	11.	Depolarisation of ventricles.
T wave	111.	Depolarisation of atria.
T-P gap	IV.	Repolarisation of ventricles.
	P wave QRS complex T wave	P wave I. QRS complex II. T wave III.

Choose the correct answer from the options given below:

- (1) A-III, B-II, C-IV, D-I
- (2) A-II, B-III, C-I, D-IV
- (3) A-IV, B-II, C-I, D-III
- (4) A-I, B-III, C-IV, D-II

Answer (1)

Sol. The correct answer is option no. (1) as

A. P wave - III. Depolarisation of atria.

B. QRS complex - II. Depolarisation of ventricles.

C. T wave - IV. Repolarisation of ventricles.

D. T-P gap - I. Heart muscles are electrically silent.
