**J-316**

(E)

**MATHEMATICS & STATISTICS (88)  
(COMMERCE)**

Time : 3 Hrs.

(15 Pages)

Max. Marks : 80

**General Instructions :**

- (i) All questions are compulsory.
- (ii) There are six questions divided into two sections.
- (iii) Write answers of Section-I and Section-II in the same answer book.
- (iv) Use of logarithmic tables is allowed.  
Use of calculator is not allowed.
- (v) For L.P.P. and Time Series graph paper is not necessary. Only rough sketch of graph is expected.
- (vi) Start answer to each question on a new page.
- (vii) For each objective type of question (i.e. Q.1 and Q.4) only the first attempt will be considered for evaluation.

## SECTION - I

**Q. 1.**      **(A)** Select and write the correct answer of the following multiple choice type of questions (1 mark each) : **(6) [12]**

- (i) If  $p$  : He is intelligent  
           $q$  : He is strong

Then, symbolic form of statement "It is wrong that, he is intelligent or strong" is :

- (a)  $\sim p \vee \sim q$
- (b)  $\sim(p \wedge q)$
- (c)  $\sim(p \vee q)$
- (d)  $p \vee \sim q$

(ii)  $\int \left( x + \frac{1}{x} \right)^3 dx =$

- (a)  $\frac{1}{4} \left( x + \frac{1}{x} \right)^4 + c$
- (b)  $\frac{x^4}{4} + \frac{3x^2}{2} + 3 \log x - \frac{1}{2x^2} + c$
- (c)  $\frac{x^4}{4} + \frac{3x^2}{2} + 3 \log x + \frac{1}{x^2} + c$
- (d)  $(x - x^{-1})^3 + c$

(iii)  $\int_2^7 \frac{\sqrt{x}}{\sqrt{x} + \sqrt{9-x}} dx =$

- |                   |                   |
|-------------------|-------------------|
| (a) $\frac{7}{2}$ | (b) $\frac{5}{2}$ |
| (c) 7             | (d) 2             |

(iv) The area of the region bounded by the curve  $y = x^2$  and the line  $y = 4$  is

- (a)  $\frac{32}{3}$  sq. units      (b)  $\frac{64}{3}$  sq. units  
(c)  $\frac{16}{3}$  sq. units      (d) 64 sq. units

(v) The order and degree of the differential equation

$$\left(\frac{d^2y}{dx^2}\right)^2 + \left(\frac{dy}{dx}\right)^2 = a^x \text{ are } \underline{\hspace{2cm}} \text{ respectively.}$$

- (a) 1, 1      (b) 1, 2  
(c) 2, 2      (d) 2, 1

(vi) The integrating factor of the differential equation

$$\frac{dy}{dx} + \frac{y}{x} = x^3 - 3 \text{ is}$$

- (a)  $\log x$       (b)  $e^x$   
(c)  $\frac{1}{x}$       (d)  $x$

**(B)** State whether the following statements are true or false

(1 mark each) : (3)

(i) If  $A$  is a matrix and  $K$  is a constant, then

$$(KA)^T = KA^T$$

(ii)  $\int \log x \, dx = x \log x + x + c$

(iii) The differential equation obtained by eliminating

$$\text{arbitrary constants from } bx + ay = ab \text{ is } \frac{d^2y}{dx^2} = 0.$$

(C) Fill in the following blanks (1 mark each) : (3)

(i) The average revenue  $R_A$  is 50 and elasticity of demand  $\eta$  is 5, the marginal revenue  $R_M$  is \_\_\_\_\_.

(ii)  $\int e^x \left( \frac{1}{x} - \frac{1}{x^2} \right) dx = \text{_____} + c$

(iii) If  $f'(x) = x^2 + 5$  and  $f(0) = -1$  then  $f(x) = \text{_____}$ .

Q. 2. (A) Attempt any TWO of the following questions (3 marks each) : (6) [14]

(i) Write the converse, inverse and contrapositive of the statement "If a triangle is equilateral then it is equiangular".

(ii) Find  $x, y, z$  if  $\left\{ 5 \begin{bmatrix} 0 & 1 \\ 1 & 0 \\ 1 & 1 \end{bmatrix} - \begin{bmatrix} 2 & 1 \\ 3 & -2 \\ 1 & 3 \end{bmatrix} \right\} \begin{bmatrix} 2 \\ 1 \end{bmatrix} = \begin{bmatrix} x-1 \\ y+1 \\ 2z \end{bmatrix}$

(iii) Evaluate :  $\int \frac{1}{x(x^6+1)} dx$

(B) Attempt any TWO of the following questions (4 marks each) : (8)

(i) Solve the following equations by the method of inversion :

$$2x - y + z = 1$$

$$x + 2y + 3z = 8$$

$$3x + y - 4z = 1$$

(ii) Find MPC, MPS, APC and APS, if the expenditure  $E_c$  of a person with income  $I$  is given as :

$$E_c = (0.0003)I^2 + (0.075)I; \text{ when } I = 1000$$

(iii) Evaluate :  $\int_1^2 \frac{dx}{x^2 + 6x + 5}$

**Q. 3. (A)** Attempt any TWO of the following questions (3 marks each) : (6) [14]

- (i) Find  $\frac{dy}{dx}$  if  $y = (x)^x + (a)^x$
- (ii) Find the area of the region bounded by the parabola  $y^2 = 25x$  and the line  $x = 5$ .
- (iii) Find the differential equation by eliminating arbitrary constants from the relation  $y = Ae^{3x} + Be^{-3x}$ .

**(B)** Attempt any ONE of the following questions (4 marks each): (4)

- (i) Using the truth table, verify  $p \vee (q \wedge r) \equiv (p \vee q) \wedge (p \vee r)$
- (ii) If  $x = \frac{4t}{1+t^2}$ ,  $y = 3\left(\frac{1-t^2}{1+t^2}\right)$ , then show that  $\frac{dy}{dx} = \frac{-9x}{4y}$ .

**(C)** Attempt any ONE of the following questions (Activity) (4 marks each): (4)

- (i) Divide the number 84 into two parts such that the product of one part and square of the other is maximum.

Solution :

Let one part be  $x$  then the other part will be  $84 - x$ .

$$\therefore f(x) = \boxed{\phantom{000}}$$

$$\therefore f'(x) = 168x - 3x^2$$

For extreme values  $f'(x) = 0$

$$168x - 3x^2 = 0$$

$$\therefore 3x(56 - x) = 0$$

$$\therefore x = \boxed{\phantom{00}} \text{ OR } \boxed{\phantom{00}}$$

$$f''(x) = 168 - 6x$$

If  $x = 0, f''(0) = 168 - 6(0) = 168 > 0$

$\therefore$  function attains minimum at  $x = 0$

If  $x = 56, f''(56) = \boxed{\phantom{00}} < 0$

$\therefore$  function attains maximum at  $x = 56$

$\therefore$  Two parts of 84 are  $\boxed{\phantom{00}}$  and  $\boxed{\phantom{00}}$

(ii) Solve the following differential equation

$$(x^2 - yx^2)dy + (y^2 + xy^2)dx = 0$$

*Solution :*

Separating the variables, the given equation can be written as :

$$\boxed{\phantom{00}} dy + \boxed{\phantom{00}} dx = 0$$

$$\therefore \left(y^{-2} - \frac{1}{y}\right)dy + \left(x^{-2} + \frac{1}{x}\right)dx = 0$$

$$\boxed{\phantom{00}} dy - \frac{1}{y} dy + x^{-2} dx + \boxed{\phantom{00}} dx = 0$$

Integrating we get,

$$\int y^{-2} dy - \int \frac{1}{y} dy + \int x^{-2} dx + \int \frac{1}{x} dx = 0$$

$$\therefore \frac{y^{-1}}{-1} - \boxed{\phantom{00}} + \frac{x^{-1}}{-1} + \boxed{\phantom{00}} = c$$

$$-\frac{1}{y} - \frac{1}{x} + \log x - \log y = c$$

$$\log x - \log y = \boxed{\phantom{00}} + c$$

is the required solution.

## SECTION - II

**Q. 4. (A)** Select and write the correct answer of the following multiple choice type of questions (1 mark each) : **(6) [12]**

- (i) An agent who gives guarantee to his principal that the party will pay the sale price of goods is called –
  - (a) Auctioneer
  - (b) Del credere agent
  - (c) Factor
  - (d) Broker
- (ii) In an ordinary annuity, payments or receipts occur at
  - (a) Beginning of each period
  - (b) End of each period
  - (c) Mid of each period
  - (d) Quarterly basis
- (iii) Moving averages are useful in identifying
  - (a) Seasonal component
  - (b) Irregular component
  - (c) Trend component
  - (d) Cyclical component

(iv) If  $P_{01}(L)=90$  and  $P_{01}(P)=40$ , then  $P_{01}(D-B)$  is

\_\_\_\_\_.

- (a) 65
  - (b) 50
  - (c) 25
  - (d) 130
- (v) The objective of an assignment problem is to assign
- (a) Number of jobs to equal number of persons at maximum cost
  - (b) Number of jobs to equal number of persons at minimum cost
  - (c) Only to maximize the cost
  - (d) Only to minimize the cost
- (vi) The expected value of the sum of two numbers obtained when two fair dice are rolled is \_\_\_\_\_.
- (a) 5
  - (b) 6
  - (c) 7
  - (d) 8

**(B)** State whether the following statements are true or false  
(1 mark each) : (3)

- (i) If  $b_{yx} + b_{xy} = 1.30$  and  $r = 0.75$  then the given data is inconsistent.
- (ii) Cyclic variation can occur several times in a year.
- (iii) Cost of living index number is used in calculating purchasing power of money.

(C) Fill in the following blanks (1 mark each) : (3)

- (i) The amount paid to the holder of the bill after deducting banker's discount is known as \_\_\_\_\_.
- (ii) The simplest method of measuring trend of time series is \_\_\_\_\_.
- (iii) Quantity index number by weighted aggregate method is given by \_\_\_\_\_.

Q. 5. (A) Attempt any TWO of the following questions [14]

(3 marks each) : (6)

- (i) Compute the appropriate regression equation for the following data :

$X$	1	2	3	4	5
$Y$	5	7	9	11	13

$X$  is the independent variable and  $Y$  is the dependent variable.

- (ii) A company makes concrete bricks made up of cement and sand. The weight of a concrete brick has to be at least 5 kg. Cement costs ₹ 20 per kg and sand costs ₹ 6 per kg. Strength consideration dictate that a concrete brick should contain minimum 4 kg of cement and not more than 2 kg of sand. Formulate the L.P.P. for the cost to be minimum.
- (iii) Find the mean of number of heads in three tosses of a fair coin.

(B) Attempt any TWO of the following questions (4 marks each) : (8)

(i) Obtain the trend value for the following data using 4-yearly centered moving averages :

Years	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985
Index	0	2	3	3	2	4	5	6	7	10

(ii) Find the sequence that minimizes the total elapsed time to complete the following jobs in the order AB. Find the total elapsed time and idle time for machine B :

Jobs	I	II	III	IV	V	VI	VII
Machine A	7	16	19	10	14	15	5
Machine B	12	14	14	10	16	5	7

(iii) Five cards are drawn successively with replacement from a well shuffled deck of 52 cards. Find the probability that :

- (a) all the five cards are spades
- (b) only 3 cards are spades.

Q. 6. (A) Attempt any TWO of the following questions (3 marks each) : (6) [14]

(i) A house valued at ₹ 8,00,000 is insured at 75% of its value. If the rate of premium is 0.80%, find the premium paid by the owner of the house. If agent's

commission is 9% of the premium, find agent's commission.

- (ii) Solve the following L.P.P. by graphical method.

Maximize :  $z = 4x + 6y$

Subject to :  $3x + 2y \leq 12$

$x + y \geq 4$

$x, y \geq 0$

- (iii) Defects on plywood sheet occur at random with the average of one defect per 50 sq.ft. Find the probability that such a sheet has :

(a) no defect

(b) at least one defect

(use  $e^{-1} = 0.3678$ )

- (B)** Attempt any ONE of the following questions (4 marks each) : (4)

- (i) The equations of two regression lines are  $10x - 4y = 80$  and  $10y - 9x = -40$ . Find

(a)  $\bar{x}$  and  $\bar{y}$

(b)  $b_{YX}$  and  $b_{XY}$

(c)  $r$

(d) If  $\text{var}(Y) = 36$ , obtain  $\text{var}(X)$ .

- (ii) Find  $x$  if the cost of living index is 150 :

Group	Food	Clothing	Fuel and electricity	House Rent	Miscellaneous
I	180	120	300	100	160
W	4	5	6	$x$	3

(C) Attempt any ONE of the following questions (Activity)  
(4 marks each) : (4)

- (i) A bill of ₹ 18,000 was discounted for ₹ 17,568 at a bank on 25th October 2017. If the rate of interest was 12% p.a. what is the legal due date?

Solution :

Given  $SD = 18,000$ ;  $CV = 17,568$

$$r = 12\% \text{ p.a.}$$

$$\begin{aligned} \text{Now, } BD &= \boxed{\phantom{000}} \\ &= 18,000 - 17,568 \\ &= ₹ 432 \end{aligned}$$

$$\text{Also } BD = \boxed{\phantom{000}}$$

$$\therefore 432 = \frac{18,000 \times n \times 12}{100}$$

$$n = \frac{432 \times 100}{18,000 \times 12}$$

$$n = \frac{1}{5} \text{ years} = \boxed{\phantom{000}} \text{ days}$$

The period for which the discount is deducted is 73 days, which is counted from the date of discounting i.e. 25<sup>th</sup> October 2017 :

October	November	December	January	Total
6	30	31	6	73

Hence legal due date is  $\boxed{\phantom{000}}$

- (ii) Solve the following assignment problem for minimization :

	I	II	III	IV	V
1	18	24	19	20	23
2	19	21	20	18	22
3	22	23	20	21	23
4	20	18	21	19	19
5	18	22	23	22	21

Solution :

Step-I

Subtract the smallest element of each row from every element of that row

$$\begin{array}{c}
 \begin{array}{c} \text{I} \quad \text{II} \quad \text{III} \quad \text{IV} \quad \text{V} \\
 \begin{array}{c} 1 \\ 2 \\ 3 \\ 4 \\ 5 \end{array} \left[ \begin{array}{ccccc} 0 & 6 & 1 & 2 & 4 \\ 1 & 3 & 2 & 0 & 3 \\ 2 & 3 & 0 & 1 & 3 \\ 2 & 0 & 3 & 1 & 1 \\ 0 & 4 & 5 & 4 & 3 \end{array} \right]
 \end{array}
 \end{array}$$

Step-II

Subtract the smallest element of each column from every element of that column :

$$\begin{array}{c}
 \begin{array}{c} \text{I} \quad \text{II} \quad \text{III} \quad \text{IV} \quad \text{V} \\
 \begin{array}{c} 1 \\ 2 \\ 3 \\ 4 \\ 5 \end{array} \left[ \begin{array}{ccccc} 0 & 6 & 1 & 2 & 4 \\ 1 & 3 & 2 & 0 & 3 \\ 2 & 3 & 0 & 1 & 2 \\ 2 & 0 & 3 & 1 & 0 \\ 0 & 4 & 5 & 4 & 2 \end{array} \right]
 \end{array}
 \end{array}$$

### Step-III

Draw minimum number of lines covering all zeros.

$$\begin{array}{c}
 \text{I} \quad \text{II} \quad \text{III} \quad \text{IV} \quad \text{V} \\
 \begin{array}{c}
 1 \left[ \begin{array}{ccccc} 0 & 6 & 1 & 2 & 4 \end{array} \right] \\
 2 \left[ \begin{array}{ccccc} \cancel{1} & \cancel{3} & \cancel{2} & \cancel{0} & \cancel{3} \end{array} \right] \\
 3 \left[ \begin{array}{ccccc} \cancel{2} & \cancel{3} & \cancel{0} & \cancel{1} & \cancel{2} \end{array} \right] \\
 4 \left[ \begin{array}{ccccc} \cancel{2} & \cancel{0} & \cancel{3} & \cancel{1} & \cancel{0} \end{array} \right] \\
 5 \left[ \begin{array}{ccccc} 0 & 4 & 5 & 4 & 2 \end{array} \right]
 \end{array}
 \end{array}$$

Here minimum number of lines (4) < order of matrix (5)

### Step-IV

The smallest uncovered element is 1, which is to be subtracted from all uncovered elements and add it to all elements which lie at the intersection of two lines :

$$\begin{array}{c}
 \text{I} \quad \text{II} \quad \text{III} \quad \text{IV} \quad \text{V} \\
 \begin{array}{c}
 1 \left[ \begin{array}{ccccc} 0 & 5 & 0 & \square & 3 \end{array} \right] \\
 2 \left[ \begin{array}{ccccc} 2 & 3 & 2 & 0 & 3 \end{array} \right] \\
 3 \left[ \begin{array}{ccccc} 3 & 3 & 0 & \square & 2 \end{array} \right] \\
 4 \left[ \begin{array}{ccccc} 3 & 0 & 3 & 1 & 0 \end{array} \right] \\
 5 \left[ \begin{array}{ccccc} 0 & 3 & 4 & 3 & \square \end{array} \right]
 \end{array}
 \end{array}$$

### Step-V

Draw minimum number of lines that are required to cover all zeros :

$$\begin{array}{c}
 \text{I} \quad \text{II} \quad \text{III} \quad \text{IV} \quad \text{V} \\
 \begin{array}{c}
 1 \left[ \begin{array}{ccccc} 0 & 5 & 0 & 1 & 3 \end{array} \right] \\
 2 \left[ \begin{array}{ccccc} \cancel{2} & \cancel{3} & \cancel{2} & \cancel{0} & \cancel{3} \end{array} \right] \\
 3 \left[ \begin{array}{ccccc} 3 & 3 & 0 & 1 & 2 \end{array} \right] \\
 4 \left[ \begin{array}{ccccc} \cancel{3} & \cancel{0} & \cancel{3} & \cancel{1} & \cancel{0} \end{array} \right] \\
 5 \left[ \begin{array}{ccccc} 0 & 3 & 4 & 3 & 1 \end{array} \right]
 \end{array}
 \end{array}$$

Here minimum number of lines  $\neq$  order of matrix.

### Step-VI

Find the smallest uncovered element (1). Subtract this number from all uncovered elements and add it to all elements which lie at the intersection of two lines :

$$\begin{array}{c}
 \begin{array}{ccccc}
 & \text{I} & \text{II} & \text{III} & \text{IV} & \text{V} \\
 \begin{array}{c} 1 \\ 2 \\ 3 \\ 4 \\ 5 \end{array} & \left[ \begin{array}{ccccc}
 \cancel{0} & \cancel{4} & \cancel{0} & \cancel{0} & \cancel{2} \\
 3 & 3 & 3 & 0 & 3 \\
 3 & \square & 0 & 0 & \square \\
 \cancel{4} & \cancel{0} & \cancel{4} & \cancel{0} & \cancel{0} \\
 \cancel{0} & \cancel{2} & \cancel{4} & \cancel{2} & \cancel{0}
 \end{array} \right]
 \end{array}
 \end{array}$$

Now minimum number of lines = order of matrix.

The optimal assignment can be made.

Optimal solution is

$1 \rightarrow \text{I}$

$2 \rightarrow \text{IV}$

$3 \rightarrow \square$

$4 \rightarrow \square$

$5 \rightarrow \text{V}$

Minimum value =  $\square$
